The forty-first Exhibition of this corporation consists of 1,038 paintings and drawings, and fifteen small pieces of sculpture. Amongst many indifferent, not to say bad pictures, will be found a number of interesting works. We shall name but a few of them. The place of honour in the chief room is occupied by (158) "The Beaching of the Life-boat," by T. Roberts, and, on the whole, worthily. The boat contains a rescued crew. In colour it is tame; but varied emotions are cleverly expressed. It should be engraved and circulated by the active institution the name of which the boat bears a little too prominently. (135) "Private and Confidential," J. Collinson, is a charming little picture of a mother and child at play. (259) "Return of the Prodigal Son," J. Tissot, a fifteenth century representation of the event, is too reflective of Henry Leys, the well-known Belgian painter, and is open to any amount of criticism. Nevertheless, it is the cleverest picture in the gallery, and one before which the thinker will stand longest. (294) "A Family Group," J. Hayllar, is at the same time a picture, and a charming one too. Mr. Denby's Sacrifice of the Son of the King of Moab (372), notwithstanding its strange anachronism, shows thought and gives promise. Mr. Bromley's half-dozen rural and domestic scenes, *e.g.* (72), "The Photographer," and (325) "A Nest of Little Ones," found immediate purchasers, and deserved to do so. Mr. Cobbett has several agreeable pictures: we wonder, by the way, in what field such a "Gleaner" as he has painted (495) is to be seen? Amongst other figure pieces marked are (58) "A Sanatory Commission," G. A. Holmes; (76) "An Eye to the Future," W. Helmsley; (345) "War Tidings," by Miss Edwards; and a Portrait by Mrs. Croudace.

Mr. Hurlstone, president of the Society, exhibits pictures in his well-known manner.

Foremost amongst the landscapes stands (106) "Harvesting in Surrey," G. Cole, a stormy sunset very powerfully depicted. The same artist has some charming landscapes in water-colours. 182, W. W. Gosling, illustrates

> —— "An English home—gray twilight pour'd
> On dewy pastures, dewy trees."

(231) "Shades of Evening" is one of the best of H. J. Boddington's landscapes. Amongst the other striking landscapes may be placed "Summer Morning on the Thames" (27), C. Smith; "Cottages at Lyminge, East Kent" (53), J. J. Wilson; (133) "The Saw-mill on the Camlaw, North Wales, J. P. Pettitt; (562) "Sunset from the East Cliff, Hastings," A. Clint; and some by Syer, Tennant, Pyne, Wainewright, and others.

CONVERSAZIONE OF THE IRISH INSTITUTE OF ARCHITECTS.

On Tuesday evening, the 29th ult., a *conversazione* was held by the President, Mr. Lanyon, and members of the Institute of the Architects of Ireland. There was a considerable collection of works of art, including a number of architectural drawings; the first and second selected designs for Carlisle Bridge, and others. The Lord-Lieutenant favoured the Institute with his presence, and a military band contributed to the attractions of the evening.

THE RESERVOIR QUESTION.

Insecurity of the Pythorn Reservoir, near Rochdale.—A number of property holders have attended at the Rochdale police-court, requesting that the magistrates would communicate with the authorities at the Home Office, with a view of getting some eminent engineer to examine the Pythorn reservoir, which, they represent, is in a very dangerous condition. During a short conversation it was stated that there had, a short time ago, been a "slip" in the embankment when the reservoir was only a quarter full, and that the embankment is now sinking, on an average, 2 inches a week. The magistrates promised to communicate with the authorities at the Home Office.

Security of the Thornton Reservoir, near Leicester.—At a recent meeting of the Leicester council, it was stated by Mr. E. S. Ellis, that most of the directors of the Waterworks Company had visited the reservoir at Thornton, accompanied by Mr. Hawksley, C.E., and that they were perfectly satisfied with the appearance of the works in every possible way. They found them substantial and sound, and there was not the slightest reason for apprehension of danger, either from the water-works or the embankment. A brief report had already been received from Mr. Hawksley, which says:—"I have this day made an examination of the works of the Thornton reservoir, which is now full to the top of the weir, and have the pleasure to report that all the constructions are sound, water-tight, perfect, and safe."

The Sheffield Inundation.—From calculations that have been made, it would seem that the flood reached, and injured more or less seriously, not fewer than 4,000 houses. In the district of Neepsend alone, out of 600 houses, 400 are now empty. The total damage to property, from the scene of the accident to a point below the borough of Sheffield, where the destructive power of the flood may be said to have ended, is calculated at 250,000*l.*; and this, of course, is exclusive of tenants' and proprietors' claims, which will amount to an enormous sum. The relief fund amounted last week to about 36,000*l.*

COMPETITIONS.

New Public Offices and Gaol, Wigan.—At a special meeting of the council, held last week, the various plans which had been received in response to an advertisement, offering premiums of 80*l.*, 40*l.*, and 20*l.* for the most suitable designs, were inspected. The first was unanimously awarded to Messrs. Nuttall & Cook, Lord-street, Liverpool; the second to Mr. J. W. Best, Bolton; and the third to Mr. J. Harrison, Chester. Messrs. Nuttall & Cook have been appointed architects for the new buildings, which are estimated to cost about 12,000*l.*

Louth.—Trinity Church.—From the seventeen designs sent in for the rebuilding of Trinity Church, that of Messrs. Rogers & Marsden, Louth, has been selected.

Museum, Kensington.—We understand that thirty-nine sets of designs have been sent, in reply to the Government advertisement, and are now being arranged. Mr. Tite and Mr. Fergusson will, we believe, form part of the committee named to adjudicate upon them.

TELEGRAPHIC PROGRESS.

At an extraordinary general meeting of the shareholders in the Atlantic Telegraph Company, the chairman said that the directors now came to the proprietary to ask its sanction to lay the first portion of the new telegraph. He then stated that "the cable was heavier in air than had been expected," but "it would be lighter when submerged, and there was a corresponding gain of conductiveness, insulation, &c., which would more than compensate for the extra cost. The price was to be 700,000*l.* This was to be paid the contractors, not all at once, but in the following manner: 350,000*l.* in cash, 250,000*l.* in guaranteed 8 per cent. shares, and 100,000*l.* in debentures." The directors proposed to create 6,857 shares of 20*l.* each, representing a par value of 137,140*l.* If they were, as he was most sanguine they would be, perfectly successful, and the cable was properly submerged and in full working, they would earn by the telegraph an immense amount of money,—an amount unprecedented; and in that contingency, but not before the success of the company was estab-

shed, they were to pay the contractors, Messrs. Glass, Elliott, & Co., 137,000*l.* by way of bonus, which sum, by the terms of the contract, that firm were to take in unguaranteed shares of the Old company. He was not at liberty to divulge more at present, but asked them to have confidence in their directors. Resolutions were then passed to the effect that the contract with Messrs. Glass, Elliot, & Co. be approved of, and that the issue of shares to the contractors upon the completion of their contract be authorized, and the directors empowered to issue 100,000*l.* in debentures.——It has been decided in the Court of Common Pleas, in the case of the Submarine Telegraph Company *v.* Dixon, that a shipowner is liable for an injury done to a submarine telegraph cable by his anchor, as it will be assumed that he knows of the existence and position of the cable. He is bound to navigate with such care and skill as to avoid injuring these cables.

STATUES AND MONUMENTS.

The Prince Consort's Statue by Woolner.—The statue to be presented by the citizens of Oxford to the University, for the new Museum at Oxford, has been executed. The sculptor has represented the Prince as a young man, and in the ordinary walking or riding dress of an English gentleman, although without the hat. The figure is some inches above life size: the attitude is not more exposed than sculptors generally give to their portrait-statues, the head being turned a little away from the front, the right hand resting on the hip, and the left allowed to fall by the side, holding the gloves. The only accessory in the shape of drapery is the short riding cloak, which is thrown back on one shoulder. This statue, like the others which have already been placed in the Museum court, is carved in stone; and being one of the choicest blocks that could be selected from the Caen quarries, the colour is agreeable. It may here be noted that the Queen presented five of the statues which now ornament the Museum, viz., those of Bacon (by Mr. Woolner), Galileo, Newton, Leibnitz, and Oersted.

The Combermere Memorial.—At a meeting of the subscribers to the fund (about 4,500*l.*) for erecting a memorial of Field-Marshal Viscount Combermere, K.C.B., held at Chester Castle, it has been determined that the memorial shall be an equestrian statue; that Baron Marochetti shall be requested to execute it; and that it shall be erected in Chester. Matters of detail are to be left to the members of the Combermere family. It is understood that Lord Combermere himself wishes Baron Marochetti to be employed if the memorial be in the form of a statue, and that he would prefer it to be placed in Chester rather than on his own estate. The Viscount, it seems, has now worn the British uniform for no less than seventy-four years.

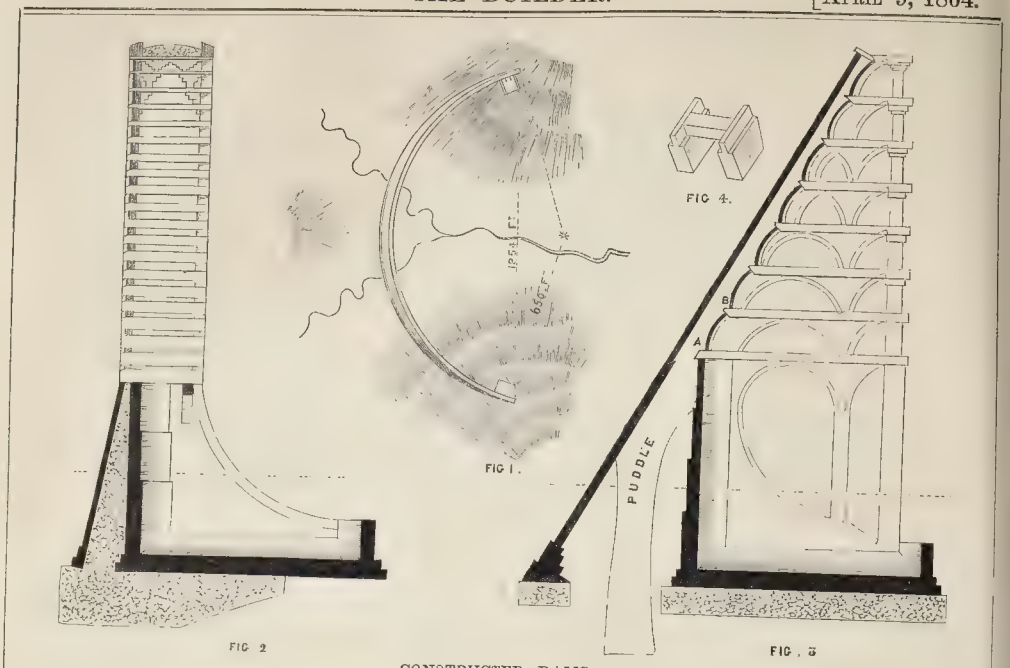
Memorial of the late Sir Tatton Sykes.—A meeting of the admirers of the late Sir Tatton Sykes, of Sledmere, has been held at Driffield, to consider the desirableness of providing a memorial of the deceased baronet. There was a numerous and influential attendance. Lord Hotham, M.P., presided. Much of the improvement in the agriculture of the East Riding is traced to the efforts of Sir Tatton Sykes, who promoted its interests by every means in his power. The meeting has appointed a committee to collect subscriptions and to consider and report to a future meeting as to the best means of carrying out the purposes of the meeting. If an obelisk should be resolved upon as the form of the memorial, it has been suggested that the site should be Garton Hill, about half way between Driffield and Sledmere Hall, an eminence from which it would be seen for many miles. Another suggestion is, that the memorial should take the form of an equestrian statue, at the entrance to Sledmere Park. The almshouse project is met by the remark that, thanks to Sir Tatton, there are no decayed farmers on his estate. It is hoped that a fund amounting in the whole to 3,000*l.* may be raised. A third of that sum has already been contributed by the tenantry on the Sledmere estate.

Memorial of the late Right Hon. James Wilson. A movement is in progress at Hawick, the native town of the late Chancellor of India, for the erection there of a statue to his memory. A committee has been appointed with that view at a preliminary meeting held at Hawick.

Memorial of the late William Dyce, R.A.—At a vestry meeting held at Streatham, the following resolution has been unanimously passed:—"That, regard being had not only to the great abilities of the late William Dyce, R.A., as an artist, musician, and author, but also to the services rendered by him to this parish (in which he passed the last years of his life) in his position as churchwarden, and otherwise, a monumental brass be erected to his memory in the parish church."

Mural Monument at Alne.—The parish church of Alne, in the North Riding of Yorkshire, has recently received an embellishment by the erection of a mural monument to the memory of the late Mr. E. S. Strangwayes. It is in the Early Decorated style, carved and foliated, and is composed chiefly of Caen stone, with columns in Italian marble. The tablet is of Carrara statuary marble, and the ground of polished black marble. Messrs. Skelton & Son, of York, were the sculptors.

CONSTRUCTED DAMS *versus* HEAPS.



It seems universally taken for granted that the deluges suspended over each northern valley and its helpless crowds must hang on the invisible qualities of mounds of earth and clay; that "civilized" economy utterly forbids any safer fence, even in the district of the very finest quarries; or else that, as the pressure of a given store of rain water is of all forces the most rigorously limited, calculable, quiet, and tamely regular, it would be too uninteresting to deal with, if we could not manage to oppose in the other scale the most changeable, vague, least ascertainable or definable of all conceivable resistances, the glorious uncertainty of a heap of made ground, neither carried there on women's heads, trodden inch by inch, nor baked with a single month of tropic drought, even if we have to bring Hindoo engineers to instruct us in its confection. No one has settled within fifty per cent. what amount of any given quality of soil must be heaped up to confine any force, known to a pound, with tolerable safety, provided each to a pound, with tolerable safety, provided each foot of its unexaminable bowels be duly compacted, rat-proof, &c.; but it is assumed as beyond question that any safer work would involve not only contrivance approaching a beaver's, but an amount of handled building approaching a tenth or twelfth of the mass of these heaps themselves. Thus the *Times*, in commenting on the first absurd report of the Bradfield dam's thinness, laid down the law that even "solid masonry," to withstand 90 feet of water, should have had a base of 54 feet. It might be so on one supposition, that not a grain more art or science or instinct is to enter into the piling up one mass than the other, but both to employ the dead weight, and no other quality of any portion of their material, and to carry out in its utmost purity the grand principle of the new engineer-craft, "*Nothing by mind that can be done by matter.*" But if you allow me a page, I propose to show that the question of relative economy between a structure and a heap is not quite so certain, if we might for once infringe that principle by some slight return towards those of elder art, animal or human—at least that *three-fourths* of the solid masonry above indicated would be utter surplusage.

Of course, were the problem—what it never can be—to wall up 90 feet of water over or in the midst of a flat; to surround, for instance a reservoir of that height on a Middlesex field, the enclosure must do all by its mere gravity, or, at least, carry all the pressure to the ground below, but without even then requiring anything like the mass deduced in the books whence this 54 feet was copied, because nowhere that an atom of structural art remained,—*i. e.*, nowhere till the great new art of "per-centage-on-the-outlay"-paid designing had arisen, would any thus confound wall and buttress in one inorganic lump, on the narrowest base it could be restricted to. The whole thing's office is that of a shelf, which is to the wall what this is to the ground, and no one fancies the shelf most economic of material to bear a given weight, is one without brackets, all the material that might form them being gathered up into one continuous addition to the shelf's thickness. But the whole case, as I said, is imaginary. We never want to uphold any 90-feet mass of water over a plain, but only in some such glen as that of the Loxley, and at a part where it is suggested by a natural contraction or funnel, such as usually occurs just below a confluence. For all buttressing, then, we have the two approaching hill shoulders, reared ready to hand, well settled, heavier and higher that our whole proposed work. Is it rational to leave these totally unemployed, and require the chief part of our material brought and piled up into most inferior artificial buttresses or buttress at their very toes? Is it quite dignified in the presence of the bees and ants, and in the same world with the beavers and all building creatures, none of whom, except per-centage engineers, employ *any* of their material in this manner, but always make use of all such naturally provided butments? The present engineers' notion seems to be, that because it is *further* from most points of their dam to either hill than to the ground below, therefore it must be cheapest to carry all pressures down to the latter, especially as the referring any to the hills would involve bending our dam from the straight plan into a curve, which, in the extreme case of its being a semicircle, would be half as long again. Nevertheless, let us compare first with the economy of their method of referring *all* the pressure to the ground alone, the exactly opposite extreme of referring it *all* to the hills, even that of the lowest layer of water against the dam's ground-line.

Now, be it observed, that the pressure which swept away the Bradfield artificial mountain, has been very well resisted by an egg-shell or a nautilus. These delicate specimens of nature's limestone vaulting will bear external pressures equivalent to more than this 90 feet of water. Vaults of one identical material will bear equal fluid pressures when their thicknesses are the same fraction of their radii of curvature; so that if the Yorkshire people had, among their splendid stones, any ascertained to have a cohesion not inferior to egg-shell, they might, by mere measurement of a shell, have ascertained the quantity of such stone required to dam up safely any of their reservoirs. Of all the formulæ the mathematicians have yet deduced for constructors, the only one really having a bearing on rational work is that giving the relation between a material's absolute resistance to crushing, and that of a hollow cylinder of it: as the cylinder's radius to its thickness, so is the pressure bearable by a block of the material, of any given area, to the pressure sustainable on every such area of the cylinder's exterior. Bolsover stone, in the Westminster Palace experiments,* was loaded with successive increments of 2·53 cwt. on 4 square inches, or 70¾ lb. per inch, only began to be injured by the 70th of these, and was only crushed by the 117th, or 8,277 lb. per inch. Take as the limit to be practically allowed, two-thirds of the greatest load borne without injury, *i.e.* ⅔ of 69 × 70¾, or 46 × 70¾ = 3253.

A 90 feet column of water can only exert a pressure of 40 lb. per inch, and to bear this, the thickness of our artificial eggshell (at its base, where alone the pressure has the above magnitude) need only be to its radius as 40 to 3253, or as 1 to 81¼. The extremities of the Bradfield dam, then, being 1254 feet apart, it appears that a wall of say 650 feet radius (fig. 1) in this stone, would have been perfectly safe if only 8 feet thick (instead of the *Times* writer's 54 feet) at the lowest part of the ground line, and diminishing, by a straight batter, to as little as we please at the top. Omitting what would be added to each wall alike for the convenience of a way on the top, the quantities of stone in their two highest sections are 360 superficial feet in the circular wall, against 2,550 in the straight. Their whole solidities then, supposing each retained this section throughout its length (or that the valley were a flat between precipices) would be as 1 to nearly 5, but of course the full height of each is confined to its middle, and the chief part of their material is in the deep central portion, that would be very little longer in the semicircle than the diameter. Moreover, I have supposed at once the longest curve that would ever be adopted, and that having least curvature at the expensive central part. It might seem, indeed, that, as the pressure is everywhere perpendicular to the curve, and rigorously equal at all points of any one level, no deviation from a simple circular arc, and that of the shortest radius, and, consequently, most approaching a complete semicircle that the hills afford butment for is allowable; any other curve or combination being weakest wherever the radius is longest. But, in fact, the varying height of the wall, in every case except the flat valley above supposed, would make it worth while to vary the curvature, though involving an increase of thickness wherever the radius increases; and, where the bottom is narrow compared with the slopes,

* Parl. Report on Stones, 1839, Table D, cols. 8 and 9.

CONSTRUCTED DAMS.

a plan approaching a hyperbola would be best for the sake of the diminished radius of middle curvature, and hence diminished thickness needed in the short lower courses.

This really extravagant method, then, of referring the whole water pressure to the two hill buttresses, and nothing but the dam's own weight to the ground beneath, would be at least four times cheaper in stone than the engineers' method: but it is still wasteful, because, in any case, all the pressure below a certain level would be transferable by less material to the ground than to the hills. How much of the lowest and otherwise thickest part it might be economical thus to reduce and prop from the ground, would depend on the width of the valley's bottom and the depth we must go below it for firm matter to push against. But in no case, with these dimensions, would any very considerable part be so treated; for we must remember, the material needed to prop any point from the ground increases as the square of that point's height; double height, quadruple prop; tenfold height, hundredfold prop; and we have seen the egregious waste in the Bradfield case of referring any of the upper parts of the pressure to the ground, since the whole, even from the ground-line itself, could be four times more cheaply referred laterally to the hills than down to the ground. What engineers overlook is, that the latter, though so much nearer, has nothing opposite to combine with.

Now in this horizontal arch, let us observe, first, that the rigorous equality of pressure, the absolute impossibility of any partial load ever coming on much or little of the curve, gives us wondrous economic advantages over all vertical arches, especially those of bridges. Remember the sole reason the keys of London, Southwark, or Chester bridges are some dozen times deeper than they are required to be to bear safely the *greatest* loads that can come on them, is the *variableness* and variable placing of their loads. Every change alters the form of the curve of pressure, and there must be depth of stone to contain, not one, but *all* the forms it ever takes: *depth*, but not therefore *quantity*, of stone in the same proportion. To make the insurance increase of depth involve just as much increase of stone was, of course, mere engineerism and modern heedlessness. All the real designers before percentage-paid art was heard of, got the depth without the wasted weight, in arch or supports, by thickening, not the whole width, but only ribs. Our moderns, doubtless, do the same in all materials but stone (in Southwark Bridge, for instance), but thereby show it is from no clear view of this, but some confusion their heads have made between arches and beams, which have nothing in common. A beam or joist they can hardly help knowing (as Adam discovered, and many later constructors, without algebra) employs more of any given material's strength the deeper its section; but in arches of the same curvature, the same amount of matter will bear the same load, in whatever form of cross section; and the reasons they preferred, in all times of real engineering, deep ones to broad, and ribbed their bridges and vaults so as to partake more of the sea shell than the egg-shell, were double, but both distinct from the reason for deep and narrow joists. The chief reason was that above given, applying more or less to every case conceivable except our egg-shell dam; but there was a second reason, the desire to make the arch's rigidity less dependent on the workman's accuracy of jointing. The smaller fraction of the whole radius the radial joints may be, the more close and well-wrought must they be. The *boldest* known arch in the world, and therefore what had need be the best jointed, is still that beam-like one hidden in the roof between the towers of Lincoln Cathedral, because its shortest joint is to its radius only as 1 to 140.* This is nearly twice as bold as the proportion found above for the bottom thickness of our egg-shell wall, if in the Bolsover stone; but a weaker stone would be even preferable, if of larger horizontal dimensions; they being the quality most precious in the material for this purpose, and therefore no district in the world having fitter for it than Yorkshire.

The second Gothic reason, then, for ribs rather than a simple eggshell, namely, to save the necessity for Greek accuracy in the joints by making them longer, applies, I think, so far to the upper courses of our dam, as to make it desirable they should none have shorter joints than the lowest; so instead of battering, it should keep its full width to the top, with no more stone than if it battered: that is, if there are forty-five courses, and the top to be a tenth as strong as the lowest, instead of reducing each by a fiftieth of the *width* of the lowest, you will reduce each by a fiftieth of its *height*, and then raise them to intervals over each other, increasing by the same quantity (fig. 2), supporting them there by blocks, and thin fillings on the face next the water; and some of the lower courses — how many would depend on the circumstances above indicated—being suppressed and replaced by upright vaults and buttresses.

But if we cannot cement a wall watertight, or consider puddling, and therefore a sloping face to retain it, necessary, then we should, with no change in the amount of ribbing stone, require so much more supplementary masonry or brick, that we ought to utilize it by separating the ribs far enough to serve as floors (fig. 3). The vaults A B need only be a brick's breadth, and the higher ones a brick's thickness, each brick bearing on two ribs of large thin bricks made like fig. 4; and short common bricks being used for the lowest vaults, and progressively longer ones above, to separate these ribs farther, as fewer become necessary.

Thus we have a structure leaving nothing to chance nor hidden unskilled labour: one whose every part (in fact, every piece of material) is examinable, and almost singly renewable; one of a strength as definite, calculable, and unalterable as the force it has to restrain, and without a pound of matter wasted, in reserve, or even inactive: one aiming, in short, to be what I have long considered all worthy structures should be, —the exact opposite, in all points, to current English engineer-craft. E. L. GARBETT.

* Ware, Bridges, p. 21.

TUAM CATHEDRAL.

THIS edifice is now being rapidly proceeded with. Our engraving shows the shape it will take. The material used externally is the mountain limestone: the interior is lined with sandstone, from Mayo, of a reddish colour. The pillars dividing the nave from the aisles are to be of green Connemara marble; and the total cost will be about 12,000*l*.

The architect is Mr. Thomas N. Deane; and the contractor is Mr. W. Crow, of Dublin.

The eastern end of the building includes the ancient semicircular archway, concerning which, and the removal of some other parts of the old building, letters were printed in a former volume.

TUAM CATHEDRAL, IRELAND.—Mr. Thomas N. Deane, Architect.

EARLY BRICKWORK IN ENGLAND.

ARCHITECTURAL MUSEUM.

A LECTURE on "Early Brickwork" was delivered here on the 29th ult., by the Rev. E. L. Cutts. We must content ourselves with a mere memorandum of some of the headings. The Mediæval brick architecture is a chapter in the history of the art which is valuable in itself. It is interesting to note how the architects adapted the principles of Gothic art to the necessities of the unusual material. But it has a further and especial practical interest for us just now, because economical considerations make it politic that we should use brick in our architecture to an extent unprecedented in former times,—at least, to a far greater extent than it was used in England. Brick is in many parts of the country the usual and the cheapest substantial building material. If an architect is called upon to build a church, and is limited in the amount of funds placed at his disposal, which is usually the case, it is a great advantage if he can use brick for his material, and so have more to spend on the architectural features of his building. Especially, if Gothic principles are ever to be generally introduced in Domestic architecture, it is imperative that we should find or invent a style of brick Gothic which shall be applicable to the purpose. There is a considerable quantity of Mediæval brick architecture,—in France some, in North Italy more, and in North Germany a considerable quantity; and our modern architects who have at present practised brick Gothic, seem to have gone to these sources for suggestions as to design and construction. Our own Mediæval brickwork does not seem to have had much influence on modern practice. It is true that we have less than those countries above mentioned, and the chief part of what we have is of a later style than that which we have taken as the basis of modern practice. Still, it is natural for us to be desirous of knowing what our native architects have done, be it little or much, more or less excellent.

Britain was a Roman province 400 years; possessed considerable measure of civilization, numerous walled towns, with houses, public buildings, temples, amphitheatres, connected by good roads and bridges; villas were scattered over the country. Saxon invasion swept over the land in successive waves, occupying 100 years, of whose history we know very little; but at the end we find villas destroyed, inhabitants of towns diminished, while whole quarters were occupied by ruins. These ruins served the future builders as quarries of ready-prepared material. We find the materials of ruined Roman buildings worked into Mediæval buildings, and that Mediæval builders imitated the style of the still existing buildings. The Romans made extensive use of brick, even where stone was procurable, for bonding courses and dressings.

Builders of churches supposed to be Saxon used the Roman bricks they found, *e.g.*:—

Holy Trinity, Colchester.—West end, a gable, with round arch, rude, as if to be plastered; tower added, with coigns and windows of Roman brick.

Colchester Castle Keep, time of William the Conqueror, has same plan exactly as White Tower; brick and stone. On exterior, stone dressings, as far as it lasted them, brick coigns. Internally, arches of windows brick; bonding courses irregular.

St. Botolph's Priory, one of the most remarkable examples in England. Nave arcades of rubble, intended to be plastered; west end, brick arcades.

Matthew Paris tells us that Abbot Paul, 1077-1088, built St. Alban's Abbey Church out of stones and tiles his predecessor had collected from ruins of Roman city. Views have been published by Messrs. Buckler. Rubble walls, arches turned with brick. Eboracum bricks in St. Mary's Abbey.

Great Tey Tower, of Roman material, probably ruins of town which, according to tradition, formerly existed south of the church. Two dates. Lower parts brick dressings. Belfry-stage: stone coigns and battlement, brick introduced very nicely in belfry-windows, brick newel stair, hypocaust tile for light.

Spital Maldon, Early English, has a triplet of lancets turned with brick.

L. Wenham Hall, Decorated, used to be quoted in earliest Mediæval building. Some Roman shaped brick and flint in the walling, but bulk of it is a coëval pale red brick, more nearly of modern Flemish shape, viz., $9\frac{3}{4} \times 4\frac{3}{4} \times 2\frac{1}{2}$ inches, with stone dressings.

At Hull, a brick tower in the fourteenth century belonged to monks of Meaux, Wyke-upon-Hull, and the brick chancel of Holy Trinity Church was built in their time, viz., in 1270. It was a favourite resort of wool merchants, one-third of them Flemings and Florentines. No doubt this accounts for the introduction of brick. King Edward I. bought it in 1293, gave it a charter, De la Pole Mayor, and called Kingstown-upon-Hull. Wall built of brick begun 1299, and houses also of brick; but only side walls of chancel brick, east wall of stone, dressings and buttresses of stone; brick deep bright red $10\frac{1}{2}$ inches by $5\frac{1}{4}$ inches by 2 inches; plastered over, "but most of it has come off from the effects of time." Bricks made outside the town at a place called the Tylery.

Three quatrefoils of terra cotta, as ornaments in mould, Frittenden Church, Kent, inside.

Similar one in point of east gable of Lawford Church, Essex, outside.

A few other traces of the use of brick in Decorated period. Moulded bricks of various kinds built into wall of Danebury Church.

Mr. Street mentions in a paper in *Church Builder*, that there are records of their use at the King's Hall, Cambridge, time of Edward III., when they cost 6s. per 1,000; time of Richard II., cost 6s. 8d.; time of Henry IV., 5s. $7\frac{1}{2}$d.; Henry V., 6s. 8d. At Eton, time of Henry VI., 100,000 bricks at 10d., laying 25s., made in a field near the college.

It was not until the fifteenth century that bricks were generally adopted as a building material in England. They seem to have begun to come into fashion about the time of Henry VI., and for many years after used in domestic buildings of the first class, and in ecclesiastical buildings of some importance.

Three modes of using bricks:—

1. For walling, with stone dressings.
2. Exclusively with moulded brick dressings.
3. With terra cotta dressings and ornaments.

Of these various modes Mr. Cutts referred to existing examples, and commented on them.

INNS OF COURT HOTEL, LONDON.

THE works connected with the erection of this building have been this week commenced. The site extends from Holborn to Lincoln's-inn-fields. The hotel will have a principal entrance on each front, and will be in two large blocks, connected together across Whetstone-park by covered corridors. The accommodation provided by the plans consists of two spacious coffee-rooms, one fronting into Lincoln's-inn-fields, 70 feet by 30 feet; and another into Holborn, 56 feet by 23 feet; and a ladies' coffee-room, 34 feet by 24 feet. There will also be provided a drawing-room, 56 feet by 23 feet; a billiard-room for three tables, 70 feet by 21 feet; a smoking-room, overlooking the conservatory, 42 feet by 17 feet; fourteen private sitting- or arbitration-rooms, varying in size from 27 feet by 21 feet to 18 feet by 12 feet; and upwards of two hundred bed-rooms. On the ground-floor, a large interior court, 70 feet by 40 feet, is a prominent feature, giving light and air to the centre of the Holborn block. This will be roofed in, over the first-floor windows, with iron and glass, and rendered attractive by symmetrical arrangement, and by the introduction of plants, flowers, and a centre fountain; and round it are arranged many of the principal rooms. Hydraulic lifts for passengers and luggage, and also for domestic purposes, will be fitted up in each block, by Sir W. Armstrong & Co., of the Elswick Works; and the cooking apparatus will be by Messrs. Jeakes & Co. The buildings will be fire-proof throughout, from floor to roof, on Messrs. Fox & Barrett's principle; and the four principal staircases will be of Portland stone. Externally, the principal fronts in Holborn and Lincoln's-inn-fields will be in Bath and Portland stone, relieved by columns of polished red granite and serpentine marble shafts. The elevations are in the Italian style of architecture, and rise to a height of more than 80 feet.

The building contract has been taken by Messrs. Hill & Keddell, of Whitechapel, for 65,000*l.*; and the outlay on the site and buildings will exceed 100,000*l.* The works have been designed and will be carried out under the superintendence of Messrs. Lockwood & Mawson, architects; and it is intended that the building shall be opened in May, 1865.

ARCHITECTURE AND ITS TEACHING.

NOTHING is more opposed to the nature and progressive development of architecture than that system of teaching and practice which virtually makes it the mere toy of fancy, and which changes as the fashion of the day. Nothing, surely, can be more derogatory to the character of an art whose highest claim is that of its being the cystallization—not of days, but of centuries; not of individuals, but of nations! And yet the idea of a progressive development, if not altogether rejected, seems to be ignored in many quarters. In some of these, a sort of *indiscriminative* eclecticism that merely takes a bit from here and a bit from there, and that foists them upon our modern architecture, prevails. The bit is either from some ducal palace or some Italian or French example,—whether Classicesque or Gothic it often matters not, so long as a kind of originality or piquant effect be produced. Here it is something taken without adaptation from the Doge's Palace at Venice; there something else, from some French or Spanish Gothic building. What, I ask, can a system based on such a proceeding be really worth? It may form a *patchwork style*, but nothing better. I am not speaking now of that intelligent and discriminative eclecticism that has been the great source of growth in all past styles, but of that which merely selects—or rather *collects*—and adapts *in toto*. What, indeed, can be expected of a method that, ignoring the varied conditions of their existences, throw together *pêle-mêle* incongruous elements and styles, native and foreign? What but hybrid monstrosities can accrue? We must *bend*, *modify*, and *adapt* our borrowed elements,—not simply copy them, which we are too apt to do, notwithstanding the repeated denunciations against copyism and its baneful consequences. But there is another class, far more injurious to the development of true art, viz., those who reject all past principles and styles and cling to their own conceits. These "originalists," as they like to call themselves, pretend to work independently of all precedent, though it is pretty certain that the best works of this school have always a great deal in common with past and established principles. It is not so easy to get rid of forms, principles, and details that the past has sanctioned, any more than it would be to act contrary to the dictates of experience, or to throw to the winds the established facts and truths of moral and physical science. The one is equally as absurd as the other.

It is with these views that, in common with "M. A., Cambridge," I cannot look with satisfaction on any countenance or support given to principles so adverse to architectural growth as he referred to in these pages. The history of architecture, in its various stages of development, shows us clearly, that combinations of various circumstances quite beyond the control of *individual* talent, however great, have evolved all existing architectures. Each has been the result of climate, material, and thought, in conjunction with pre-existing elements. The early lintel type is modified and elaborated, by *degrees*, from the Egyptian to the perfected examples of Greece: the Etrurian elements are next blended; and we see the arch and the lintel equally dominant in the Roman, which becomes more individualized as a style, in the Augustan period. The foreign elements by the tide of conquest—from Asia and the East, and the growth of the arch element, gradually effect a change; the lintel at last yielding to the arcuated principle, which becomes the predominant characteristic in all the Romanesques, though modified, in the Byzantine and other Eastern varieties, by climate, religion, and national thought. Next we have the Pointed arch,—the origin of which—at least its form—has been traced back to Early Pelasgic art,—timidly introduced through the East, and not reaching its full development till the fourteenth century, when it culminated in our own Gothic.

Among these stages of architecture it is in vain that we look for any *sudden* transition, or for any individual peculiarity that pre-supposes a hasty invention. From one style, another follows as a *natural sequence*, never as an adventitious result. Each is a growth of time, of an *aggregate number*, never of a few individuals. Nor does this truth undervalue individual effort in the least. Ictinus, William of Wykeham, Sir Christopher Wren, are not one tittle the less thought of because they followed pre-existent examples. In science even, discovery, though it may first dawn on one or two, is never worth

much till many minds have been reflected on it. of our most competent authorities in art, and, ly lately, Mr. Scott in his recent lecture, have sisted upon the value of the past; not as our ly teacher, but as our guide,—never to be indly followed, but always to be consulted.

G. Huskisson Guillaume.

RESERVOIR EMBANKMENTS.

You state truly in your last impression that ie discharge pipes of the Manchester reser- oirs are 4 feet in diameter, but you might have so added that their use is now being discon- nued. At the Woodhead reservoir a tunnel 00 yards long is being driven through the solid ock at the end of the embankment; and at the orside reservoir, a little lower down, this im- rovement was carried into effect, I believe, about ree years ago. With this notable instance to dmonish them, it seems strange that the Shef- ield Waterworks Company should have con- nued the same plan in the Agden embankment, hich appears less solid than the Bradfield, tips f 9 or 10 feet being plainly visible, one above he other, the cavities in the interior of the tructure literally forming a mass of open stone- work.

It would be satisfactory if an accurate mea- urement of the water issuing from among the tones at the foot of the embankment were nade. An approximate calculation from velo- ity, &c. gave about 400 cubic feet per minute, xclusive of that derived from the springs, which would add materially to the above quantity. Scarcely sufficient attention has been paid to the question of springs, two of which can be seen in dangerous proximity (within 40 yards) to the north end of the embankment. Now, if leakage from the pipes, placed as they were below the surface of the ground, caused the accident by saturating the materials at the base of the embankment, the rush of water, finding nothing but a soft and unconsolidated barrier to arrest its progress, would probably have scoured out the dam to a much greater extent than actually is the case: it is, at least, as probable as any of the other conjectures, that water from the springs on the hill-side crept along the embank- ment until reaching the point of greatest pres- sure (the centre line of the chasm is exactly over the old bed of the river, and is the line of great- est depth), it caused that portion to give way. The rate at which water had to be supplied to the mills was 10 cubic feet per *second*, and the reservoir would supply that quantity without being filled for about twenty-two weeks.

The great lesson of such a catastrophe is assuredly to avoid a similar mistake in future. Mr. Rawlinson, in his evidence, says,—"The inference is, that the water, as it rose, would penetrate the bank, and search out its weakest point." The question, therefore, arises, Why let the water have the power of penetrating through to the puddle? Why not cut it off before it has reached the centre of the embank- ment, and rendered one-half the structure use- less to sustain the tremendous pressure of the water?

A. J. C.

VOLUNTEER REVIEW GROUNDS.

On the great demonstration near Guildford last Easter Monday, numerous accidents occurred owing to the rough nature of the wide field of action. Indeed, it would be difficult to pitch upon any one locality, at a convenient distance from London, where 17,000 or 18,000 troops could find free scope for the evolutions of a field-day.

For exercise, drill, and practice, there are several fields in and near the metropolis, Worm- wood Scrubs and Blackheath having long served for the practice of regular regiments of the line; but Wimbledon Common, an elevated and nearly level plateau, within seven miles of the centre, may be considered the best and most appro- priate locality for the metropolitan and home counties corps of volunteers on a field-day: ex- tending a mile from Putney to Wimbledon, and about half a mile in the traverse, the site is unrivalled. But it has the disadvantage incident to all old commons, of being badly drained in many parts, in others thickly grown with furze; and, what is more unfavourable still, there are a few deep dykes and trenches; and it is in many places rough with hillocks and deep cattle- tracks: besides that, the old custom (now obso- lete) of cutting turfs there, has spoiled the surface, beneath which there is a deep substratum of dry gravel. All these obstructions, although the expanse is clear of trees and plantation, are most unfavourable for evolutions of masses upon an extended scale. At a review which took place there last summer, on a charge at quick movement, over a dozen heroes tumbled into a trench, knee-deep in the bog.

As before stated, the condition of the ground is for the most part favourable, and it would not involve a great expense to fill in the deep trenches with sewers, conducting drain-pipes from the few marshy portions into them, at the same time levelling the furze-grown mounds and cutting away the scrub: this would be a benefit to the copyholders, by improving the pasturage, and could be effected at a trifling expense. There are, perhaps, about 50 to 100 acres which would require drainage, and for this the furze, with a few drain-pipes, would serve. About 150 acres more ought to be levelled, so as to form clear marching ground; and there is no reason where- fore this common should not be as smooth, clean, and at least as verdant as Hyde Park.

The National Volunteer Company, of which Colonel A. Lowry Cole, C.B., is chairman, pro- pose to improve the common after this fashion, on having permission of the lord of the manor; and, in connexion with the Volunteer Hotel, designed for that locality, it would confer great advantages upon this now justly popular national force. Already butts for rifle practice have been for some time established and in use, close to the site of the proposed hotel. No other spot so near London is more appropriate for that object; and, were the fine and elevated expanse of Wim- bledon common thus planed and levelled, it would meet a requirement which is every year becoming more essential, as our free legions increase in numbers and popularity.

M. A.

SHEFFIELD INUNDATION.

Sir,—At the inquest, the jury returned their verdict mainly on the evidence of Messrs. Jack- son and Rawlinson. With reference to the evi- dence of Mr. Jackson, I would like to make a few remarks, because I think it cruel that the pro- fessional reputation of a gentleman in Mr. Leather's position should suffer by the expression of opinion of an inexperienced and an unpro- fessional man.

Mr. Jackson stated that he had large experience in waterworks in Melbourne, and he gave an instance of one of those works failing in con- sequence of his having placed his outlet pipes on stone blocks. What else could he have expected? Such a course could only end as it did, inasmuch as the whole weight of his embankment had to be borne by the pipes, and of course they having support only at their end, the necessary consequence, viz. the fracture of the pipes, followed.

I am informed that Mr. Jackson's Australian works are of the smallest possible extent, con- sisting of an embankment or two, which any ordinary navvy ganger would carry out. Allow me to say I know nothing of either Mr. Leather or Mr. Jackson personally, and have no end to serve but that of obtaining fair play.

Mr. Rawlinson having endorsed the verdict of the jury, of course may be taken as having given the opinion expressed by them as his own.

To one of the points I beg to refer. In allusion to the work which was being carried on at the Agden reservoir, it is said, "The stratified and open-jointed seams of rocks within the water area of the reservoir are being bared," &c.

I am utterly at a loss to know what is meant by coupling this with the following: "And, in fact, everything objectionable at the Bradfield embankment, which has failed, is now in course of repetition at the Agden embankment." It is given in evidence, and the clearly visible conse- quence of any water passing down these strata is that you will lose water, but if the puddle- wall be good (and it was stated by Mr. Beard- more to be excellent), it is quite impossible that this work could have anything to do with the catastrophe, which we all so much deplore.

I have had some considerable experience in water-works for nearly thirty years, and, from my practice, I am prepared to say that if Mr. Leather's instructions, as given in his evidence, have been properly carried out, the cause of the failure must be looked for in other things than the matters referred to by Messrs. Jackson and Rawlinson.

James Knight.

Vestry Hall, Mile-end.

JERUSALEM.

Those who remember the debates which im- mediately preceded our war with Russia, and who have since perused the first volume of Mr. Kinglake's "Crimea," will know with what jealous care all Russian interests, rights, and property are guarded at Jerusalem, and how the enlightenment of the nineteenth century has been unable to lessen the national fanaticism with which the Holy City is regarded,—by mil- lions with the "mind's eye" only, by a happy few with their material organs of vision. Almost from the day when the cross rose above the crescent of Islam, the Eastern and Western churches rivalled each other in the possession of land in the vicinity of the city, and a corre- sponding number of churches and convents fol- lowed as a matter of course.

A letter from Jerusalem of the 26th of February informs us of a fresh batch of eccle- siastical buildings which have just been com- pleted on the plateau to the north-west of the city by the Russians. The architect was Mr. Eppinger, a German by birth, but practising in Russia; and the buildings con- sist of a church, a bishop's palace, a house for male pilgrims, another for female pilgrims, a spacious hospital and dwellings for officials, clerical and lay, amongst the latter a new con- sulate.

The cost of these buildings was two and a half millions of francs, to which will be added gildings, paintings, and mosaics worth 200,000 roubles more—a present from the Emperor—mak- ing a total of 800,000 roubles, or about 125,000*l*. The church is in that peculiar style which in Russia gradually developed itself out of the Byzantine Basilica, having six domes grouped round one larger one, and two campa- nili flanking the chief façade. The arrangement of the bishop's palace is in the form of a large quadrangle, containing, besides the episcopal residence, suites of apartments for clerical mis- sions, royal pilgrims, and others.

NEW EXCHANGE, LIVERPOOL.

Last week a contract was entered into with Messrs. Holme & Nicol for part of the proposed new Exchange, namely, the western wing, in- cluding the news-room and the offices extending to Rumford-street. The builders making pro- posals were eleven in number; and it is said that the following is a correct list of their tenders:—

J. Mullin	£82,310	0	0
Mansfield	77,600	0	0
James Burrowes	77,146	0	0
H. & R. Holland	74,589	0	0
J. Neill	72,900	0	0
R. Neill	72,450	0	0
Jones & Jump	71,350	0	0
Livesey Brothers	71,000	0	0
Haigh & Co.	71,000	0	0
J. Parker & Son	69,539	0	0
Holme & Nicol	68,380	0	0

PREMIUMS AWARDED BY THE ARCHITECTURAL INSTITUTE OF SCOTLAND.

1. For the best geometrical drawing, by apprentices of not more than three years' standing.

The Council have awarded a book to Alexander Suther- land, apprentice to Mr. David M'Gibbon, architect, Edinburgh.

2. For the best perspective drawing.

The Council have awarded the medal to Alexander Fraser, apprentice to Mr. John Lessels, Architect, Edin- burgh; and a second prize to Alexander Sutherland.

3. For a series of drawings of a small portion of any ecclesiastical building, measured and drawn from the originals.

The Council have awarded a book to William Rennie Syme, apprentice to Messrs. Peddie & Kinnear, archi- tects, Edinburgh.

4. For the best original design,—subject, a church tower in perspective.

The Council have awarded the medal to George F. Wilson, apprentice to Messrs. Leadbetter & Smith, archi- tects, Edinburgh. They also consider the designs of Hippolyte John Blanc, apprentice to Mr David Rhind, architect, Edinburgh, and of Andrew Dewar, apprentice to Mr. Robert Paterson, architect, Edinburgh, to be highly deserving of commendation.

5. The Council this year offered an extra prize for the best series of not less than five drawings of Scottish build- ings, suitable for publication in the Illustrated Transac- tions. They have awarded the silver medal and 5*l*. 5s. for a very elaborate and beautiful series of drawings from Elgin Cathedral and Coxton Tower, which they intend this year to publish, to John Ogilvie, Elgin. They have also awarded as a second prize 5*l*. 5s. to Edward F. C. Clarke, Edinburgh, for a scarcely less elaborate and beautiful series of drawings from Lincludin and Sweetheart Abbeys, and from a Carmelite Monastery at Queensferry, which will probably be published next year. Mr. Clarke has on several previous occasions distinguished himself by bearing off the Scottish Insti- tute's prizes.

VOCABULARY OF ARCHITECTURAL TERMS, IN EIGHT LANGUAGES.

The following Vocabulary of the principal Terms in Architecture, Civil and Ecclesiastical, in Six Modern European Languages, and the existing Equivalents in Latin and Greek, is by HENRY HALL,* F.R.G.S., Assistant Surveyor, War Department.

ENGLISH—Terms in Civil Architecture.
FRENCH—Les Termes d'Architecture civile.
ITALIAN—I Termini d'Architettura civile.
SPANISH—Los Terminos de Arquitectura civile.
GERMAN—Bürgerliche Bankunstworte.
DUTCH—Burgerlijke Bouwkundewoorden.
LATIN—Verba pertinentia ad Architecturam civilem.
GREEK—Ὀνόματα ἀρχιτεκτονικά.

ENGLISH.	FRENCH.	ITALIAN.	SPANISH.	GERMAN.	DUTCH.	LATIN.	GREEK.

TERCENTENARY NEWS.

Photograph of Shakspeare.—Not exactly that: what a rush there would be for it if such a thing existed: but a photograph of the *portrait* of Shakspeare, preserved in his house at Stratford-on-Avon, has been published by Messrs. Cundall & Co., and will doubtless find buyers. We are not bound to establish or disprove the authenticity of the portrait. Suffice it that it agrees to a considerable extent, especially in the lower part of the face, with the bust in the church,—perhaps was painted from it;—and that the photograph is forcible. . . . .

Commemoration Ribbons.—We have before us the commemoration ribbons manufactured by Mr. Thos. Stevens, of Coventry, which show both skill and taste. The bust of the poet, his birthplace, and Stratford Church, are cleverly woven. Illuminated book-markers and badges form quite a new branch of trade in Coventry, and employ a large number of weavers. Since the date of the French treaty, there would seem to have been an improvement in the character of designs here. It is thus that manufacturers may place themselves beyond fear of foreign rivals. . . . .

Birmingham.—On the morning of the 23rd the mayor will invite a number of gentlemen to a breakfast, at which he has kindly consented that the Shakspeare Library shall be formally presented to the town, as the room in the Free Library will not be ready for several months yet. In the evening of the same day the Shakspeare Club and their friends will dine together, with Mr. George Dawson in the chair.

Gloucester.—A public meeting has been held, at which the Mayor of Stratford attended, and advocated the movement of the monument.

London. In aid of the fund of the National Shakspeare Committee, an artistic amateur musical entertainment of a novel kind was to take place at the Assembly Rooms, Eyre Arms, St. John's Wood. There Mr. George Cruikshank vocally and pantomimically illustrates the adventures of Lord Bateman and Billy Taylor, — adventures which the caricaturist has already immortalised by his pencil. There Mr. Stacy Marks sings the "Country Fair;" while Messrs. Desanges, Du Maurier, and Leslie also contribute to the good cause.

THE DRAMA IN THE DRAWING-ROOM.

LAST Wednesday evening a new and original play, called "Light and Shadow," by Mr. Angiolo R. Selous, author of the "Templar," was acted at the house of his brother, Mr. Henry C. Selous, with remarkable success. The latter gentleman had painted for it three capital scenes, the Park of Belle-Maison, and two Interiors; and with the author, who played the chief part, Miss Minnie Selous, Miss Jennie Selous, Mr. Dever, Mr. Joseph Durham, and others, acted excellently. Mr. Planché's "Loan of a Lover," with all the songs, followed, the cast including, besides some already named, Miss Maria Selous, and a fourth capitally-painted scene.

Such an incident, where we find in one family the author, the scenic artist, the actors and the singers, all good, is worth wider mention.

The period of the new play, which is of the "Plot and Passion" class, and is full of opportunities for good acting, is that of the Regency of Philip of Orleans, memorable by the rise of the great Mississippi scheme. It can scarcely fail to obtain an effective public representation before long.

COMPENSATION CASES.

Cooper v. *The Charing-cross Railway Company.* This was a writ of inquiry (Lord Mayor's Court) to assess the compensation to be awarded to the claimant in respect of a block of very old-established up-town wool warehouses, known as the "Dowgate-hill Chequers-yard," the same being taken by defendants in accordance with the terms of their City Extension Act.

Mr. Bovill, Q.C., and Mr. Garth (instructed by Messrs. Van Sandau & Cumming, King-street, Cheapside), appeared for the claimant; Mr. Lloyd and Mr. Mellor (instructed by Messrs Toogood) representing the Company.

Mr Bovill detailed a short history of the premises, premising that, although this might be called a compensation case, yet nothing could really recompense the claimant for the compulsory removal. The old tenant in this case was the only son and successor of the late Mr. John Cooper, who had for about forty years before his death carried on business as an up-town wool warehouse-keeper. The claimant naturally increased his business, and at length the old Dowgate-hill Chequers-yard became a very favourite warehouse in the trade. In 1860, however, he received notice from defendants that they intended applying to Parliament in the following year for powers to take Chequers-yard. The claimant at once dissented from this proposition, and presented a petition to the House of Lords; but his opposition did not stop the railway company, for the bill passed, and in February, 1862, Mr. Cooper received the usual notice to treat. As soon as he found that he would certainly be displaced, Mr. Cooper cast about for other premises, but could not find them at any price, and after great anxiety he purchased the site of a plot of ground in New-street, Bishopsgate. Although he commenced negociations in the autumn of 1863, he did not gain possession until December, and then he had to clear the ground of a number of small buildings, which had been let to weekly tenants. After having done this, he commenced erecting a spacious warehouse, which will in all probability be finished about September next. It had been his wish to get it ready for the reception of wools before he would be altogether removed from his old premises, but this was found to be impracticable, and in addition to the ordinary loss consequent upon removal, there would be an almost entire suspension of the business, with a probable loss of connexion, and great loss of profit. For all this Mr. Cooper had sent in a claim of 20,000*l.* To this a kind of valuation of something like 8,000*l.* was put by Mr. Ryde, but no real offer ever came from the company. The company then advertised the sale of the premises, and to show how speedily they have gone to work, it must be seen that they were now nearly demolished.

Mr. Cooper, an accountant, then went through the figures of a balance-sheet for 1862 and 1863, showing that the net annual profits were about 2,250*l.*

Mr. Williams, the architect of the new premises, stated that in addition to 10,000*l.* for the land, the plaintiff was laying out 20,000*l.* on the new warehouses in New-street.

Mr. Balme, a wool broker, deposed to the advantageous situation of the old warehouses. New-street, Bishopsgate-street, was a very inferior situation, and it would take time and money for Mr. Cooper to get his connexion together again.

Mr. T'Anson, Lawrence Pountney-hill, said that the three warehouses, comprising Chequers-yard, were D, E, and F. Warehouse D, held on lease from the Plumbers' Company, having 14 years unexpired from Christmas, 1863, was estimated to be worth 53*l.* per annum: the present rent and land-tax, amounting to 28*l.* 10*s.*, leave a profit rent of 26*l.* 10*s.* This being capitalized, at the 6 per cent. tables, for 9·6 years' purchase, gave 256*l.* 12*s.* Warehouse E, held under the Drapers' Company, lease six years to run, gave a profit rental of 41*l.*; capitalized under the 6 per cent. tables, was worth 2,041*l.* 16*s.* Warehouse F, also held under the Drapers' Company, six years unexpired, gave a profit rental of 54*l.* 3*s.* 4*d.*, which capitalised gave 2,701*l.* 18*s.* To these sums is added 42*l.* for situation and benefit to be derived therefrom, and with 10 per cent for compulsory sale, witness put the value of the leasehold interest at 5,545*l.* 6*s.*

In cross examination, Mr. T'Anson considered that plaintiff would of necessity be a great sufferer by this compulsory removal.

Mr. Marsh, Nelson valued the leasehold interest at 9,280*l.*; Mr. Farmer (Debenham & Tewson) at 9,223*l.*; Mr. Arntz agreed with Mr. T'Anson.

Mr. Lloyd then addressed the jury for the railway company, and said that he should call several highly respectable professional witnesses, who would prove that the claim as set up was very much exaggerated.

Mr. Shaw valued D warehouse at 1,587*l.* 17*s.* 6*d.*, E warehouse at 1,550*l.*, and F warehouse at 1,370*l.* 18*s.* 8*d.*, making a total of 4,508*l.*, with 10 per cent., 4,958*l.* for the leasehold interest.

Mr. Pownall valued the three warehouses at respectively 1,335*l.*, 1,600*l.*, and 1,570*l.*, with 10 per cent., gaving a total of 5,155*l.*

Mr. Clarke (Farebrother, Clarke, & Lye) gave 1,250*l.*, 1,400*l.*, and 1,550*l.*, with 10 per cent., 4,561*l.*

Mr. Reid gave 715*l.*, 1,400*l.*, and 1,250*l.*, with 10 per cent., 3,753*l.*

Mr Charles Lee, 1,087*l.*, 1,325*l.*, and 1,440*l.*, with 10 per cent., 4,247*l.*

Mr. Vigers made his total 4,470*l.*

The Recorder in summing up remarked upon the difference in the figures of the professional witnesses, and said it was for the jury to decide between the parties, always remembering that plaintiff was entitled to a fair and reasonable compensation.

The jury awarded plaintiff 16,400*l.*

Books Received.

Compensation to Landowners: being a Practical Digest of the Law of Compensation. By GEO. V. YOOL, M.A. London: Maxwell, Bell-yard, 1864.

ALTHOUGH this little book purports to be an endeavour to explain the subject of Compensation to Landowners in a manner which shall be as little embarrassing as possible to those who are not engaged in legal pursuits, it is one that the professional valuer should obtain, and may benefit by; and that is more than can usually be said of popular expositions of any subject. It quotes the most recent cases, and comments on some of the defects in the existing state of the law, defects which should at once be remedied.

The headings stand thus:—1. Lands injuriously affected; 2. Lands taken; 3. Lessees; 4. Taking part of a house or manufactory; 5. Private agreements; 6. Power of entry.

Under the heading "Lessees," speaking of the position of yearly tenants, Mr. Yool notes:

"Compensation to yearly tenants whose property is taken, are frequently avoided by settling with the freeholder and then giving the necessary legal notice to determine the tenancy."

No doubt of it; very frequently; and in this way robbery is committed,—quite legally, but robbery for all that. The tenant may have been in possession for five, ten, or fifteen years, and, so far as his landlord is concerned, might remain so, though without a lease, five, ten, or twenty years more. He has made a business, and could perhaps find no place near where he could locate himself to retain it; to say nothing of the unavoidable expenses and loss even if he could; and yet any compensation in his case may be "avoided" by "settling with the freeholder, and then giving the necessary legal notice to determine the tenancy." It has been suggested, and not unreasonably, that every yearly tenant, occupying premises compulsorily taken, in which a business has been carried on by himself or his predecessors for three years or more, should be entitled to be compensated for the loss of his business in the same manner as if he had a lease for as many years (up to twenty-one) as he or his predecessors had carried on the same business in the premises.

The tendency in the earlier days of railways was to victimise the company and to obstruct public improvements by excessive awards. More recently, we are disposed to think, it has been the other way, and individuals have been made to suffer often without forwarding any great public improvement either.

A certain number of leading surveyors, who appear usually to act together, having fought through the first phase of the movement, have acquired such a pious fervour in defence of companies, that it leads them often to underrate very considerably, according to the opinion of others, the value of any property about to be taken by them. The result is, that when, in opposition to their statements, the opinions of other surveyors, perhaps on their side exaggerating, are set, we get startling differences, not very demonstrative of professional knowledge, judgment, or (we must say it) integrity.

A fortnight ago, the surveyors for the owner, in a certain case, swore that the land taken and damage done to other land would not be paid for under 13,000*l.*; and the surveyors for the company swore, on the same book, that 1,200*l.* would be ample compensation. The difference in a case reported in our present number is striking enough, and more than enough, though, the question being narrower, not so startling as in the first-named instance.

It would not be uninteresting to go more fully into this subject, giving photographs of some of the principal performers in the remarkable game that is going on, but this is scarcely the proper occasion. Some other day, perhaps.

VARIORUM.

The Popular Science Review; edited by Henry Lawson, M.D. April, 1864 (Hardwicke, Piccadilly). This well-conducted periodical always contains something of especial interest at the moment. There is in the present number a paper on printing telegraphs, with a page of engraved facsimiles from the printing telegraph of Bonelli, now at work between Liverpool and Manchester, and from Caselli's pantelegraph, in Roman and in Persian written characters, showing the wonderful possibility of writing with a pen two or three hundred miles long. Wheatstone's automatic printing telegraph is also here illustrated. Another interesting paper relates to pre-historic dwellings, with a plate of illustrations; and there are various others, besides a full and excellent summary of scientific progress in all its branches.——"Thomas's Universal Newspaper and Periodical List" (Watson, Brydges-street, Covent-garden, 1864). This is the most complete list of newspapers we have yet seen: it contains, not only the newspapers published throughout the three kingdoms, with their politics and price, and also the weekly, monthly, and quarterly magazines and periodicals, their publishers, price, place, and time of publication, but also a very full list of the principal colonial and foreign newspapers.——"The Sewing Machine" (Spon, Bucklersbury, 1864). In this volume we have an interesting history and description of that very ingenious piece of mechanism the sewing-machine, in its various modifications and applications. The matter is translated from the German of Dr. Herzberg, by Mr. Upfield Green, and it is illustrated by seven plates.

Miscellanea.

The Carmichael School of Medicine, Dublin.—The first stone of the new building was laid on the 29th ult. by the Lord Lieutenant. The principal front will be faced with granite. Mr. J. E. Rogers, of Dublin, is the architect. Messrs. Cockburn & Sons are the contractors. The cost is estimated at 5,500*l*.

Dust Oh!—In London, the price of "breeze," for the purpose of making bricks, has risen to 3s. 6d. per load, though but a few years ago it was scarcely saleable at 1s. 6d. per load. In consequence of this increase of value, the dust contractors are now paying for the dust in many parishes, instead of, as formerly, being paid for removing it.

Mr. W. Simpson's Drawings of India and Cashmere.—The German Gallery, Bond-street, contains just now 158 out of 250 water-colour drawings, made by Mr. William Simpson during a lengthened stay in India and some of the regions beyond the British frontier. He appears to have had great facilities afforded him through the kindness of the late Lord Canning, and has made admirable use of them. The subjects are very varied: with landscape and figures, the ancient rock-cut temples and the Bhore Ghaut incline of the Bombay Railway, the artist is equally at home; and the result is a highly interesting exposition of architecture, scenery, manners, and customs. The religious ceremonies set forth include that of praying by machinery, practised by the Lamas, the Buddhist priests of Thibet. Mr. Simpson's drawings are to be published by in chromolithography, Messrs. Day, and will make a very fine work. The room has been decorated to receive the pictures by Mr. Truefitt.

The Growth of the Local Press throughout the Country.—Go where we will, not only in the metropolitan districts and the large provincial towns, but also in towns of from 2,000 to 3,000 and 6,000 population, we find this power of the State increasing to an extent which can only be properly understood by those who have watched its growth. In many of the large towns there are two or three local daily newspapers, besides several published weekly. The publication of the proceedings of parish and other boards, and of comments on matters of importance to the respective districts, leads to many improvements. By this means, to a certain extent, but not so much as we would wish, sanitary improvements are advanced; schools, hospitals, and other charities promoted; and through the advertising columns of the local press an impulse is given to business of all kinds. For the most part these papers are sold for a penny. Besides matters of local interest, we find in such papers well-digested extracts as to the general news and politics, literary reviews, agricultural notes, leading articles of local or general interest, and very often essays, tales, or rhymes, by some aspirant for literary fame. It is surprising that these speculations can pay, considering the limited price and circulation which many of them must have.

Coal in Mont Cenis Tunnel.—At the Manchester Geological Society, Mr. Joseph Dickinson has exhibited a number of specimens taken from the rocks now being tunnelled through the Savoy side of Mont Cenis. They appeared generally to be from metamorphic rocks; and as yet, he believed, no granite had been touched upon. The most interesting mineral is coal, which is found associated with the metamorphic rocks. It has, he was informed, been cut through in different places in the tunnel. Between San Michel and Modane similar coal is being worked to supply the district. In thickness it is as irregular as the rocks themselves. It is very similar to the Welsh anthracite. There is no regular dip at all in any of the rocks. In one part they stand up like a cone. As for the coal, it is impossible to say which is the roof and which is the floor, as it is sometimes vertical, and it dips in such a variety of directions. The rock which adjoins the coal is of the nature of shale. There are no stratified rocks near—not more than the bedding sometimes met with in metamorphic rocks; neither is the limestone stratified, but it lies in large masses, the same as quartz. The masses are partially laminated, and the coal lies imperfectly bedded. Here and there the quartz and limestone, instead of taking the shape of solid rock, are like snow or flour, and are used in making the mortar for the tunnel.

The New Infirmary for Leeds.—The chief stone of this building, of which we have already given a description, with view and plans, has been laid with some ceremonial, and in the presence of many thousands of the townspeople and visitors from various parts of the Riding. The total expenditure before the building can be opened will be 101,948*l*., of which 97,752*l*. have already been realised, chiefly by subscriptions. Messrs. J. & W. Beanland are the contractors; and Mr. Scott, as we have before said, is the architect.

Fall of a Blast Furnace.—Recently one of the three blast furnaces, belonging to the Messrs. Aston, Wolverhampton, fell with a fearful crash. Fortunately there happened to be only a few men at work at the time, or the consequences might have proved fatal: as it was there were only two men slightly hurt. The iron was in a liquid state at the time of the accident, and ready to be run into the moulds. The place is one mass of ruins, the molten iron and the broken brickwork being mixed together in one great pile. The furnace in question was the newest of the three, and had been built about eighteen years.

The Sluicing Operations at Birkenhead.—The sluicing operations in connexion with the Great Low-water Basin, at Birkenhead, have been resumed. At the commencement of the operations there were about 13 feet of water in the basin, and the tide had about an hour to ebb. The sluices, according to the *Albion*, are found to take off, when all fully opened, a foot in five minutes. This, over an area of 112 acres, would give 39,000,000 gallons of water every five minutes, or a total of 126,600,000 gallons during the time the gates were open. This will give some idea of the immense commotion caused in the basin by such a sudden influx of that vast body of water. Mr. Lyster, the dock engineer, states that during four days' operations, when he wrote, no accident of any kind occurred, and the machinery worked with perfect precision.

Sanitary Matters.—The Local Government Act has been adopted at Tamworth, and also at Blandford.——The district of Beaufort is to be at once thoroughly inspected.——Public feeling in Douglas, the capital of the Isle of Man, is now in a state of the greatest ferment. The legislature of the Isle of Man is vested in a self-elected and irresponsible body, called the House of Keys, all laws being submitted to them for their sanction. A few weeks ago a sanitary bill was laid before this body by the town-commissioners of Douglas. This pigmy parliament, jealous of the town, rejected the bill, though the citizens were alone to be taxed for it. Popular indignation was great on the matter, and the *Isle of Man Times* commented severely on the arbitrary conduct of the self-elected Keys. At a recent meeting of that body the article was declared to be "a contempt of the House and a breach of its Privileges." The editor being summoned before the House, was offered the choice of an apology or six months' imprisonment. The latter alternative was accepted, and the editor was at once removed to the insular gaol. Meetings have been held and a committee appointed, to raise a fund for the purpose of trying the legality of this extraordinary proceeding of the House of Keys.

Gas.—The Sheppy Gas Consumers' Company, Sheerness, have declared a dividend after the rates of 4 and 5 per cent. per annum on two classes of preference shares respectively, and a dividend of 10 per cent. per annum on all ordinary shares paid up on the last day of that year. The directors contemplate reducing the price of the gas now charged at 5s. per 1,000 cubic feet, at the end of the present year.——The Southwell Gas Light and Coke Company (Limited) have declared a dividend of 6*l*. per cent., leaving 119*l*. to the current account.——At the Selly Oak Nail Works, Birmingham, a new system of coke-burning has been adopted, whereby the offensive and pernicious gases which usually escape to taint the atmosphere and injure vegetation, are turned to good account by being conveyed to a neighbouring furnace or fire, either for blast-heating, generation of steam, or other purposes where they can be usually consumed. There is also, it is said, a complete removal from the coal of all sulphurous properties, and thousands of tons of coal now considered of no use may thus be converted into strong and good coke. The invention is patented by Messrs. J. & C. Hawkins, of Walsall. The *Builder* first suggested the utilization of the gas in coke burning, and several plans have since been put into practice, but this is the last we have heard of.

Monster Steam-hammer.—Messrs. R. & W. Morrison, of Newcastle-upon-Tyne, have just forged the largest and most powerful steam-hammer in the world for the Russian Government. The piston-rod to which the hammer is attached is a ponderous piece of metal, weighing no less than 42 tons in its rough forged state; and now, when dressed down to the required dimensions, it has only been reduced to 35 tons. The length of the piston-rod is 58 feet, the diameter 2 feet 4 inches, having a stroke of 14 feet 6 inches, the piston being 6 feet 8 inches. The forging of this mass of metal occupied forty-four days. The cylinder for this hammer was cast at the Elswick Engine Works. Its diameter inside is 6 feet 8 inches, its weight upwards of 49 tons. The standards weigh nearly 40 tons each. The united weight of the hammer-bar, the cylinders, and standards, amounts to over 150 tons.

Artificial Light and Lighting Materials. A paper on this subject was read at the Society of Arts, by Mr. B. H. Paul, on the 30th ult. In speaking of the history of lighting materials, mention was made of the fact that just before "gas" was discovered, mineral oils of the petroleum or paraffine class were being tried with every prospect of success. These oils were distilled, as they still are in some cases, from bituminous shale and other minerals. Although the introduction of gas completely superseded the mineral oils at that time, works were established in France in 1830 for the manufacture of artificial petroleum, and these are still in operation. Somewhat later, other works were started in other parts of the Continent as well as in this country; and about the year 1853, the earth oil of Rangoon was examined by Mr. Warren De La Rue and Hugo Müller, with a view to its application for lighting purposes. About 1860, the extraordinarily abundant supplies of petroleum in America became the object of special interest as materials for lighting. One object of the paper was to consider the charging of atmospheric air with volatile mineral oils, on the principle discovered and patented by the late Mr. Mansfield many years ago, and recently brought out as a new French invention. The danger of explosion was, under certain circumstances, admitted; but it was considered possible to make arrangements for completely obviating that objection, so that these oils might be burnt like gas without any danger of an explosive mixture being formed.

Salisbury Cathedral. The condition of this structure, both as to its general disrepair, and more particularly as to the safety of the tower and spire, having been for some time past a source of much anxiety, it has been resolved to hold a diocesan meeting in the chapter-house attached to the cathedral, with the view of raising the necessary funds for its complete restoration. The cathedral has already been surveyed and reported on by Mr. Scott, and at his suggestion certain works which were considered absolutely essential to the security of the building are in rapid progress, and the contractor, Mr. G. W. White, of Pimlico, has undertaken to complete them by the spring of next year. These works comprise the entire renovation of the decayed portions of the foundations,—a vital part which, from defective drainage and from the whole of the close having been raised several feet when the tombstones were removed and interments discontinued,—had fallen very much into decay; the removal of the soil surrounding the foundation, and replacing it with concrete; the taking down and reconstructing several of the flying buttresses, and certain other substantial repairs, the cost of which will completely absorb the 10,000*l*. received from the Ecclesiastical Commissioners towards the sustentation of the fabric. The additional works recommended by Mr. Scott are estimated to cost from 35,000*l*. to 40,000*l*., and will comprise, in the first place, the carrying out of certain plans to insure the permanent security of the tower and spire, which, from their not having formed part of the original design (a lantern ornamented internally with a colonnade rising 8 feet above the present roof), have for centuries past pressed so heavily upon the four piers which support them as to throw the columns very perceptibly out of the perpendicular; the entire restoration of the interior and exterior of the building, including the west front; the removal of the present unsightly yellow wash from the ceilings, and restoring the ancient decorations; and also the refitting of the choir, and a variety of other important works, together with drainage and warming.

WORKMEN'S CLUB AND TEMPERANCE HALL FOR STOCKTON.—On Easter Monday, the foundation-stone of a temperance-hall and working men's club-rooms was laid at Stockton, by Mr. H. Pease, M.P. The cost of the building is estimated at about 1,500*l.*, nearly 500*l.* of which have already been subscribed.

RAILWAY TRAFFIC RETURNS.—The traffic receipts of railways in the United Kingdom amounted, for the week ending the 19th of March, on 11,184 miles, to 551,185*l.*, and for the corresponding week of last year, on 10,805 miles, to 502,868*l.*, showing an increase of 379 miles, and of 48,317*l.* in the receipts.

THE BLANDFORD BUILDING OPERATIVES' SOCIETY.—The seventh anniversary of this society and division of profits, has just been celebrated by a supper at the Exchange. The company present numbered about 150. The chairman, in his address, commented unfavourably on the Chancellor of Exchequer's new measure, and was followed by another speaker who complained that he could not understand the principle of division of profits in the operatives' society: for, whereas some who had been in the society a twelvemonth received 3s. 10½d., others who had been in the society only seven times that period received fourteen times that amount, viz. 2*l.* 11s. 9½d. No very satisfactory reply was given to this objection. The total income of the society is stated to have been 313*l.* 3s. 0½d.; payments, including 10*l.* kept in stock, 174*l.* 2s. 10d. Amount divided, 139*l.* 0s. 2½d.

ACCIDENTS.—On the 23rd ult., at the main drainage works in Old Kent-road, a boy named George Finch, employed at the steam-engine used for pumping the water from the excavation, was in the act of arranging some part of the machinery, when the engineer, not knowing the position of the boy, put on the steam, and before it could be stopped the wheels had dragged in the boy, crushing and breaking his left arm, and otherwise dreadfully injuring him.——In Gravesend Church, a young man, name and residence unknown, was in the bell-tower taking off the inscription on the bells, when he stepped back, and, missing his footing, fell into the bell-room, a depth of about 22 feet. He was removed to the Gravesend Infirmary, where, on examination, it was found he had sustained concussion of the brain, besides several other injuries.——A serious accident has occurred at the Garston Salt-works, Church-road, Garston, on the bank of the Mersey. The chimney of the engine-house was 60 feet high: it had been built thirty-five years ago. A few bricks fell out recently from its base. The aperture, which prevented the engine fire from burning, was covered over with an old sail, but no other measures were taken. About two hours afterwards, however, the whole base of the chimney gave way, and the upper part fell partly upon the roof of a house, which, of course, it smashed in. A child was crushed to death, and a woman fearfully cut about the head, and her body much crushed.

RAILWAYS IN THE CITY.—A meeting of some of the leading bankers, merchants, and other principal citizens, has been held at Messrs. Rothschild's, in New-court, St. Swithin's-lane, to confer as to the best mode of giving effect, in the House of Commons, to the objections entertained by the great mass of the citizens to the various railway projects now in contemplation, and calculated seriously to affect their interests. Baron Rothschild was called to the chair, and Mr. Samuel Morley, Mr. Crawford, M.P., Mr. Tite, Sir S. M. Peto, M.P., Mr. John Abel Smith, M.P., Mr. Alderman Salomons, M.P., Mr. Gassiott, and Major Snell, were present, with others. A public meeting was held at the London Tavern on the 4th ult. for the purpose of considering in what manner the City of London could be best protected against the various railway bills now before Parliament. The meeting was very numerously and most influentially attended, resolutions were passed, and a committee appointed. The House of Commons has appointed a select committee to consider all the railway bills which affect the metropolis, and it meets on the 11th of April. A petition praying that legislation with respect to all railway schemes which propose entering the City of London shall be postponed until some of the large public works already sanctioned shall be further advanced and time thus obtained for more mature consideration, has been almost unanimously adopted, and most influentially signed.

TENDERS.

For St. Clement's Church, Arundel-square, Barnsbury. Mr. G. G. Scott, architect:—

Ruddle & Thompson	£10,898 0 0
Jackson & Shaw	9,789 0 0

Priestley	109 12 0
Gumbrell (accepted)	105 0 0

TO CORRESPONDENTS.

To deaden Sound.—A correspondent wants to know how he can stop the sound of a piano played in the next house. He says,—"The wall between my house and the next is 9 inches thick. I have tried several things to stop the sound: first, I had the wall battened out and thin boards nailed to the battening, leaving a space between the boards and wall of ½ inches at least, and well packed the space with sawdust, but this had no effect. I then took out the sawdust and put in sand, and the same result followed. I then took down the boarding and sand and had a ½ inch brick wall built in its place, the bricks laid in cement, and leaving a space between the old and new walls of about 2 inches, but still the sound is heard as much as ever."

Colour in Bricks.—F. G. W. writes,—"Can any of your correspondents inform me what remedy to apply to black bricks of a soft nature used in gauged arches to prevent the colour running when exposed to rain?"

HALL, BROTHERS, late of MERSTHAM GREY-STONE LIME WORKS, resigned the above works on the 25th March, at the expiration of their Lease, in consequence of being unable to effect such terms for a renewal as they could accept The works are growing yearly in value for nearly forty years, during which time a considerable business has been established, and now to give them up so unexpectedly, with only a few weeks' notice, without any remuneration for the trade, has caused to them great loss and disappointment. Anxious that their customers should not be inconvenienced by the sudden change, HALL, BROTHERS, have arranged for them to be supplied in LONDON and by Railways from these Works, upon the terms then existing, until the 24th JUNE, by Mr. W PETERS They wish to remind their customers and the public that their business in Grey Stone and Chalk Lime Cement, Slates, Sand, Coal, &c is carried on as usual at Croydon, Caterham, Redhill, and Reigate; and, should they be successful in obtaining premises for the manufacture of Grey-stone Lime, they will resume the trade in London and on the Railways as usual, and hope for a continuance of that support they have hitherto so generously afforded them.—Address,
HALL, BROTHERS, Croydon, or Redhill, Surrey.

BUILDER'S JOBBING BUSINESS WANTED, or SITUATION as FOREMAN, with view to Partnership.—Address, S. M. 8, Shafte-bury-terrace Pimlico, W.

TO BE SOLD, the GOODWILL, STOCK, and FIXTURES of an old-established PLUMBER, PAINTER, and G. VIER'S BUSINESS, in the Commissioner of the Lesser Rent law). The shop has always done a good jobbing plumbing trade with a good-class customer. Only reason for present proprietor leaving is continued illness and being ordered to go to a more southern situation. The situation of the shop is good, and a few mths from London. Apply to Mr. ED. STOKES, High-street, Wandsworth.

TO CARPENTERS, BUILDERS, UNDERTAKERS, and OTHERS.—GUILDFORD, SURREY.—TO BE LET, with immediate possession, a genuine, good, old-established CARPENTER'S and BUILDER'S BUSINESS, doing a good respectable trade, and very convenient premises, with every facility for extending the business. The present owner's health is the sole reason of his relinquishing the business.—For particulars, inquire of Mr DRURY, Auctioneer, &c, Guildford.

POLONCEAU and SEYSSEL ASPHALTE.

ESTABLISHED 1838

For covering Flat Roofs, Paving and Flooring of every description, especially in places subject to damp and vermin. This Asphalte is now extensively used for paving Stables (as shown above), the absence of joints preventing the generation of ammonia. For Estimates and Prices, &c. &c. apply to JOHN PILKINGTON, 15, Fish street-hill London, E.C.

Country Builders supplied with Asphalte in Bulk for covering Footings, Barn Floors, &c. with instructions to lay it down.

MONEY.—IMMEDIATE CASH ADVANCES on FREEHOLD and LEASEHOLD PROPERTY, REVERSIONS and ANNUITIES, WINE, SPIRIT, and TIMBER WARRANTS, FURNITURE, SHARES, &c. Mr. RICHARD CROSSLEY, 17, Moorgate-street, Bank, E.C.

TEN THOUSAND POUNDS READY TO BE ADVANCED by the TEMPERANCE PERMANENT LAND AND BUILDING SOCIETY, on Freehold or Leasehold Property, for any period of years not exceeding fifteen, the mortgage being redeemable by equal monthly instalments. Interest (in addition to a small premium), 5 per cent. on the balance each year.—Apply to HENRY J. PHILLIPS, Secretary. Offices, 34, Moorgate-street, London, E.C.

NOTE.—More than a quarter of a million pounds sterling have been advanced upon house property alone.

MONEY on FREEHOLD and LEASEHOLD PROPERTY, by the MUTUAL LOAN FUND ASSOCIATION (Incorporated by Act of Parliament, 1850), 14, RUSSELL STREET, Covent Garden, W.C. Advances from 100l. to 1,000l. upon Freehold and Leasehold Property for any term up to ten years Mortgages redeemed, and the advance can be repaid or easy instalments. Facilities afforded to tenants to purchase the houses they occupy, and the repayment of the advance taken as rent. Greater advantages are offered to borrowers than in building societies, there being no shares to subscribe for, or competition for an advance, and no deduction from the loan. No preliminary fees. Prospectus and forms of proposal sent on receipt of a directed stamped envelope. EDWARD HARPER, Secretary.

A FREEHOLD MANSION TO BE SOLD. The elegant Furniture may be had at a valuation. There are four reception-rooms, two being 30 feet in length; eleven best bedrooms; stabling for eight horses and coachhouses for four carriages; suitable servants' offices; extensive ornamental grounds, with greenhouses, in all 28 acres; gravelly soil; near Sunningdale Station, South Western Railway, half a mile from Windsor Great Park, and fifty minutes from the Waterloo Station.—Apply to J. MAY, Esq. Solicitor, 67, Russell-square.

LORDSHIP ROAD, Stoke Newington.—TO BE LET, on Building Leases of 80 years (at low ground rents), several PLOTS, eligible for semi-detached villas and terraces.—Apply to Mr. ROUDA, Bouverie-road, Church-street, Stoke Newington.—N.B. Bricks delivered on the estate at low prices.

BUILDING LAND in the best part of St. John's Wood.—A choice PLOT, with Road and Sewer along the whole frontage, surrounded by finished property of an excellent description, occupied by first-class tenants, TO BE LET at a moderate rent.—Apply to IFOLD & HUGHES, 33, Manchester-street, W.

VALUABLE PREMISES.—Large, open SPACE, with an area of 1,330 square yards, TO BE LET, immediately, with or without water communication. There is a frontage of 167 feet to the road, situate in a main thoroughfare, one mile north of the Bank. The extension of railway and city improvements, causing such a consequent scarcity of premises, render these extremely valuable.—Apply to E. & W. STURGE, Bridge-wharf, City-road, E.C.

DEPTFORD, Kent.—To BUILDERS, ENGINEERS, SHIPWRIGHTS, SMITHS, MANUFACTURERS, and Others requiring or desiring commodious Tenements or Residences for their workmen, or to societies or individuals wishing to provide improved Dwellings for the Working Classes.—The Corporation of Trinity House, having otherwise provided for the inmates of their Establishment known as the Lower Ground Almshouses, at the Stowage, Deptford, comprising Twenty-six distinct Dwellings, hereby give notice, that they are willing to receive TENDERS for LETTING the said HOUSES on a repairing lease for 21 years, or more, as may be agreed. Each house consists of a basement, ground, and chamber story; five having yards and additional offices; and the others can readily have every necessary accommodation added to them. The whole is approached from the street by a centre gateway, and is inclosed within itself as a distinct precinct. These houses are situated in the centre of the large manufacturing district on the South side of the Thames. They are also, from the cheapness of the crossing at the ferry, very conveniently situated in relation to the large district of the manufactories on the opposite side of the river, from Mill wall and the Isle of Dogs to the localities adjoining. For permission to view, apply to Mr. NORTHWOOD, No. 1, on the Premises. The whole are to be let by Tender, in One Lot, and MONDAY, the 30th of MAY next, is the day fixed by the Corporation for receiving the Tenders.—For further particulars apply at the Offices of Mr. RICHARD SUTER, Architect and Surveyor, 25, Gracechurch-street, E.C. and where a plan of the Property may be seen. P. H. BERTHON, Secretary. Trinity House, March 28, 1864.

FIRE BRICK and CEMENT WORKS, WOODEN BOX, near BURTON-ON-TRENT. Established 1787. JOHN KNOWLES, HAWLEY NEW WHARF, HAMPSTEAD ROAD, CAMDEN TOWN, N.W. Fire Bricks, Tiles, and Lumps of all sizes, or made to order on short notice. Crucible and Cementing Clay, Wedging and Loam for Exportation, EVERY ARTICLE MANUFACTURED AT THE ABOVE WORKS. N.B. These goods are supplied to the best-stirred Smelting, Armour Plate, and Crucible Works in the World, to which references can be given on application.

TO BRICKMAKERS.—All Parties who BURN BRICKS in CLAMPS are invited to inspect the NEW MODE of SETTING, patented by Mr ROBERT WHITE, and which may be seen in operation at the Brickfields of J. B. WHITE & BROTHERS, Erith, Kent. The advantages of this plan are two fold: 1st. Nearly all the bricks are burnt into stocks, and the yield of inferior bricks is reduced from 45 to about 10 per cent of the total make, which in itself represents a large permanent saving. 2nd. The bricks are so much improved in colour and soundness as to give them a considerable additional value in the market over common stocks. Licenses for use of the Patent granted to Brickmakers, on application to the Patentees, 17, Millbank-street, Westminster.

BRICKS, PANTILES, AND PAVINGS. J. H. ANDREWS, Wisbech, offers Red Pantiles, at 47s. 6d. per 1,000 " 9-inch Pavings, 55s. per 1,000. " Finer Bricks, 40s. per 1,000 White Kiln ditto, 40s. per 1,000 Ridge Tiles, at 70s. per 120 lineal. Cash Prices. Delivered in Trucks in London, or along the Line on the Great Eastern Railway. Quantities may be delivered by Vessel at any of the Thames Wharfs.

RED BRICKS, STOCKS, PAVIORS, PALE and BRIGHT YELLOW CUTTERS.—ROBERT LITTLE, Brickmaker, Slough, begs most firm Builders and the Trade generally that he is now prepared to supply any quantity of good well burnt RED BRICKS (either plain, splay, or to bond), suitable for facings. Mr. LITTLE is able to Load Bricks for London, or any other part, by either the Great or South Western Railways. The Bricks may be seen, and prices obtained, either at the Field, Slough, or on application to R. LITTLE, Great Western Railway, Windsor

BRICK MAKING and BRICK PRESSING MACHINES, DRAIN PIPE and SEWAGE PIPE MACHINES, with every requisite for the MANUFACTURE of BRICKS and PIPES, Clay Crushing, Pugging, and Screening Machines These Machines have obtained the Prize or Commendation at every meeting of the Royal Agricultural Society of England, at which they have been exhibited for the last 15 years. OFFICES—23, Great George-street, Westminster.
WORKS—Wharf-road, City-road, N. and East Greenwich, S.E.

This Company has been formed for the purpose of making and maintaining telegraphic lines of communication, both submarine and on land, in every part of the world.

The failing of intercourse by such telegraphic communication, now in such extensive operation, has afforded to the public in its varied commercial, political, commercial, and social, has rendered that which was but a few years ago regarded merely as a most costly experiment, absolutely necessary for the purposes of our social system, and a highly remunerative investment. It has been found that, as in the case of railways (although to a much greater extent), telegraphic cables have uniformly developed a constantly increasing traffic, with this remarkable and special feature, that the more distant the points brought into communication, the greater the proportion of increase done.

Experience has proved that increasing receipts from the working of submarine cables bring with them only a trifling proportionate increase in the annual working expenses.

Messrs. Glass, Elliot, & Company and the Gutta Percha Company have hitherto together had the principal share in the manufacture of cables and telegraphic lines.

The form, or form, which have undertaken the manufacture, laying down, and maintenance of the cables, have hitherto obtained the greater part of the orders from the Gutta Percha Company, which has, in this branch of its trade, confined itself entirely to the production of the gutta percha.

Messrs. Glass, Elliot, & Company have, during the last ten years, manufactured and laid down in different parts of the world no less than a thousand miles of Submarine Telegraph Cable, while the Gutta Percha Company have, during a like period, manufactured upwards of three miles of insulated wires for submarine Telegraph Cables now in work.

It has been estimated that the manufacture of entire cables could be more speedily and profitably carried on by uniting in one establishment the manufacture of the outer cable and wire, and the execution of the whole of the work, hitherto separately executed by the Gutta Percha Company, and with this view contracts have been entered into for the purchase of the entire machinery, premises, land, patents, stock, goodwill, &c. of the Gutta Percha Company, by Messrs. Glass, Elliot, & Company; and it is from these agreed to transfer to this Company at the cost price to them, the works so acquired. A contract has also been concluded with Messrs. Glass, Elliot, & Company, for the acquisition by this Company of their manufactory, premises, plant, stock, and business, the consideration being paid, to the extent of 150,000l. in fully paid-up shares of the Company. Upon these completed arrangements the Company will enter into possession of the above-named businesses, and be entitled to their profits, as from the 1st of January last.

The Company's business will be conducted under the personal superintendence of Mr. Henry Clay and Mr. Glass, as Managing Directors, assisted by the staff at present employed under them.

The agreement with Messrs. Glass, Elliot, & Company, provides for the assignment, with the consent of the Treasury, to the Company of the benefit held by the Firm of the Submarine Telegraph between Malta and Alexandria. The Alexandria, Cairo, and Suez Telegraph held by Messrs. Glass, Elliot, & Company, under agreement with the Telegraph Administration of Egypt, is also comprised in the arrangement.

The large profits which have hitherto been realised by both of the above firms, and the prospect which exists of considerable extension of the business, justify the expectation of a large return to the Shareholders, independently of the profits arising from the working of the telegraph lines at present referred to.

Copies of the above contracts, together with the Articles of Association of the Company, may be inspected at the Solicitors' offices.

Applications for shares must be made on the annexed form; but no application will be considered unless the deposit of 1l. per share has been previously paid to the Bankers of the Company. This deposit will be returned if no allotment is made in the applicant, and if an allotment is made, it will be applied towards the payment then due.

An option will be given to the Subscriber of taking one-fourth of the shares allotted to him, fully Paid up Shares.

Prospectuses and Forms of Application for Shares may be obtained at the Offices of the Company, and of the Brokers

London, 7th April, 1864.

No.

FORM OF APPLICATION FOR SHARES.

(This Form should be presented entire to the Bankers of the Company, who will detach the receipt, and return it to the Applicant.)

To the Directors of the Telegraph Construction and Maintenance Company, Limited.

VICTORIA MARBLE WORKS,
38, LOWER BELGRAVE PLACE, adjoining the Victoria Railway Station, and at Commercial road, Pimlico, London.
JOHN WREN

Begs to inform Architects, Sculptors, Builders, &c. he has OPENED the above-extensive Premises with convenient SHOW-ROOMS, well stocked with CHIMNEY-PIECES of the most modern designs and superior workmanship, and at the lowest possible prices.

N.B.—Estimates given. Country and foreign orders executed with promptness and personal attention.

LONDON and WESTMINSTER MARBLE WORKS.—The attention of Builders and the Public is invited to JOSEPH HADFIELD'S CHOICE SELECTION of CHIMNEY-PIECES, in all the VARIOUS FOREIGN and BRITISH MARBLES, which he offers on MOST REASONABLE PRICES.—LONDON and WESTMINSTER MARBLE WORKS, No. 16, Earl-street, Westminster, S.W. and at Sheffield.

LITTLE CASTERTON FREESTONE.
Apply, for prices, &c. to
OCTAVIUS N. SIMPSON, STAMFORD;
and see Specimens at the Office of
Messrs. FINDER SIMPSON & SONS, 29, Savile-row, London, and at the Museum of Practical Geology, Jermyn-street, W.

This stone (which is a perfect oolite) is raised in blocks of any portable size, and is about four feet thick in the bed. It will stand ANY WEATHER, is much used for water-works, and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed-wise. It works freely with a tooth-saw, and is wrought at a cheaper rate than any stone in the kingdom.

*** The above WEATHER STONE is 1s. 9d. per cubic foot, delivered in London.

TO ARCHITECTS AND SURVEYORS.
BILLS of QUANTITIES, SPECIFICATIONS, DRAWINGS, &c. neatly and expeditiously Lithographed and Copied. A numerous staff of hands always engaged. Prompt attention to Country Orders. Specimens and Price list post free.
GUYER & CO.
LITHOGRAPHERS, STATIONERS, and PRINTERS,
4 & 5, AGAR-STREET, STRAND, W.C.

JOHN ARCHBUTT & SONS,
20, WESTMINSTER BRIDGE ROAD, LAMBETH,
Near Astley's Theatre.
Respectfully inform the Profession that their Illustrated Price-List will be forwarded free on application. The prices will be found remarkably low. Every article warranted. Second-hand Instruments of all kinds, by the best makers, always in stock.

GUTTA-PERCHA MILL-BANDS.—The Gutta Percha Company beg to state that the increasing demand for the Gutta-Percha Driving Bands, Lathestraps, &c. fully justifies the strong recommendations they have everywhere received. Their durability and strength, permanent contractability and uniformity of substance; their non-susceptibility of injury from contact with oils, grease, acids, alkalies, or water; and the facility with which they can be joined or made in bands of from 200 to 300 feet long, render them superior to leather for almost all working purposes, and decidedly more economical. Every variety of Gutta-Percha Articles, such as Tubing, Soles, Pump-buckets, Fire-buckets, Boxes, Union joints, Flasks, Bottles, Bowls, Toilet-trays, Curtain-rings, Galvanic Batteries, Talbotype Trays, &c. &c. manufactured by the Gutta-Percha Company, and sold by their Wholesale Dealers in town and country.

ESTABLISHED 1844.
JOHN BOARD & Co.'s CEMENT and LIAS LIME WORKS, Dunball (near Bridgwater); Office, Queen-street, Bridgwater. JOHN BOARD & Co. beg to inform Builders, Contractors, and Merchants that they continue to manufacture CEMENTS and BLUE LIAS LIME, at Dunball, near Bridgwater, and from increased appliances to their works, are enabled to execute orders for the same to almost any extent.

HYDRAULIC LIME and ROMAN CEMENT, manufactured by LLOYD JONES & CO. Halkin Works, Holywell, Flintshire. The Halkin Hydraulic Lime is the same as used in the construction of the Liverpool Docks, Manchester, and various waterworks, colleries, and mines throughout the country, being so long celebrated for its strong cementitious and connecting powers for masonry in water. Can be supplied by rail or water to any part of the kingdom, either in lump (loose), or ground, and in casks and bags. The limestone can be had in full cargoes, also their cement in barrels, which is of a very superior quality and warranted pure. Orders to be accompanied by a banker's reference. Apply at the Works; or to R. & W. AARON, Agents, 66, South John-street, Liverpool

PURE HYDRAULIC LIME, Manufactured from the best HALKIN MOUNTAIN LIMESTONE, same as supplied for the construction of the Liverpool and Birkenhead Docks.
The HOLYWELL LIMESTONE COMPANY are prepared to deliver the above, in lump or ground, packed in bags, into waggons, at the Holywell Station of the Chester and Holyhead Railway, or on board vessels at Greenfield Wharf, Chester River.
Prices and particulars furnished on application to Mr. EVAN EVANS, Manager, Parry's Mine Works, Holywell, Flintshire.
The Company guarantee the quality of the Lime to be equal to that used by the Engineer of the Liverpool and Birkenhead Docks.
Agents wanted. No applications attended to without a banker's reference.

INTERNATIONAL EXHIBITION, 1862. CLASS 10, No. 2268.

The only MEDAL for "STONEWARE PIPES" has been awarded to

HENRY DOULTON & CO., LAMBETH.

Extract from Jurors' Report:—

"H. Doulton & Co.—Stoneware Pipes, &c. excellence of manufacture and lowness of price."

GLAZED STONEWARE DRAIN PIPES, TERRA-COTTA CHIMNEY TOPS, &c. &c.

Supplied on the lowest terms, direct from

H. D. & CO.'S MANUFACTORIES, HIGH-STREET, LAMBETH, LONDON; ROWLEY REGIS, STAFFORDSHIRE; and SMETHWICK, near BIRMINGHAM.

3s 9d.

INTERNATIONAL EXHIBITION, 1862.

CLASS 35, NO. 6849.

The only Medal "for Stone Ware" has been awarded to

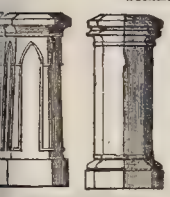
DOULTON & WATTS, LAMBETH POTTERY,

LONDON.

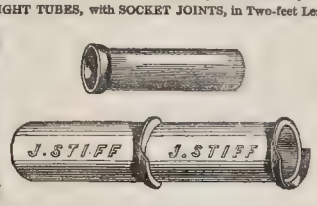
In expectation of a greatly increased sale, D. & W. have determined to introduce the annexed pattern of their ENAMELLED STONEWARE CLOSET-PANS, at the price of the commonest description of earthenware.

Experience has shown that this shape is the most simple and efficient, and that in strength, durability, and cleanliness it cannot be surpassed by the most expensive closets.

FIGURE D STONEWARE CLOSET PAN AND TRAP, 3s. 9d. COMPLETE.



JAMES STIFF & SONS,



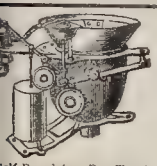
MANUFACTURERS OF GLAZED STONEWARE DRAIN-PIPES, WATER-CLOSET PANS, SINK-TRAPS, INVERT BLOCKS, AND ALL OTHER ARTICLES SUITABLE FOR DRAINAGE PURPOSES; ALSO

IMPERISHABLE TERRA-COTTA CHIMNEY-TOPS, FLUE-PIPES, COPINGS, GARDEN EDGINGS, &c.

LONDON POTTERY, HIGH-STREET, LAMBETH, LONDON.

STRAIGHT TUBES, with SOCKET JOINTS, in Two-feet Lengths.

PAN, 4s. 6d.



TRAP, 2s.

HALF-SOCKET PIPES same prices as the Whole Sockets, by the use of which Drains may be readily examined, and Junctions inserted, in the event of requiring further connections.

Manufacturers also of

LOVEGROVE'S PATENT DOUBLE AND TRIPLE JUNCTIONS AND INSPECTION SHAFTS for small Sewers and Drains, by the use which the Sewers and Drains may be examined and cleansed without disturbing the surface of the ground; adapted also for ventilation Sewers and Drains.

DRAWINGS, WITH PRICES, WILL BE FORWARDED FREE, ON APPLICATION.

THOMAS LAMBERT & SON,

Self-Regulating Pan Closet. Lambert's Ball Valve. High-Pressure Bib and Stop Valve.

PATENTEES and MANUFACTURERS, SHORT STREET, NEW CUT, LAMBETH.

T. L. & SON find it necessary to state that their manufactures have their NAME legibly marked thereon.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.

ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. etc., sold under the name of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.

CHEAPNESS. Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much face as three hundred weight of white lead and twelve gallons of oil.

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,

WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 42 lbs. to square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor.

INODOROUS FELT, for damp walls or floors, under carpets and floor-cloths. Price ONE PENNY per Square Foot.

DRY HAIR FELT, for Covering steam Boilers, Pipes, &c. preventing the radiation of Heat, saving 25 per cent. of Fuel, and deadening Sound.

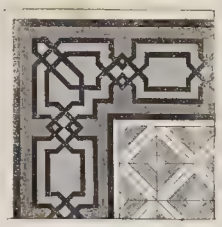
CROGGON and CO'S PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c. and

Samples, testimonials, and full instructions, on application to

CROGGON and CO. 2, DOWGATE-HILL, London; and 2, GOREE PIAZZA, Liverpool.

J. TYLOR & SONS' PATENT

REGULATOR WATER-CLOSETS.



Valve. Pan.

The Regulator Valve gives perfect control over the supply of water to each closet, so that, however small the fall of water, perfect flushing is insured. Any number can be worked by one supply-pipe. No extern-valves, cranks, or wires required. The Closets can be seen in action at the Manufactory, and Illustrated Catalogues had on application to the Manufacturers, J. TYLOR & SONS, Warwick-lane, Newgate-street, London.

UNDER THE PATRONAGE OF H.M. THE QUEEN.

THE LONDON PARQUETRY WORKS.

The first Establishment founded in England (in 1842) for the exclusive manufacture of SOLID and PLATED PARQUET FLOORS and BORDERS, CEILINGS, and WALL DECORATIONS; and SOLE PATENTEES of the only system adapted to the English climate whereby the effects of DRY ROT, SHRINKAGE, and WARPING (so common to work manufactured in foreign climates) are EFFECTUALLY PREVENTED.—For Designs, Estimates, and List of above 200 Floors, &c. apply to THE LONDON PARQUETRY WORKS, Grove-gate, Camberwell; or their sole Agents, MESSRS. GILLOW & CO. 176, Oxford-street.

SOLID PARQUET FLOORS, ARROWSMITH'S PATENTED,

From 1s. per foot, in various woods, inch thick, grooved, ongued, and keyed together, not pierced

For Halls, Staircases, Corridors, Reception-rooms, Libraries, Billiard and Ball Rooms, Picture Galleries, Panelling, Bodoir Ceilings, Borders to Carpets, Bay Windows, Chancels of Churches, &c.

SHOW ROOMS, 80, New Bond-street W.

PARQUETS SOLIDAIRES.—HOWARD

& SONS, 26 and 27, Berners-street, are prepared to supply Machine-made Patented Solid PARQUET FLOORS 50 per cent. cheaper than they have been yet offered. Illustrated Catalogues plans, and estimates free.

TERRA COTTA and Fine STONEWARE

POTTERY, warranted to stand Frost.

JOHN M BLASHFIELD, STAMFORD POTTERY, STAMFORD, LINCOLNSHIRE, has greatly improved and economised the manufacture of TERRA COTTA and Fine STONEWARE for ARCHITECTURAL PURPOSES. He is able to make it of various new colours, so as to harmonize with Marble, Portland, and other Stones, and equal in hardness to Granite.

A Medal at the International Exhibition was awarded, in Class 10, Section C, Architectural Objects, for "Perfection in manufacture and beauty of form." A Medal was also awarded for "Terra'Cotta."

Moulded Bricks, String Courses, Copings, Cills, Tracery, Balusters, Capitals, Crosses, Terminals, Vases, Statues, Brackets, Consoles, Garden Edging, Guttering, six, nine, and twelve inch Paving Tiles, &c. &c.

Also Plain and Mosaic Pavements for Halls, Churches, Conservatories, &c. in all colours.

London Office, 377, Oxford-street, W.

PRIZE MEDAL TO MAW & CO. INTERNATIONAL EXHIBITION, 1862.

IMPERISHABLE TESSELATED

PAVEMENTS, combining a highly decorative and economical substitute for ordinary floors of their perishable coverings. MAW & CO.'S Pattern book, designed by M. Digby Wyatt, esq. together with a special design and estimate of cost adapted to any given dimensions of hall, passage, conservatory, verandah, friezes, &c. will be sent on application to Benthall Works, Broseley, Salop.

May be seen at the Exhibition of Building Inventions, &c. now open at the Galleries of the Architectural Exhibition, 9, Conduit-street, free.

London Agents—W. B. SIMPSON & SONS, 456, West Strand, who have on view a great variety of Specimens of the Pavements.

PEAKE'S TERRO-METALLIC TILES,

PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21 Wharf, Macclesfield-street North, City-road Basin, N. Swiftly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and fully, that the "Reports of the Juries," page 881, of the Great Exhibition, 1851, note the grant of a First-class Medal and rank the Manufactories known so long as "The Tilaries," Tunstall, Staffordshire, as the first of the kind in the world.

TWO PRIZE MEDALS AT THE INTERNATIONAL EXHIBITION

MAGNUS'S ENAMELLED SLATE

obtained the Medal of the Society of Arts; the Prize Medal at the Great Exhibition, 1851; Two First-class Medals at the Paris Exhibition; and Two Prize Medals at the International Exhibition of 1862.

Trashy imitations of this beautiful material are being palmed upon the public. Architects are therefore requested to see that the name of "MAGNUS" is upon each article.

Chimney-pieces, Billiard tables, Table-tops, Baths, Wall-linings, &c. a New Illustrated Catalogue of which can be had at the Finnish Slate Works, 39 and 40, Upper Belgrave-place, Pimlico, S.W.

TARPAULINS, MARQUEES, &c.

LANCASHIRE.—OSWALDTWISLE, near BLACKBURN.—SALE of Valuable and Extensive FREEHOLD ESTATES.—TO BE SOLD by AUCTION, by

MR. GRUNDY, on THURSDAY, the 28th day of APRIL, 1864, at the BULL HOTEL, in Blackburn, in the County Palatine of Lancaster, at FOUR o'clock in the afternoon, subject to the conditions to be then and there produced by the Vendors, and in the following, or such other lot or lots as may be agreed upon at the time of sale

Lot 1.—All that Close, Piece, or Parcel of MEADOW LAND (part of the Salt pie Farm), situate at Smalley Brook, within the Township of Oswaldtwisle, in the Parish of Whalley and County Palatine of Lancaster, bounded on or towards the south by the public highway leading from Oswaldtwisle to Accrington, on or towards the west by the stream or brook called Smalley Brook, and containing in statute measure 2a. 1r. 14p. or thereabouts, and fully delineated and described in the plan thereof (No. 2) hereunder and hereafter referred to.

Lot 2.—All that Farm and Tenement known by the name of the Falls Farm, situate in the township of Oswaldtwisle aforesaid, on the north-east side of the highway leading from Blackburn to Little Moor End, on the north-east by the lower Stanhill Farm, and on the south by the stream or brook known as Smalley Brook; consisting of the farmhouse, farm, and other buildings, and the several closes, pieces, or parcels of meadow and pasture land, fully and satisfactorily occupied therewith as the same are more particularly described in the plan thereof (No. 2) hereunder referred to, and containing together in statute measure 12a. 1r. 9p.

Lot 3.—All that Farm and Tenement known by the name of The Lower Stanhill Farm, situate in the township of Oswaldtwisle aforesaid, on the north-east side of the highway leading from Blackburn to Little Moor End, on the west by the highway leading from Blackburn to Little Moor End, on the north east by the lower Stanhill Farm, and on the south by the stream or brook known as Smalley Brook; consisting of the farmhouse, farm, and other buildings, and the several closes, pieces, or parcels of meadow and pasture land, fully occupied therewith as the same are more particularly described in the plan thereof (No. 2) hereunder and hereafter referred to, and containing together in statute measure 12a. 1r. 9p.

Lot 4.—All that Farm and Tenement known by the name of The Fountains Farm, situate in the township of Oswaldtwisle aforesaid, bounded on or towards the north by Aspen-farm, on the east by a pipe to feed on the west and south by Lower Stanhill Farm and part of Wheatley Mills, and on the north-eastern extremity by the turnpike-road leading (at that point a small portion of this lot) leading from Blackburn to Accrington, and consisting of the farm-house, farm, and other buildings, and the several closes, pieces or parcels of fine fertile pasture land delineated and described in the plan thereof (No. 2) hereunder referred to, and containing together in statute measure 20a. 0r. 29p.

Lot 5.—All that Farm and Tenement (forming part of the Stanhill Farm) situate in the township of Oswaldtwisle aforesaid, on the north-west side of and bounding on the south west side by the turnpike-road leading from Blackburn to Accrington; consisting of the several closes, pieces or parcels of land, fully delineated and described in the plan thereof (No. 2) hereunder referred to, and containing together in statute measure 18a. 1r. 25p.

Lot 6.—All that Farm and Tenement known by the name of the Higher Stanhill Farm, situate in the township of Oswaldtwisle aforesaid, and on the south-west side of the highway leading from Blackburn to Accrington, bounded partly on the north by the said turnpike-road leading from Blackburn, on the south by the highway leading from Blackburn to Little Moor End, on the east by Stanhill Farm, and on the west by part of the farmhouse, farm and other buildings, and the several closes, pieces, parcels of meadow and pasture land, fully occupied therewith as the same are more particularly described in the plan thereof (No. 2) hereunder referred to, and containing together in statute measure 20a. 0r. 29p.

Lot 7.—All that Farm and Tenement known by the name of the Higher Stanhill Farm, situate in the township of Oswaldtwisle aforesaid, on the west side of the highway leading from Blackburn to Little Moor End, bounded on or towards the north by the said highway, on or towards the south by the Rushes Farm, and on or towards the west by property of John Reddish, esq. and others, and on the east by part of the farmhouse, farm, and other buildings and the several closes, pieces, or parcels of meadow and pasture land, fully delineated and described in the plan thereof (No. 2), hereunder referred to, and containing together 16a. 1r. 30p.

Lot 8.—All that Farm and Tenement known by the name of the Rushes Farm, situate in the township of Oswaldtwisle aforesaid, on the south west side of the highway leading from Blackburn to Little Moor End, bounded on or towards the north by the said highway, on or towards the south by the Rushes Farm, and on or towards the west by property of John Reddish, esq. and others, and on the east by part of the farmhouse, farm, and other buildings and the several closes, pieces, or parcels of meadow and pasture land, fully delineated and described in the plan thereof (No. 2), hereunder referred to, and containing together 16a. 1r. 30p.

Lot 9.—All that Farm and Tenement known by the name of the Higher Stanhill Farm, situate in the township of Oswaldtwisle aforesaid, on the south west side of the highway leading from Blackburn to Little Moor End, bounded on or towards the north by the said highway, on or towards the south east by the Rushes Farm, and on or towards the north-west and north-east by land of John Reddish, esq. and others and consisting of the Farm House, Farm, and other Buildings, and the several Closes, Pieces, or Parcels of Meadow and Pasture Land, fully coloured and described in the plan thereof (No. 11) hereafter referred to, and containing together 16a. 1r. 30p.

Lot 10.—All the several Closes, Pieces, or Parcels of Meadow and Pasture Land, situate lying and being within the township of Oswaldtwisle aforesaid, known by the several names and containing in statute measure the several quantities following:—That is to say, the Old Meadow (including the sites of Grove House, Stables, Shippons, Plantation, Gardens, Coachhouse, Stable, Shippons, Cottages, Out buildings connected with Grove House) 2a. 1r. 14p. or thereabouts; Far Croft, 1a. 0r. 15p.; and the Chapel Field, 1a. 0r. 12p.

Also all that modern capital Family Residence erected on part of the before mentioned land, with the Shrubberies, Plantation, Gardens, Coachhouse, Stable, Shippons, Cottages, and Outbuildings connected with Grove House, and now in the occupation of Messrs. Wesfall Brothers, Whitewash Mills, Oswaldtwisle aforesaid.

Lot 11.—All that Farm and Tenement known by the name of The Fountains Farm, situate in the township of Oswaldtwisle aforesaid, on the north-east side of and bounding on the south west side by the turnpike-road leading from Blackburn to Accrington, and on the west by the public highway leading from Blackburn to Little Moor End, on the north by the Fountains Farm, on the east by Whitewash Mills, and on the north-west by a way or road leading from the said highway to Aspen-farm; consisting of the farmhouse, farm, and other buildings, and the several closes, pieces or parcels of meadow and pasture land, fully delineated and described in the plan thereof (No. 2) hereunder referred to, and containing together in statute measure 20a. 0r. 29p.

Lot 12.—All that Farm and Tenement known by the name of The Lower Stanhill Farm, situate in the township of Oswaldtwisle aforesaid, on the north-east side of the highway leading from Blackburn to Little Moor End, on the west by the highway leading from Blackburn to Little Moor End, on the north east by the lower Stanhill Farm, and on the south by the stream or brook known as Smalley Brook; consisting of the farmhouse, farm, and other buildings, and the several closes, pieces, or parcels of meadow and pasture land, fully delineated and described in the plan thereof (No. 2) hereunder referred to, and containing together in statute measure 12a. 1r. 9p.

Lot 13.—All that Farm and Tenement known by the name of The Falls Farm, situate in the township of Oswaldtwisle aforesaid, on the north-east side of the highway leading from Blackburn to Little Moor End, on the west by the highway leading from Blackburn to Little Moor End, on the north east by the lower Stanhill Farm, and on the south by the stream or brook known as Smalley Brook; consisting of the farmhouse, farm, and other buildings, and the several closes, pieces, or parcels of meadow and pasture land, fully delineated and described in the plan thereof (No. 2) hereunder and hereafter referred to, and containing together in statute measure 12a. 1r. 9p.

Lot 14.—All that Farm and Tenement known by the name of the Salt pie Farm, situate in the township of Oswaldtwisle aforesaid, on the south west side of the highway leading from Blackburn to Little Moor End, bounded on or towards the north by the said highway, on or towards the south east by the Rushes Farm, and on or towards the west by property of John Reddish, esq. and others, and on the east by part of the farmhouse, farm, and other buildings and the several closes, pieces, or parcels of meadow and pasture land, fully delineated and described in the plan thereof (No. 2), hereunder referred to, and containing together 16a. 1r. 30p.

Lot 15.—All that Farm and Tenement known by the name of the Higher Stanhill Farm, situate in the township of Oswaldtwisle aforesaid, on the south-west side of the highway leading from Blackburn to Little Moor End, bounded on or towards the north by the said highway, on or towards the south east by the Rushes Farm, and on or towards the north-west and north-east by land of John Reddish, esq. and others and consisting of the Farm House, Farm, and other Buildings, and the several Closes, Pieces, or Parcels of Meadow and Pasture Land, fully coloured and described in the plan thereof (No. 11) hereafter referred to, and containing together 16a. 1r. 30p.

Lot 16.—All the several Closes, Pieces, or Parcels of Meadow and Pasture Land, situate lying and being within the township of Oswaldtwisle aforesaid, known by the several names and containing in statute measure the several quantities following:—That is to say, the Old Meadow (including the sites of Grove House, Stables, Shippons, Cottages, Out buildings, Gardens, Coachhouse, Stable, Shippons, Cottages, Out buildings connected with Grove House) 2a. 1r. 14p. or thereabouts; Far Croft, 1a. 0r. 15p.; and the Chapel Field, 1a. 0r. 12p.

Also all that modern capital Family Residence erected on part of the before mentioned land, with the Shrubberies, Plantation, Gardens, Coachhouse, Stable, Shippons, Cottages, and Outbuildings connected with Grove House, and now in the occupation of Messrs. Wesfall Brothers, Whitewash Mills, Oswaldtwisle aforesaid.

Grove House is an excellent family residence, containing spacious and well-proportioned dining-room, drawing-room, breakfast-room, and library; two entrance halls, seven bed rooms, bathroom, water-closet, &c.; kitchen, scullery, cellars, entrance hall, and convenient staircase. The several rooms have been carefully fitted up with and now contain expensive and handsome grates; the whole premises are well supplied with hard and soft water, and are replete with every convenience and appendage usually to be found in extensive family residences.

The whole of the before-mentioned farms and properties are freehold of inheritance, and will be Sold subject to the reservation of the coal within and under the said farms and premises.

The tenants of the several Farms and Properties have instructions to show their respective holdings, and printed particulars, with lithographic plans of each holding, may be had on application to Messrs. WESFALL BROTHERS, Whitewash Mills, Oswaldtwisle aforesaid; or to the Auctioneer, at his Office, No. 86, King-street, Manchester, or on application at the Offices of Messrs. ROBINSON & SON, Solicitors, Blackburn; or Mr. GEO. M'CALL, Land and Engineering Surveyor, Blackburn.

NOTICE.
BROWN & GREEN'S KITCHEN RANGE WAREHOUSE is now REMOVED to the NEW PREMISES, 72–74, Bishopsgate-street Within, a few doors from the late Address, at No. 81. These afford accommodation for a still larger stock of their Patent Prize Medal Ranges and Stoves, Register Grates, and Cooking Utensils, to meet the great public demand, and also for the consequent more extensive execution, by the manufacturers themselves, of all descriptions of hot water, bath, laundry, and steam work.
72–74, Bishopsgate-street Within, November, 1863.

ROYAL MANCHESTER INSTITUTION. EXHIBITION OF MODERN PICTURES AND OTHER WORKS OF ART. Intending Contributors are informed that the EXHIBITION of MODERN PICTURES in OIL and WATER-COLOURS, SPECIMENS of SCULPTURE and CASTS and ARCHITECTURAL DESIGNS, will be opened as soon as practicable after the closing of the Royal Academy, and that all Works of Art must be sent so as to arrive not later than the 27th of AUGUST. Pictures, &c. from London will be forwarded by Mr. JOSEPH GREEN, 14, Charles-street, Middlesex Hospital, if delivered to him before the 3rd AUGUST, by Artists who have received the Invitation Circular; from other places, Artists who have also received such circular are requested to send them by the most convenient and least expensive conveyance. Works sent by other parties must be carriage paid. Contributions to this Exhibition will not be confined to Artists alone, but will be extended to the admission of works from private individuals, and from dealers. The Council offer a prize of Fifty Guineas to the Artist of the best picture exhibited during the whole period of the exhibition, provided it has been painted within two years; but they reserve the power of withholding the prize should there be no work of sufficient merit in the collection. A separate collection will be formed of pictures lent by private individuals for exhibition during a shorter period and contributions to this collection are respectfully invited from the possessors of private galleries. The pictures in this collection will not enter into competition for the prize.
THOS. WORTHINGTON, Hon. Sec.
Royal Manchester Institution, April 1864.

MARYLEBONE AND WEST LONDON SCHOOL OF ART.
204, Great Portland-street, Portland-place, W.
President: A. J. B. BERESFORD-HOPE, Esq. M.A. D.C.L. &c. &c.
Treasurer: PETER GRAHAM, Esq.
THE LADIES' MORNING CLASSES meet on TUESDAYS and FRIDAYS at TEN o'clock. Prospectuses on application. Evening Classes as usual.

BILLING'S PATENTS.—CHIMNEY TERMINALS.—THROAT VALVES.—NOTICE to ARCHITECTS.—The Proprietors of these PATENTS have given the Widow an Interest in the same, and have considerably reduced the prices of the Articles, trusting that by so doing these useful Inventions may be introduced more generally in all new buildings. For prices, apply to the Manager, Mr. TYLER, 12, Abingdon-street, Westminster, who will also afford any information, he having been for many years engaged with the late Mr. BILLING, in the practical curing of Smoky Chimneys.

COMPETITIONS.

BOROUGH of IPSWICH.—To ARCHITECTS.—The Corporation of Ipswich are desirous of receiving DESIGNS for a TOWN HALL, including a Municipal Library. A premium of 100 guineas will be given for the design which in the opinion of the Council is the best; and a premium of 50 guineas for that which in their opinion is the second best. Both the premiated designs are to become the absolute property of the Corporation. The plans, specifications, and estimates must be distinguished by a motto or device, and be accompanied by a sealed envelope, containing the name and address of the competitor, bearing a corresponding motto or device on the plans, &c.—Plans of the site, with printed statements of the rooms and conveniences required, and of the conditions to be observed by competitors, may be had on application to the Town Clerk. The competing designs, &c. must be delivered at the Town Clerk's Office, Museum-street, Ipswich, on or before the 23rd day of MAY next.
Ipswich, March 24, 1864. S. A. NOTCUTT, Town Clerk.

TO ARCHITECTS.
A PREMIUM of 70*l.* will be given for the Best and 30*l.* for the Second-best DESIGN for a COVERED CORN MARKET, and other Buildings, by the Directors of the Hexham Corn Market and Public Buildings Company (Limited). Plans to be sent in on or before the 12th MAY next, the owner of the first premium to furnish a detailed estimate.—All particulars may be known on application to Mr J. OSWALD HEAD, Hexham, the Secretary.

BIRKENHEAD INDUSTRIAL RAGGED SCHOOLS.—The Committee are desirous of receiving PLANS and ELEVATIONS for the Erection of SCHOOLS to accommodate 200 children, of whom 60 boys and 40 girls will be resident. A plan of the site and particulars of the requirements and premiums, with the terms of competition, may be obtained on application by post to the undersigned.
WILLIAM JACKSON, Jun. Honorary Secretary, Birkenhead.

CONTRACTS.

TO BUILDERS.—Persons wishing to TENDER for the RESTORATION and REPITCHING of MIDDLETON CHENEY CHURCH, near Banbury, may see the drawings specifications, and conditions at the National School-room, Middleton Cheney; and any further particulars may be obtained on application to G. G. SCOTT, Esq. R.A. 20, Spring-gardens, London. The Committee will not bind themselves to accept the lowest or any Tender. The contractor will be required to furnish sufficient security for the due performance of the work. Tenders to be sent to the Rev. W. E. BUCKLEY, Middleton Cheney, on or before FRIDAY, the 22nd instant.

THE BOARD of WORKS for the PLUMSTEAD DISTRICT.—To MASONS, PAVIORS, and OTHERS.—These Persons desirous of submitting TENDERS for LAYING DOWN about 4,444 feet run of New CURBING and CHANNELLING to the Road and Footpaths in the Lee Park-road, in the Parish of Lee, within the said District, are hereby requested to deliver the same, at or before FIVE o'clock on the afternoon of THURSDAY, the 21st day of APRIL, at the Office of Mr. F. F. THORNE, in Lee road, Lee, Surveyor, where the plan and specification of such works may be seen, and all further particulars connected therewith may be obtained. The lowest or any Tender will not be necessarily accepted.—By order,
CHARLES AUGUSTIN SMITH, Clerk to the Board.

CONTRACTS.

NOTICE to CONTRACTORS.—Royal Engineer Office, Sheerness, April 8th, 1864.—TENDERS are required for PROVIDING and LAYING NEW CAST-IRON WATER-PIPES from the War Department to the various Barracks, &c. at Sheerness, a distance of 1,500 yards. A plan, showing the direction of the pipes, may be seen, and a specification, with all necessary information, be obtained on application at this Office between TEN and FOUR, from 14th to 23th instant.
The parties tendering will be required to take out their own quantities.
Tenders will not be received later than 28th APRIL instant.
The Secretary of State for War does not bind himself to accept the lowest or any Tender.

WAR DEPARTMENT CONTRACTS.—Builders and such competent persons as are desirous of undertaking the several WORKS and REPAIRS to the FORTIFICATIONS, BARRACKS, and other BUILDINGS, required by the War Department, at the places undermentioned, upon a contract for three years, from the 1st JUNE, 1864, may be furnished with every necessary information respecting the same, on personal application at this Office, for Pembroke Dock and Penally, and at the several Barrack Offices for other stations, between the hours of ELEVEN and THREE each day, Sundays excepted, from the 9th MAY, 1864, after which date no further issues will be made.
Stations for which separate Tenders will be received:—
1. Pembroke Dock, including the various Forts, Towers, and Barracks in Milford Haven.
N.B. Portrooning will form a separate contract from the 1st April, 1865.
2. Penally Barracks and Rifle Range.
3. Newport Barracks.
4. Brecon Barracks.
5. Cardiff Barracks.
6. Munitions Fort and Barrack.
One Contractor only will be accepted for the whole of the trades for each of the above-named stations, but the rates of per centage at which the parties Tender may be different for each trade, at their option, but such rates must be shown in the proper place on each form of Tender.
The Tenders must be delivered on or before the 14th day of MAY, 1864, at the War Office, Pall Mall, London, addressed to "The Director of Contracts," and endorsed, "Tender for Artificers' Work" in the left hand corner of the envelope.
The Secretary of State for War reserves to himself the right of rejecting the whole or any of the Tenders.
Royal Engineer Office, Pembroke Dock, 8th April, 1864.

CROYDON LOCAL BOARD of HEALTH. To CONTRACTORS and OTHERS.—Persons desirous of CONTRACTING with the Croydon Local Board of Health for the EXECUTION of a Length of MAIN SEWER, 3 feet by 2 feet, and the Works thereto belonging, with, at its end Corner, South Norwood, in the County of Surrey; and another length of such Sewer and Outfall Sewers, and the Construction of Filters in duplicate for the filtration of sewage; and also the Erection of a Filter-house and the laying down of land for the purposes of irrigation, at Penge, in the county of Kent, in accordance with the plans and specifications prepared by Mr. BALDWIN LATHAM, C.E. the Engineer for the Croydon Local Board of Health, can inspect the plans and specification at the Office of the said Engineer, at the Town Hall, Croydon, on or after this date. Sealed Tenders, marked "Tender for Norwood Irrigation Scheme," are to be delivered at the Board's Offices, in the Town Hall, Croydon, on or before FOUR o'clock in the afternoon of TUESDAY, the 26th of APRIL next ensuing. The Local Board of Health do not pledge themselves to accept the lowest or any Tender. By order of the Board,
April 2nd, 1864. HENRY RICHARDS, Clerk.

BARNSLEY LOCAL BOARD of HEALTH. WATER WORKS DEPARTMENT—CONTRACT No. 2.—To CONTRACTORS for RESERVOIRS, &c.—The Barnsley Local Board of Health are desirous to receive TENDERS for the formation of a large STORAGE RESERVOIR (of about 60 acres area) to be situated near Ingbirchworth, about two miles from the Penistone Station on the Manchester, Sheffield, and Lincolnshire Railway, in the West Riding of the county of York, together with Compensation Weir, Tunnel, Roads, Filter Beds, and other constructions. Drawings and specifications may be inspected at the Office of Mr. RICHARDSON, surveyor of the said Board, St. Mary's-place, Barnsley; and at the Office of Mr. HAWKSLEY, Civil Engineer, 30, Great George-street, Westminster, on and after the 21st day of MARCH instant, where also bills of quantities and other particulars may be had or obtained, on payment of two guineas for the same. Tender must be delivered at my Office on or before MONDAY, the 18th day of APRIL next, but the Local Board do not pledge themselves to accept the lowest or other Tender.
By order, WM. H. PEACOCK, Clerk to the Local Board.
Barnsley, 4th March, 1864.

BLACKFRIARS BRIDGE. — Notice is hereby given, that the Bridge House Estate Committee will meet at Guildhall, London, on FRIDAY, the 22nd APRIL next, to receive TENDERS for TAKING DOWN and REMOVING the present BRIDGE at Blackfriars, and ERECTING a NEW BRIDGE in lieu thereof. The plans of the intended new bridge and specifications of the works to be executed, may be seen, and further particulars obtained, on application at the Office of the Engineer, JOSEPH CUBITT, Esq. No. 37, Great George-street, Westminster, on and after MONDAY, the 21st MARCH instant. The Tenders must be sealed up, addressed to the Bridge House Estate Committee, endorsed "Tender for New Bridge at Blackfriars," and left at the Comptroller's Office, Guildhall, London, before TWO o'clock on FRIDAY, the 22nd APRIL next, and the parties tendering desired to be in attendance at Guildhall on that day, at ONE o'clock precisely. The Committee do not bind themselves to accept the lowest or any Tender that may be sent in.
Guildhall, March 5, 1864. FERDINAND BRAND, Comptroller.

TO BUILDERS and OTHERS.—TENDERS are invited for the REPAIRS of the STEEPLE of the Parish Church of Godalming, Surrey. Particulars can be obtained on application to the Churchwardens.—Dated 6th April, 1864.
JOHN SIMMONDS,
ROBERT W. SHOTTER, } Churchwardens.

[For remainder of Contracts see next Page.

CONTRACTS.

TO BUILDERS.—Persons willing to CONTRACT for the ELECTION of a CORN EXCHANGE, at Ilfracombe, may see the Plans and Specifications at the Office of Mr. Hayman, Architect, Ilfracombe, on and after Monday, the 18th instant. Tenders to be sent in, on or before THURSDAY, the 21st of APRIL. The lowest or any Tender will not necessarily be accepted.

ROLT ROBINSON, Architect.

Huntingdon, April 12th, 1864.

TO BUILDERS. — Persons desirous of TENDERING for a new OAK ROOF, and other Works, to be done at Keeper's Chalk, may see the Plans and Specifications at the Architect's, from TENTH to FIFTEENTH days, and must tender by the 20th of APRIL, as will not be time to answer after. The lowest or any other Tender will not necessarily be accepted.

Bedford, April 1st, 1864. JAMES HORSFORD, Architect

TO BUILDERS.—Builders willing to TENDER for ANY or ALL of the undermentioned WORKS in the neighbourhood of Aylesbury are requested to call upon Mr. Arthur Bryant, GENERAL EDMUND STREET, Aylesbury, near Tring Junction, WORKS—NEW CHURCH at WITHINGTON; NEW CHURCH at WATER STRATTON; RESTORATION of the CHURCH at HIGH ERCAL; REPAIRS and ENLARGEMENT of RECTORY at UPTON MAGNA.

TO BUILDERS and BUILDING SPECULATORS.—The Trustees of the Rugby Charity are prepared to receive TENDERS from Builders and others for the EXECUTION of certain WORKS in FORMING the ROADWAY of a NEW STREET, or Communication between Old and New Millman-streets, and also for Taking, on Repairing Lease, certain Houses; and also on Building Lease, a Plot of Ground adjoining thereto. The Trustees do not bind themselves to accept the lowest or any Tender. Plans and specifications may be seen, and particulars furnished, on and after FRIDAY, the 15th APRIL instant, but information will be given at any time previously at the Offices of Messrs. LITTLE, RUSSELL, & ILIFFE, 2, Bedford-row, Holborn.

WEST HAMPNETT UNION, SUSSEX.

The Guardians of this Union having decided on a GENERAL REVISED VALUATION of the Rateable Hereditaments in the Union, for the purpose of the Parochial Assessment Act, 1862, TENDERS for the PERFORMANCE of the above Work are required, subject to the following Regulations:—1. 2. No Valuer will be eligible to act for more than one of the above districts, but Parties desirous to be appointed to the Appointment of Valuer of the district in which they are interested are requested to send in their names to the undersigned on or before JUNE 1st, 1864.

R. E. RAPER, Clerk to the Guardians.

Clerk to the Assessment Committee.

From whom all information can be obtained.

TO BUILDERS.—Persons desirous of TENDERING for the execution of Works required in ERECTING a HOUSE at Duppas Hill, Croydon, for H. Webb, Esq., can see the Plans and Specifications at the Office of Mr. J. BELCHER, 5, Adelaide-place, London-bridge, on and after WEDNESDAY next, between the hours of TEN and FIVE o'clock. Tenders to be sent in to the Office, on or before WEDNESDAY, the 2nd MAY next, endorsed, "Tender for a House at Duppas Hill." The lowest or any Tender will not necessarily be accepted.—JOHN BERNEY, Architect and Surveyor, Croydon.

TO BUILDERS.—TENDERS are required for the ERECTION of extensive STABLING, COACH-HOUSES and DAIRY BUILDINGS, and COTTAGE LODGE, &c., in connection therewith, at Marton Hall, near Malton, for H. W. Barker, Esq., according to plans, specification, &c., which can be seen on application at Marton Hall; or at the Office of Mr. ROSS, Architect, Darlington, from WEDNESDAY, APRIL 27th, until TUESDAY MAY 3rd. Tenders to be delivered at Marton Hall before TEN o'clock a.m. on WEDNESDAY, MAY 4th, 1864.

BRICKLAYERS desirous of CONTRACTING for the BRICKWORK (labour only) of several first-class HOUSES, may apply to Messrs WELCHMAN & GALE, at their Office, 76, Princes-terrace, Pimlico.

TO BUILDERS.—TENDERS are required for the ERECTION of a CHURCH in the village of Clack, Wiltshire, seven miles from Trowbridge. The plans and specifications may be seen, and printed forms of tender obtained, at the Office of Priddy, Clack, from MONDAY, the 18th inst. until SATURDAY, the 23rd inst., when tenders to be sent to me, before MONDAY, the 2nd of MAY. No guarantee is given to accept the lowest or any other tender.

CHAS. F. HANSOM, Architect.

Bath House, Bath, April 12, 1864.

TO BUILDERS.—Persons desirous of TENDERING for the ERECTION of WORKS required in erecting an Tavern at Lower Sydenham, for Messrs. SALDER & COLLYER, can see the plans and specification at my Office on and after WEDNESDAY next. Tenders to be sent to me before TWELVE o'clock, on MONDAY, the 2nd of MAY next, endorsed "Tender for a Tavern at Sydenham." The lowest or any Tender will not necessarily be accepted. JOHN BERNEY, Architect and Surveyor, Croydon.

16th April, 1864.

FARNHAM, Surrey.—Builders desirous of TENDERING for the ERECTION of FARM BUILDINGS at Dippenhall, for Mrs. C. Payne, can see the plans and specification on and after this day (Saturday) at the Public-house there, at the Office of the Architect, Mr. T. WONNACOTT, West-street, Farnham, on and after the 21st instant. Sealed Tenders to be sent in not later than Wednesday.

BUILDERS willing to TENDER for doing sundry WORKS at Kingsbury-green Farm, near Cricklewood, Middlesex can inspect the specification at the Farm or at the Architect's Office. The Architect reserves the right of rejecting the lowest or any Tender. Tenders are to be sent in on FRIDAY, APRIL 22, at FOUR o'clock.

HENRY McCALLA, C.E. Architect.

Office, 25, Westbourne-place, Eaton square.

TO HORTICULTURAL BUILDERS and OTHERS willing to TENDER for BUILDING a CONSERVATORY, &c. A., for Fernhurst, Essex, can inspect the drawings and specification at the Office of the Architect. The lowest or any Tender will not necessarily be accepted.

HENRY McCALLA, C.E. Architect.

Office, 25, Westbourne-place, Eaton-square, S.W.

TO BUILDERS. — Persons willing to TENDER for the BUILDING of new SHOP-FRONTS, &c., can see the drawings and specifications at MR. H. TURNER'S, Crown Patent and Wire Blind, Manufacturer, Paddington, W., any day before SIX p.m. Tenders to be delivered (under cover) as above, on or before the 20th instant, and the lowest will not necessarily, but will probably, be accepted.

NEW CHAPEL, HIGH-STREET, HODDESDON.—To BUILDERS.—Persons desirous of TENDERING for the whole or any portion of the WORKS required in the erection and completion of the above Chapel for the Methodist New Connection, may inspect the drawings and specifications, and obtain lists of quantities at my Office, 71, Albion-street, Leeds, from MONDAY, the 2nd, to THURSDAY, the 5th of MAY; and at the Chapel, High-street, Hoddesdon, from FRIDAY, the 6th, to MONDAY, the 9th of MAY. Tenders to be sent in to me, not later than TWELVE o'clock on TUESDAY the 10th of MAY. The lowest or any Tender not necessarily accepted.—By order,

Leeds, April 7, 1864. WILLIAM HILL, Architect.

TO BUILDERS.—Persons desirous of TENDERING for the EXECUTION of WORKS required in the ADDITIONS and ALTERATIONS to the HOUSE at the SURREY TAVERN at Croydon, for Mr. J. B. Jayne, can see the plans and specification at my Offices on and after WEDNESDAY next. Tenders to be sent to me before TWELVE o'clock on TUESDAY, the 3rd MAY next, endorsed "Additions to the Horseshoe Tavern." The lowest or any Tender will not necessarily be accepted.

JOHN BERNEY, Architect and Surveyor, Croydon.

16th April, 1864.

MANUDEN CHURCH, ESSEX. Builders are invited to TENDER for the ENLARGEMENTS and RESTORATION of the PARISH CHURCH of Manuden, near Bishop's Stortford, on receipt of the drawings and specifications at the residence of Mr. W. BUSH, Manuden, and at the Office of the Architect, where bills of quantities and all information can be obtained, on and after the 18th instant. Tenders to be forwarded on or before the 30th instant, to me. No pledge is given to accept the lowest or any Tender. By order,

THOMAS S. LANSDOWN, Architect, Malmesbury

LONDON, BRIGHTON, and SOUTH-COAST RAILWAY.—South London Extension to London Bridge. CONTRACT No. 2.

TO CONTRACTORS.—TENDER for ARCHING. The Directors of the London, Brighton, and South Coast Railway Company are ready to receive Tenders for the execution of the Works in erect ng a Viaduct, extending from Blue Anchor-road to Crimscott-lane, in the parishes of St. Mary, Bermondsey, Islington, and John Horsleydown, and crossing the south-western side of the viaduct of the South-Eastern Railway. The drawings, schedules, and approximate quantities of the Works to be executed, may be seen at the Company's Offices of Mr. FRED. DALE BANISTER, the Company's Engineer, London-bridge Terminus, on MONDAY, the 18th instant; and Tenders, in the printed form only, must be addressed to the Secretary, and endorsed, "Tender for Arching," and delivered at his Office, on or before MONDAY, the 2nd MAY next. The Directors will not be bound to accept the lowest or any Tender.

FREDK. SLIGHT, Secretary

London-bridge Terminus.

TO CONTRACTORS and BRICKMAKERS.—WANTED to be MADE, in a Brickfield near Romford (already opened and provided with Sheds and other conveniences), 1,000,000 BRICKS, 1,000,000 two-inch DRAIN-PIPES, and other Tiles. The Contractor to provide Machinery.—Apply to Messrs WESTERN & SONS, 7, Great James-street, Bedford-row.

PARISH of HORNSEY.—To CONTRACTORS for ROAD MATERIALS, MASONS, &c.—The Board for the Repair of the Highways will, at their Meeting, on MONDAY, 25th APRIL, be prepared to receive TENDERS for the SUPPLY of BALLAST, RAG, &c., to be delivered in such quantities and at such time as may be required by the Assistant Surveyor; also for Paving, Kerbing, and Mason's work as may be required. Forms of Tender and any information that may be given in application, by letter, addressed to Coxall's Road, Hornsey-road, Holloway, and marked, Surveyor's Office, Hornsey. Tenders to be sent in by NINE and ELEVEN. No Tender will be received after TWELVE o'clock on MONDAY, the 25th inst; nor do the Board bind themselves to accept the lowest or any Tender.

11th April, 1864. WILLIAM POTTER, Clerk to the Board.

TO BUILDERS and CONTRACTORS.

Persons desirous of tendering for the ERECTION of FIVE first-class HOUSES at Redcliff Road, Earl's Court, may see the drawings and specification at the Office of Mr. J. BELCHER, 5, Adelaide-place, E.C., any day between the hours of TEN and FIVE o'clock. Tenders to be sent in on SATURDAY, the 23rd instant, at TWELVE o'clock. The lowest Tender will not necessarily be accepted, but it will be necessary for the Builder whose Tender is approved to give such references and to provide proper sureties for the due performance of the works.

THE BOARD of WORKS for the PLUMSTEAD DISTRICT.—To SEWER CONTRACTORS, BUILDERS, and OTHERS.—Those persons desirous of submitting TENDERS for LAYING DOWN and CONSTRUCTING about 600 lineal yards of HALF-BRICK SEWERS, in the several roads in the district behind Shooter's-hill, Lee, within the said District, are requested to deliver the same at or before FIVE o'clock upon the afternoon of THURSDAY, the 5th day of MAY next, at the Office of Mr. F. W. PAWLEY, in Lee-road, Lee, Surrey, at which Plans and Specification of such works may be seen and all further particulars may be obtained. The lowest or any other Tender will not necessarily be accepted.—By order,

CHARLES AUGUSTUS SMITH, Clerk to the Board.

Crooms-hill, Greenwich, 14th April, 1864.

SOUTHPORT HOTEL COMPANY (Limited).—Parties desirous of CONTRACTING for the WORKS necessary for the ERECTION of the HOTEL, may obtain the plans and specifications at the Office of Mr. A. DARBYSHIRE, Architect, 44, Princes-street, Manchester, upon the payment of Two Guineas, which sum will be returned to the competitors not engaged upon the carrying out of the works. The drawings will be ready for inspection on and after the 21st of MARCH. Sealed Tenders to be addressed to the Directors of the SALE, Esq., Secretary, Messrs. SALE, WORTHINGTON, SHIPMAN, & REDDISH, Solicitors, Booth-street, Manchester, on or before APRIL the 21st.—The lowest or any Tender will not necessarily be accepted.

TO CONTRACTORS.—Messrs. TOD & M'GREGOR are prepared to receive TENDERS for the CONSTRUCTION of the WORKS necessary for the FOUNDATIONS, QUAYS, & C., for a HYDRAULIC SLIP DOCK, to be erected at their Dockyard, at Meadowside, in the Clyde. The plans and specification may be seen, and copies of bill of quantities and orders to visit the ground obtained, at the Offices of Messrs. BELL & MILLER, Civil Engineers, 4, Bothwell-street, Glasgow, on and after MONDAY, the 11th inst. Tenders, sealed, and endorsed "Tender for Slip Dock," to be sent in not later than MONDAY, APRIL 25.

NEW VICARAGE HOUSE.—Persons willing to CONTRACT for the ERECTION of the NEW VICARAGE HOUSE of LLANBADARN-FAWR, near Aberystwyth, may see the plans and specifications at the Black Lion Inn, Llanbadarn-Fawr. Tenders to be sent in to the Rev. JOHN PUGH, Vicar, on the 30th of APRIL.

W. BUTTERFIELD, R.I.A., Architect.

ABERYSTWYTH NATIONAL SCHOOLS.—To BUILDERS.—Persons willing to CONTRACT for the ERECTION of the NATIONAL SCHOOLS at Aberystwyth, for 400 children, may see the plans and specifications on application to the Rev. E. OWEN PHILLIPS, Vicarage, Aberystwyth. Tenders to be sent in, on or before SATURDAY, the 23rd of APRIL, addressed to the Vicar. The Trustees do not pledge themselves to accept the lowest or any other Tender.

R. KYRKE PENSON, Architect.

March 30, 1864.

ABERYSTWYTH WELSH CHURCH.—TO BUILDERS.—Persons willing to CONTRACT for the ERECTION of the NEW CHURCH at Aberystwyth may see the plans and specifications at the Office of HUGH HUGHES, Esq. (Messrs. Clerk) North Parade, Aberystwyth. Tenders to be sent in on or before SATURDAY, the 23rd of APRIL, addressed to the Rev. E. OWEN PHILLIPS, Vicarage, Aberystwyth. Tenders to be sent in, on or before SATURDAY, the 23rd of APRIL, addressed to the Vicar. The Trustees do not pledge themselves to accept the lowest or any other Tender.

R KYRKE PENSON, Architect.

March 30, 1864. WM. BUTTERFIELD, R.I.A. Architect.

BOROUGH of BRIGHTON. — To CONTRACTORS and OTHERS.—Notice is hereby given, that the Town Council will receive TENDERS from any such person or persons as may be willing to enter into a CONTRACT for the PERFORMANCE of the necessary Works for WIDENING the KING'S ROAD and JUNCTION-ROAD, from Ship-street to the western entrance of the Chain Pier, in the said borough, agreeably to drawings, more fully set forth in the conditions, which may be viewed and an offer MONDAY, the 18th day of APRIL instant, at the Office of the Borough Surveyor, Town-hall, Brighton. Sealed Tenders, addressed to the Works' Committee, and endorsed "Tender for Widening King's-road," and delivered by nine o'clock in the Town-hall, in the said Borough, before FOUR o'clock on TUESDAY, the 26th day of APRIL 1864. The Council do not bind themselves to accept the lowest or any Tender.

DAVID BLACK, Town Clerk.

Town-hall, Brighton, April 6th, 1864.

THE FURNISHING OF BED-ROOMS.

HEAL & SON have observed for some time that it would be advantageous to their Customers to see a much larger selection of Bed-room Furniture than is usually displayed, and that a large property of the sale and retail of the different descriptions of Furniture, it is necessary that each description should be placed in separate rooms. They have therefore erected large and additional Show-rooms, by which they are enabled not only to extend their Show of Iron, Brass, and Wood Bedsteads, and Bed room Furniture, beyond what they believe has ever been attempted, but also to provide several small rooms for the purpose of keeping complete sets of Bed room Furniture in the different styles

Japanned Bed Goods may be seen in complete suites of five or six different colours, some of them light and ornamental, and others of a plainer description. Suites of Stained Deal Gothic Furniture, Polished Deal, Oak, and Walnut, are also set apart in separate rooms, so that customers are able to see the effect as it would appear in their own rooms. A suite of very superior Solid Oak Furniture will generally be kept in stock, and from time to time new and select Furniture in various woods will be added.

Bed Furnitures are fitted to the Bedsteads in large numbers, so that a complete assortment may be seen, and the effect of any particular pattern ascertained as it would appear on the Bedstead.

A very large Stock of Bedding (HEAL & SON'S original make) is placed on the BEDSTEADS.

The Stock of Mahogany Goods for the better Bed rooms, and Japanned Goods for plainer and servants' use, is very great, increased. The entire Stock is arranged in eight rooms, six galleries (each 120 feet long), and two large ground floors, the whole forming as complete an assortment of Bed-room Furniture as they think can possibly be desired.

Every attention is paid to the manufacture of the Cabinet-work, and they have just erected large Workshops on the premises for this purpose, that the manufacture may be under their immediate care.

Their Bedding trade receives their constant and personal attention, every article being made on the premises.

They particularly call attention to their Patent Spring Mattress, the Somnifère Elastique Portatif. It is portable, durable, and elastic, and lower in price than the old Spring Mattress

HEAL & SONS' ILLUSTRATED CATALOGUE of Bedsteads, Bedding and Bed room Furniture sent free by Post.—196, 197, 198, Tottenham court road, London.

CONTRACTORS' RAILS. — WANTED, about FIFTEEN TONS, from 30 lb. to 36 lb. to the yard, in good condition. Reply, by letter only, stating where the rails are lying — Address, B. F. Mr. Wm. Marchants, 304, Regent-street, Oxford street, W.

HENDERSON'S PATENT DERRICK CRANE.—Prize Medals for Practical Utility and Moderate Cost.

HENDERSON'S PATENT DERRICK CRANE, so extensively used in the building of the Exhibition, London, can always be had from the Makers, from 10 to 15 Tons, upwards, Portable Engines, Forge, Winch, Quarry, Warehouse, and other descriptions of Cranes; also Steam Winches and Cranes for the Derrick principle). Water Companies and others can also be supplied with our Improved Sluice Valves.—For further particulars apply to HENDERSON & CAMERON, Makers Springfield Iron Works, M'Neil-street, Glasgow.

ST. PANCRAS IRON WORK COMPANY,

OLD SAINT PANCRAS ROAD, LONDON, N.W.

APPROVAL OF THE ROYAL VETERINARY COLLEGE.

THE MEDALS OF ENGLAND AND FRANCE,

And the Medals and High Recommendation of the Royal Agricultural Societies of England and Ireland.

SECURED BY EIGHT SEPARATE PATENTS. LATEST, 1863.

PATENT WROUGHT-IRON STABLE FITTINGS

SHOULD BE ADOPTED FOR THE FOLLOWING REASONS, viz.:—

That the BREAKAGES in Cast-Iron Fittings are numerous, and that one fracture from a kick or other cause, may occasion an injury to a Horse, and involve a loss equal to the entire expense of fitting up the Stable. The fear of this has led to the use of wood, and, in the case of Cast-Iron GUTTERS, to the adoption of another and less effective mode of draining.

PATENT ENAMELLED TOP PLATE MANGER, with RACK & WATER-TROUGH,

The whole of which, except the Rack, being enamelled, can be kept as clean as a DINNER PLATE.

THE HALTER BALL, ATTACHED BY A NEW IMPROVEMENT, WORKS NOISELESSLY, AND ALMOST WITHOUT FRICTION.

PATENT FASTENINGS FOR THE DOORS OF LOOSE BOXES.

These Catches and Hangings work easily, are self-acting, and cannot be put out of order: by their use all projections by which horses are often blemished are rendered impossible,—advantages peculiarly their own.

THE PATENT HARNESS FITTINGS

Keep the Harness and Saddles in shape, and are constructed so as to admit the air getting to the underside of them when hung up, thereby insuring a quick and perfect airing from any wet or moisture.

EVERY DESCRIPTION OF STABLE FURNITURE.

ILLUSTRATED LISTS ON APPLICATION.——INSPECTION OF SHOW-ROOM REQUESTED.

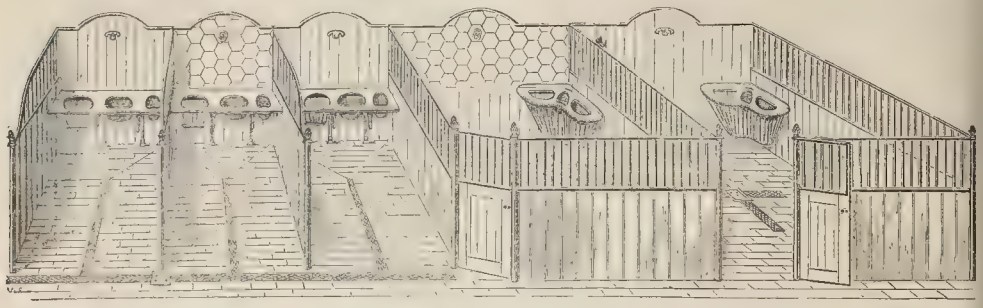
AWARDED TO

COTTAM & COMPANY,

No. 2, WINSLEY-STREET, LONDON, W.

FOR PROGRESSIVE AND GENERAL IMPROVEMENTS IN



STABLE FITTINGS AND HARNESS BRACKETS.

PATENTEES AND ORIGINAL INVENTORS OF

THE IMPROVED SYSTEM OF STABLE AND HARNESS FITTINGS,

PATRONISED BY THE ENGLISH AND FRENCH GOVERNMENTS, AS WELL AS BY THE PRINCIPAL NOBILITY, GENTRY, AND HUNTING ESTABLISHMENTS IN THE KINGDOM.

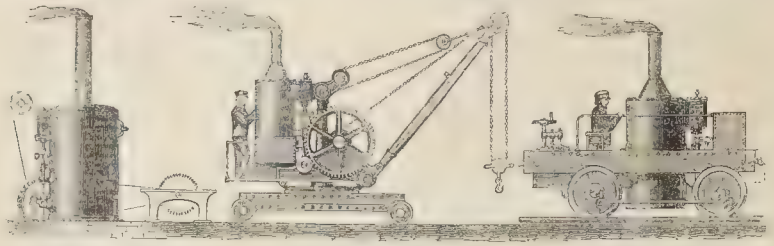
SECURITY FROM ACCIDENT by the use of the Patent Halter Guide and Improved Curved Top-plate; PROMOTION of HEALTH, COMFORT, and CONDITION, by the cleanliness and power of resisting infection of the Mangers and Troughs; and also of the Patent Drop Cover, to curtail the quantity of water to be imbibed. ECONOMY in the USE of FOOD, from the improved formation of the Fittings, and by means of the Patent Portable Seed-box, are some of the peculiar recommendations of Cottam's Patent Componised, Enamelled, and Galvanized Iron Fittings for Stalls and Loose Boxes.

COTTAM'S PATENT COMBINED SADDLE and HARNESS BRACKETS; IMPROVED SURFACE GUTTER, WITH MOVEABLE SAFETY COVERS; Sanitary Traps, Cheap and Durable Corn-bins, and every Article requisite for the Stable and Harness-room.

IRON GATES, FENCING, and HURDLES MADE by MACHINERY.

COTTAM'S newly-invented REGISTERED NOISELESS MANGER SHACKLE and GUIDE FOR HALTER-STRAP, and IMPROVED VENTILATING HARNESS BRACKETS, are only to be obtained from the Inventors, and can be seen in use at their Manufactory.

COTTAM & CO. exhibit for inspection, at their Iron Works, 2, Winsley-street, W., an extensive range of full-sized Stalls, Loose Boxes, and Harness Rooms, the most complete that can be imagined.



ILLUSTRATED CATALOGUES and LITHOGRAPHS free, on application to COTTAM and CO. 2, WINSLEY STREET, Oxford-street, London, W.

COTTAM & CO.'S only address in London, is 2, WINSLEY STREET, W.

N.B. WINSLEY STREET IS THE STREET OPPOSITE THE PANTHEON.

CHAPLIN'S PATENT PORTABLE STEAM ENGINES AND BOILERS.

PRIZE MEDAL, INTERNATIONAL EXHIBITION, 1862.

Stationary Engine. From 1 to 30 Horse Power.

Portable Steam Crane. 1 to 30 Tons.

Contractors' Locomotive. 6 to 27 Horse Power.

From the strength, simplicity, and compactness of these Engines, they are now extensively used for general purposes; also in situations where Steam Engines of the ordinary construction cannot be applied.

Stationary Engines, —require no building in, nor chimney stalk, and with our Patent forced combustion apparatus, will burn inferior qualities of coal, wood, or peats. These Engines are specially suited for shipment, and may be packed inside the Boiler to economise freight.

Portable Steam Cranes,—for wharf or railway, with wrought-iron carriages on wheels, link motion, foot brake, &c., all under the easy control of one man; the larger sizes hoist, lower, and turn round in either direction by steam.—*These Cranes were selected by H.M. Commissioners for receiving and sending away the heavy machinery at the International Exhibition of* 1862.

Contractors' Locomotives,—are adapted to work on rails or tramways of a gauge from two feet upwards; they are complete and efficient Locomotives, simple in construction, and the working parts easily got at for repair; they draw heavy loads at reduced speeds. These Engines are usually sent in one package, ready for work on arrival.

LIGHT PORTABLE, HOISTING, WINDING, AND PUMPING ENGINES, &c.

ALEXANDER CHAPLIN & CO. CRANSTONHILL ENGINE WORKS, GLASGOW.

OFFICE, 9, Adam Street, Adelphi, W.C.; LONDON DEPOT and WHARF, Lower Fore Street, Lambeth, S.

Engines of each class KEPT IN STOCK for SALE or HIRE, and all our Manufactures GUARANTEED as to EFFICIENCY, MATERIAL, and WORKMANSHIP.

Parties are cautioned against using or purchasing Imitations or Infringements of these Patent Manufactures.

LAMBERT, BROTHERS,

WALSALL, THE ALBION TUBE & FITTING WORKS, STAFFORDSHIRE.

LONDON: THOMAS LAMBERT & SON, LAMBETH.

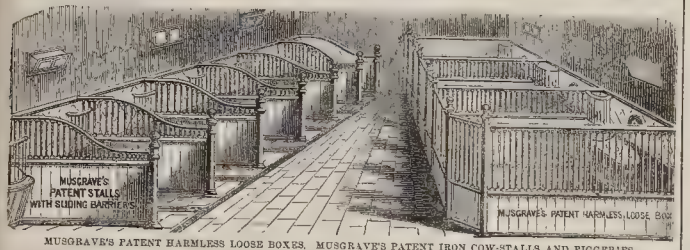
CAUTION to ARCHITECTS and BUILDERS.—In consequence of complaints arising from the substitution of INFERIOR and SPURIOUS ARTICLES instead of SMITH'S PATENT DOUBLE-ACTION DOOR SPRINGS; SMITH'S PATENT WEATHER-TIGHT WATER BAR; and SMITH'S PATENT WEATHER-TIGHT CASEMENT FASTENING for FRENCH WINDOWS:

The above are most respectfully requested to observe that all GENUINE ARTICLES are stamped with the NAME and ADDRESS, SMITH, Patentee, 69, Princes-street, Leicester-square, London; and SUCH ONLY are WARRANTED.

DRAUGHTLESS VENTILATION INFALLIBLY SECURED BY

BOYLE'S PATENT DOUBLE LEVEL WINDOW VENTILATORS.

COMYN, CHING, & CO.
(LATE HUXLEY & CHING),
23, LITTLE ST. ANDREW STREET,
UPPER ST. MARTIN'S LANE,
LONDON.



Draughtless, Dustless, Inexpensive, and universally applicable.

PRICE-LIST and FULL PARTICULARS FURNISHED on Application.

EXHIBITION PRIZE MEDAL, 1862, AND MEDAL OF ROYAL AGRICULTURAL SOCIETIES OF ENGLAND AND IRELAND

MUSGRAVE'S PATENT STABLE AND HARNESS FITTINGS.

MUSGRAVE'S PATENT HARMLESS LOOSE BOXES. MUSGRAVE'S PATENT IRON COW-STALLS AND PIGGERIES.

Architects who have not seen these Fittings are requested to write for Engravings, as they are unlike those of any other maker, and were admitted to excel all the work of their class in the Exhibition. They can be seen in first-class stables in almost every county in England and MUSGRAVE, BROTHERS, are now fitting several very large establishments under their direction in London. Architects, noted for adoption only what is the best of its kind. Particulars of these, as well as of MUSGRAVE'S PATENT SLOW-COMBUSTION STOVE, will be forwarded on application to

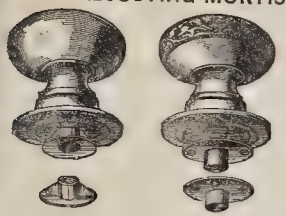
MUSGRAVE, BROTHERS, ANN STREET IRON WORKS, BELFAST.

BY HER MAJESTY'S ROYAL LETTERS PATENT.

WILSON'S DOUBLE-ACTION SCREW SPANNER,

MANUFACTURED BY

JAMES HEELEY & SONS,



Mount-street, Birmingham.

The superiority of this Spanner consists in its novel and rapid mode of adjustment by a double action screw, and its new and convenient arrangement of curved handle and shank, which, combined with its superior strength and excellent workmanship, renders it by far the best and handiest tool of the class hitherto produced. It is being extensively used by Engineers, Manufacturers, Machinists, and Railway and Steamboat Companies, and can be had of all respectable Ironmongers.

SIMPLICITY, UTILITY, ECONOMY, AND DURABILITY.

THOMAS PUGH & CO.'S NEW PATENT ECONOMIC SELF-ADJUSTING MORTISE AND RIM LOCK FURNITURE.

J. B. SCAMMELL & CO. (late Thomas Pugh & Co.)
WHOLESALE IRONMONGERS,
13, KING STREET, SNOW HILL, LONDON.

We invite particular attention to the PATENT LOCK FURNITURE, which we do not hesitate to say is the most perfect article now manufactured, great improvements having been recently made in it. It has been extensively used in Public and Private Buildings, in Her Majesty's Pavilion and Cabinet at Aldershott—alone, many hundred sets without one single failure. It is applicable to all Locks and Latches, both Rim and Mortise, and effects a most secure fastening, without any screw in the neck of the Knob. Perfect action guaranteed in both Locks and Furniture, if the Locks are of our own manufacture.

New rich Designs in Glass, China, Brass, Bronzed, Gilt, Carved Woods, Inlaid, &c. &c. or to any Design.

THIS FURNITURE MAY BE HAD WITH PLATES OR NUTS.

A most complete and extensive stock of every description of Locks, Latches, Brass Foundry, and Ironmongery, required for Buildings, of the best quality manufactured, at the lowest wholesale prices.

*** Illustrations and Particulars sent on application.

WAREHOUSES FOR NAILS, PIPES, GUTTERS, &c. IN ST. JOHN'S COURT.

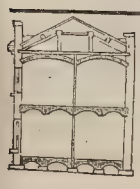
NOTICE TO ARCHITECTS AND THE TRADE.

WEST-END BRANCH, EGYPTIAN HALL, PICCADILLY.

J. DEFRIES & SONS,

GAS ENGINEERS AND MANUFACTURERS OF

CRYSTAL, BRONZED, AND ORMOLU CHANDELIERS, IMPROVED CRYSTAL STAR AND SUN LIGHTS,



For Lighting and Ventilating Public and Private Buildings.

J. D & SONS beg most respectfully to inform Architects and the Trade, that having been solicited to open a West end Branch, they have taken the DUDLEY GALLERY, EGYPTIAN HALL, PICCADILLY, and at an enormous outlay they have made it replete with every description of lighting medium, including REGISTERED DESIGNS of MEDIÆVAL GAS FITTINGS, CRYSTAL, BRONZED, ORMOLU, and ELECTRO-PLATED Chandeliers, Brackets, Vestibule Lights, Bronzed and Gilt Statuettes

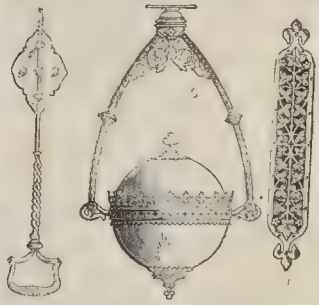
SPECIAL DESIGNS PREPARED in perfect ACCORDANCE WITH Architectural Arrangements. Estimates furnished FOR THE LIGHTING and Fitting up of Theatres, Music-halls, and Public or Private Buildings with Gas, &c.

The usual trade discount allowed, as at their

MANUFACTORY and CITY SHOW ROOMS, 147, HOUNDSDITCH, CITY.

THE DENNETT ARCH.

Allowed to be the cheapest fireproof construction known, and used with the greatest success for the last ten years in the Midland Counties, and has been adopted by G. G. Scott, esq. for the New Foreign Offices, used in any form of arch, groin or dome; turned to any length, width, or height, forming a perfect floor and ceiling in one mass, from 2½ inches in the crown to any required thickness.



Address to the Patentees,—A. & R. DENNETT & CO. NOTTINGHAM.

TESTIMONIAL.—"I have made use of Messrs. Dennett & Co.'s material for Fireproof Arching, and though I have, happily, had no practical experience of its efficiency as against fire, I can bear witness to its strength, and its extreme convenience of application. I have made use of it in positions in which I should have found it difficult to introduce any other fireproof material, and it has this advantage, that the arches constructed of it are so entirely in one mass that they cover the space like a compact shell or inverted basin, and are, consequently, almost wholly free from lateral pressure.

"GEO. GILBERT SCOTT, 21, Spring Gardens London."

THE TIVIDALE COMPANY, LIMITED

(Late JOHN H. PORTER & CO. of the Ebro Works, Tividale, and late of Birmingham),

Are prepared to undertake the MANUFACTURE and CONSTRUCTION of

ALL KINDS OF WROUGHT AND CAST IRON WORK.

The class of work contracted for and manufactured by the late Firm has consisted chiefly of Iron Bridges (among others the Lambeth Suspension Bridge in London),

Iron Roofs, Sheds, Stores, and Lighthouses; Iron Columns, Girders, and Fire-proof Floors;

Smiths', Founders', and Boiler-makers' Work generally.

The Works at Tividale, near Dudley, are situate in the heart of the Iron and Coal District of South Staffordshire, and thus conveniently placed for delivery to the several shipping ports—London, Liverpool, Hull, Gloucester, and Bristol.

The Messrs. PORTER continue their personal superintendence, as Managing Directors, in London and at Tividale; and it is hoped that the Company will enjoy a continuance of those favours hitherto so liberally extended to the late Firm.

Chief Office—7, St. Mildred's Court, Poultry, London, E.C.

MANTEL PIECES, ENGLISH AND FOREIGN,

IN EVERY VARIETY OF DESIGN AND COST,

Have been added to their LARGE and EXCELLENT ASSORTMENT of FINE FINISHED STOVES FENDERS, &c. in the NEW SHOW ROOMS of the

TO BUILDERS, JOINERS, CONTRACTORS, &c.

THE "GENERAL JOINER."

SAMUEL WORSSAM & CO. having long felt the importance of introducing a LABOUR-SAVING MACHINE, which by combining several operations at a moderate cost, should meet the requirements of builders and others engaged in the conversion of timber, beg to offer for this purpose their "General Joiner," as above, which in its present greatly improved form will, with 2 horse power, do the work of at least fifteen skilled joiners, in SAWING, CROSS-CUTTING, and SQUARING, PLANING and THICKNESSING, MORTISING, TENONING, GROOVING, TONGUEING, RABBETTING, BORING, BEADING, MOULDING, CHAMFERING, &c. &c. For price illustrated circulars, apply to S. WORSSAM & CO. Saw-Mill Engineers, King's-road, Chelsea (sole manufacturers), where the "General Joiner," and samples of the work may be seen.

POWIS, JAMES, & CO.

SAW MILL ENGINEERS,

A liberal discount to the trade.

FIRE-PROOF CONSTRUCTION.—FOX & BARRETT'S PATENT.
This improved system of fire proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.
The system combines ECONOMY with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.
The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete, so constructed that each floor becomes in effect a beam of artificial stone with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring boards, or of cement, asphalte, tiles, slate, or other material.
Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as affording the great desideratum of fire-proof construction, even for ordinary dwelling houses and domestic buildings, within the reach of every one.
Further information may be obtained of the Proprietor of the Patent,
MR. BARRETT,
12, YORK BUILDINGS, ADELPHI

TO IRONMONGERS, BUILDERS, &c.
PATENT WROUGHT-IRON WELDED TUBE for GAS; Galvanized ditto, for Water; High-pressure Cocks, &c. Manufacturers of Dr. Arnott's Improved Ventilators.

REGISTER AND ELLIPTIC STOVES,
RAILING BARS, GATES, AND PANELS,
SASH WEIGHTS, &c.
ANDREW McLAREN & CO.
are the cheapest Ironfounders and the best makers of these and General Castings, and keep a large Stock at
LONDON WAREHOUSE,
174, UPPER THAMES STREET,
LONDON.

STAINED GLASS for WINDOW DECORATION, GLASS MOSAIC and PAINTED OPAQUE GLASS for WALL DECORATION
J. T. LYON & CO. (late Moberly & Lyon),
13, BERNERS STREET, OXFORD STREET, W
Price lists, drawings, and estimates sent on application. Work executed on the most moderate terms compatible with excellence of design, material, and workmanship.

SOHO PLATE and GENERAL GLASS WAREHOUSE, 26, Soho-square, W. and George-yard, Crown-street, Soho, W.C.
ALFRED GOSLETT begs to inform Architects, Builders, and the Trade generally, that every description of Glass required for building purposes can be procured WHOLESALE, either in STOCK SIZES or CUT TO ORDER, at his extensive warehouses as above.
SPECIAL ESTIMATES for the supply of LARGE QUANTITIES of Glass upon the receipt of particulars.

PURE SILVER LOOKING-GLASSES
manufactured by NEW PROCESS.—Unequalled in brilliancy. Not liable to injury from damp, frost, or breathing. EMBOSSED, ORNAMENTAL and BENT GLASS, SILVERED, at MODERATE RATES.
PATENT SILVERING COMPANY (LIMITED),
7, LOWER KENNINGTON LANE, S.

STAINED GLASS, MOSAIC, WATER GLASS, and other CHURCH MURAL DECORATIONS.
MR. PREEDY,
13, York place, Baker street, Portman square, London, W.

STAINED GLASS and WALL PAINTING.
MESSRS. CLAYTON & BELL,
311, REGENT STREET, W.
Adjoining the Polytechnic Institution.

PAINTED DECORATION and STAINED GLASS.
CHARLES BLACKMORE,
372, FUSION ROAD, LONDON, N.W.
Designs and Estimates submitted.

LEAD GLAZING for CHURCHES and other BUILDINGS, Plate Quarries, Geometrical Patterns, or Fret Work. Builders and the Trade are supplied with every description of Lead Lights and Window Lead, on the shortest notice and lowest terms, by E. NEWMAN, Plain and Ornamental Lead Glazier to the Trade, 8, Bath street, City-road, E.C. Extra strong Lead for Churches, &c. Estimates forwarded on receipt of particulars.

WINDOW GLASS! WINDOW GLASS!
Builders, Plumbers, Painters, and the Trade supplied with every description of WINDOW GLASS at wholesale prices. Crown and sheet Glass, Coloured and Ornamental Rough, Rolled, and Patent Plate. Sashes Glazed for the Trade. Special Prices given for Contracts and large quantities. Plate Glass Warehouse, at
GRIST'S CITY GLASS WAREHOUSE,
No. 47, Chiswell-street, opposite Whitbread's Brewery, E.C.

THE PATENT CRYSTAL WINDOW
BARS, adapted for domestic windows, shop fronts, conservatories, skylights, verandahs, exhibition and counter cases, aquariums, fern cases, &c. &c. combining perfect transmission of light, durability, absolute rust or decay, and economy in the facility with which they are kept clean. A guarinum with slate or marble bottoms of various sizes, with or without fountains, also of glass. Manufactured by LLOYD & SUMMERFIELD, Park Glass-Works, Birmingham. All kinds of flint glass, cut and plain, coloured window sheet, optical sheet, coloured lenses, &c. &c.

PAINTED GLASS WINDOWS and MURAL DECORATION,
LAVERS & BARRAUD,
ENDELL STREET, BLOOMSBURY, LONDON, and
43, JOHN DALTON STREET, MANCHESTER.

GLASS.—W. H. JACKSON supplies BRITISH PLATE, PATENT PLATE, ROLLED PLATE, CROWN, SHEET, HORTICULTURAL, ORNAMENTAL, COLOURED, PHOTOGRAPHIC, and every description of Glass, of the best manufacture, at the lowest terms.
Lists of prices and estimates forwarded, on application at the Warehouse, 315, Oxford-street, W.

CRYSTAL WHITE SHEET GLASS.—
WHOLESALE BRITISH and FOREIGN WINDOW GLASS WAREHOUSE.
British and Patent Plate, Crown, Sheet, Horticultural, Stained, Coloured, Ornamental, Ground, Fluted, Rough Plate, Photographic, and every description of Glass.
Estimates and Price-lists forwarded free on receipt of business card addressed to
R. METTAM & CO.
30 and 31, PRINCES STREET, SOHO, LONDON, W.

VENTILATION—PURE AIR.

for the admission of Pure Air.

THROUGH THE EXTERNAL WALL.
These Ventilators are arranged so that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 187 and 189 (late 117 and 118), Union-street, Borough, London.

BUNNETT & CO.'S PATENT REVOLVING IRON SHUTTERS.

REVOLVING SAFETY SHUTTERS IN ONE SHEET OF STEEL.

CLARK'S PATENT,
FOR
SHOP FRONTS,
2s. 2s. 6d. 3s. and 3s. 6d.
Per Foot Super.
THE MOST SIMPLE AND SECURE SHUTTER EXTANT.
Branch Establishments :—
4, MARKET STREET, MANCHESTER;
GLASGOW,
6, BUCHANAN STREET;
DUBLIN,
7, LOWER GARDENER ST.

CLARK'S PATENT,
FOR
PRIVATE HOUSES,
2s. 6d. and 3s. 6d.
Per Foot Super.
BURGLAR AND FIRE PROOF.
Branch Establishments :—
PARIS,
42, RUE NOTRE DAME DES VICTOIRES;
BRUSSELS,
RUE DE L'ECUYER;
AMSTERDAM,
BINNEN AMSTEL;
SYDNEY,
51, HUNTER STREET.

HEAD OFFICE, CATE STREET, LINCOLN'S INN FIELDS, LONDON.
WORKS, GEORGE YARD, QUEEN STREET.

SNOXELL & CO.'S
PATENT REVOLVING SHUTTERS, IN IRON OR WOOD,

From 2s. per foot super. (without machinery). Reference to fourteen years' use without repair or trouble.
BRASS SASH BARS, STALL-BOARD PLATES, BLINDS, LIFTS FOR BANKS, HOTELS, &c.
96, REGENT STREET, W. Manufactory—35, OLD STREET, E.C.

IMPROVED REVOLVING SHUTTERS.
FRANCIS & CO.

Having made great Improvements in the manufacture of Wood or Iron Revolving Shutters, are enabled to supply the public at the following reduced prices :—
Wood Revolving Shutters, with all requisite Gearing complete, from 2s. per foot. Iron Revolving Shutters, with all requisite Gearing, complete from 3s. per foot, suitable for Banking Houses, Public Buildings, Offices, Shop Fronts, and Private Houses.
Brass Drawn Sash Bars and Brass Stall Plates at a great Reduction in Price.
Illustrated Prospectuses and Testimonials free by post on application at 174, GRAY'S INN ROAD, HOLBORN, LONDON.

BATH STONE OF BEST QUALITY.

RANDELL & SAUNDERS, Quarrymen and Stone Merchants, Bath.

List of Prices at the Quarries and Depôts, also Cost for Transit to any part of the United Kingdom, furnished on application to BATH STONE OFFICE, CORSHAM, WILTS.

BATH STONE OF THE BEST QUALITY.

PICTOR & SONS, Quarry Proprietors and Stone Merchants, Bath.

Lists of Prices at the Quarries and Depôts, also Cost of Transit to all parts of the Kingdom, forwarded on application to BATH FREESTONE WORKS, BOX, NEAR CHIPPENHAM, WILTS.

STATUARY AND OTHER MARBLE CHIMNEYPIECES.

ARCHITECTS, BUILDERS, and MASONS will find at

W. WILLETT'S SHOW-ROOMS, MARYLEBONE ROAD, N.W.

OPPOSITE THE YORKSHIRE STINGO,

A LARGE ASSORTMENT of STATUARY & COLOURED MARBLES, also ENAMELLED SLATE, and STONE CHIMNEYPIECES, at Prices to command their Orders.

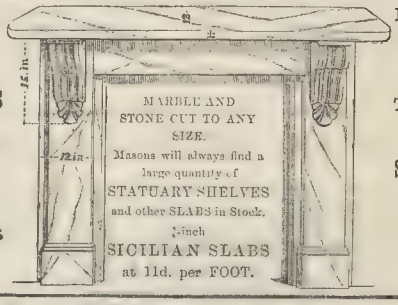
CARVED TRUSS STATUARY MARBLE CHIMNEYPIECE, FROM £6. AND UPWARDS.

ESTIMATES WILL MEET WITH PROMPT ATTENTION.

ARCHITECTS, BUILDERS, MERCHANTS, SHIPPERS, AND MASONS

Will find that the CHEAPEST HOUSE in LONDON for the following Goods is at the

EMPORIUM, J. W. BIRD & CO.'s, 143½ and 145, EUSTON ROAD, N.W.



BOX STONE CHIMNEY PIECES
for 5s. 6d.
Truss ditto ditto, 11s. 9d.

MONUMENTS AND TABLETS
in great variety, equally low in price.

MASONS' WORK OF ALL KINDS
CONTRACTED FOR,
AND EXECUTED WITH DESPATCH IN TOWN OR COUNTRY.

A STOCK OF
500 CHIMNEY PIECES
always to choose from.

PRICE LIST ON APPLICATION.

MARBLE BOX CHIMNEY PIECE
for £1 5s.
First-class Bed-room ditto, £1 10s.

FIRST-CLASS
TRUSS MARBLE CHIMNEY PIECES
from £2 5s. to £3 5s.

A WELL-CARVED
STATUARY CHIMNEY PIECE,
with 13½-inch Piers,
suitable for a Drawing-room, which must be seen to be believed,
FOR THE SUM OF £6.
Not Prompt Cash.

PRICE LIST ON APPLICATION.

IMPORTANT TO ARCHITECTS, ENGINEERS, BUILDERS, RAILWAY, AND OTHER COMPANIES.

VIEILLE MONTAGNE ROOFING ZINC.

Company's General Agency, 12, Manchester Buildings, Westminster.

Zinc properly laid has been proved by most extensive and long experience in France, Belgium, and Germany to be a most secure, durable, and economical covering, and is now preferred to all other materials for roofs. Its extreme lightness makes it most valuable for covering buildings requiring large spans with comparatively light framing. On a rough calculation it may be estimated that not less than 41,000,000 square feet is the average quantity of Roofing surface now annually covered in the above countries alone. Within the last few years persevering efforts have been made to introduce into England proper workmanship, in accordance with the principles which are observed on the Continent, and which alone can secure the sound and perfect construction of a Zinc roof. To aid in extending as much as possible the knowledge of these simple rules, models showing all the details are to be seen in the Architectural Exhibition in Conduit-street, and the following, selected out of a very great number of recently constructed roofs, are referred to as examples:—The Patent Granary, West-India Docks; Copenhagen Works, Limehouse; a private house in Holland Park; Homes for Poor Merchants' Clerks, Muswell-hill; a large Warehouse, 77, Thames-street; Ship roof, Sheerness Dockyard; the Victoria Station, Pimlico; the Stations in the Metropolitan Railway; the Stations of the Madras Railway Company (400,000 feet); the Warehouse of Messrs. Oakes, Brothers, & Co. Madras (20,000 feet); the Refreshment Rooms at the Exhibition; the Verandah of the Horticultural Society's Conservatory; Gloucester Railway Station; Messrs. Horniman & Co.'s Tea Warehouse, Wormwood-street; Messrs. Hoare & Co.'s Brewery, Smithfield; Cape Town and Wellington Railway (60,000 feet); Fifty new Dwelling Houses at Palace Gardens-terrace, Kensington; Twenty ditto, Inverness-terrace, Bayswater.

Plans, Estimates, and all useful information will be furnished, without charge, by applying to either of the Directing Architects.

JAMES EDMESTON, 5, Crown-court, Old Broad-street.
R. G. FISHER, 12, Manchester-buildings, Westminster.

N.B. No covering can be more economical, durable, and secure than Zinc when well laid, but good Zinc badly laid will spoil the roof, and, with a view still further to encourage good work, a special Discount will be allowed to all persons upon the Zinc used in roofs, when certified by either of the above Architects to be properly laid.

THE LAND SECURITIES COMPANY

(Limited).
Capital, 2,000,000*l.*
In 100,000 Shares.

His Grace the Duke of Marlborough, President.

The Directors of the International Financial Society (Limited), acting as a Finance Committee.

John Ennis, esq. M.P.
Sir James Ferguson, Bart. M.P.
Col. Fulke Southwell Greville, M.P.
Sir John Charles Dalrymple Hay, Bart. M.P.
James Mackie, esq., M.P.
Sir Lawrence Palk, Bart. M.P.
Sir Henry Stracey, Bart. M.P.
William Dargan, esq.
Henry Fitzroy Howard, esq.
Sir John Gray.
Henry Ker Seymer, esq.
John Hewett Lloyd, esq.
Hon. William Napier.
Hon. Henry Petre.
Sir Charles Tuch, Bart.
Plant, Twells, esq.

OFFICES.—Chief Office, West End, 32, Charing-cross, S.W.; Branch Office, East End (54, Old Broad-street, E.C.), Office of International Financial Society.

The Company will make advances, repayable with interest, at fixed terms, or by instalments, or by terminable annuities, upon the security—

1st. Of landed estates, first class house property, and real property of all descriptions and tenures, and of all estates and interest therein.

2nd. Of rates, dues, assessments, and impositions of all descriptions, raised or imposed by or under the authority of any Act of Parliament, public or private; Royal Charter, Commissions of Sewers, Drainage, or other sufficient legal authority.

3rd. Of charges and securities of all descriptions upon or affecting landed estates, and all real property and tenures, made, given, or issued, under the authority of any Act of Parliament, public or private.

Terminable advances will be made on landed estates, and on houses in course of erection, with or without the deposit of title-deeds; and they undertake the negotiation of special investments.

For further information, and forms of application, apply to the Hon. WILLIAM NAPIER, Managing Director, the Land Securities Company (Limited), 32, Charing-cross, London, S.W.

MARBLE! MARBLE!! MARBLE!!!

TO ARCHITECTS, SURVEYORS, BUILDERS, HOUSE DECORATORS, and OTHERS.

A. TAGNON,

PROPRIETOR OF MARBLE QUARRIES AND MANUFACTORY IN BELGIUM. WHOLESALE, RETAIL AND EXPORT.

MARBLE CHIMNEY-PIECES, VASES, PEDESTALS, MARBLE CASES FOR CLOCK-STANDS, &c. &c.

SHOW-ROOMS, 137, GRAY'S INN ROAD, LONDON, W.C.

MEDIÆVAL PAPERHANGINGS,

from the Thirteenth to the Sixteenth Centuries. Designed by C. T. ROBINSON, F.R.I.B.A. Manufactured by

W. M. WOOLLAMS & CO. 110, HIGH STREET, near Manchester-square, London, W. May be obtained of the principal Decorators.

Extracts from notices in the undermentioned publications:—

"Conventional red patterns, often displaying great beauty of form, character are the examples sent to us. With a few exceptions, the colouring of the specimens is commendable, in many it is worthy of the highest praise."—*Athenæum*.

"The designs are exceedingly elegant, and the colours good and well arranged. They have, also, the great recommendation of being free from a senile. Some of the patterns are of strictly ecclesiastical character, suitable for mission churches and oratories, or they may be used as wainscoting in church decoration."—*Church Builder*.

"The majority of the patterns are exceedingly satisfactory, and not expensive."—*Builder*.

"These designs are infinitely varied, yet always consistent and effective; the colouring is pre-eminently good, both in the selection of tints and in harmonious combinations, and the quality of the paper is of the highest order. We recommend them, as they commend themselves, to purchasers of all classes, and for every purpose for which wall paper may be applied."—*Art Journal*.

GUTTA-PERCHA MILL-BANDS.—The

Gutta-Percha Company beg to state that the increasing demand for the Gutta-Percha Strapping for Driving-bands, Lathestraps, &c. fully justifies the strong recommendations they have everywhere received. Their durability and strength, permanent contractability and uniformity of substance; their non-susceptibility of injury from contact with oils, grease, solds, alkalies, or water; and the facility with which the only joint required can be made in bands of from 2cd to 3 feet long, render them superior to leather for almost all working purposes, and decidedly the most economical. Every variety of Gutta-Percha Articles, such as Tubing, Soles, Pump buckets, Fire-buckets, Boxes, Union joints, Flasks, Bottles, Bowls, Toilet trays, Curtain-rings, Galvanic Batteries, Telbetype Trays, &c. &c. manufactured by the Gutta Percha Company, and sold by their Wholesale Dealers in town and country

THE GUTTA PERCHA COMPANY, PATENTEES,
18, WHARF ROAD, CITY ROAD, LONDON.

PARQUETS SOLIDAIRES.—HOWARD

& SONS, 26 and 27, Berners-street, are prepared to supply Machine-made Patented Solid PARQUET FLOORS 50 per cent. cheaper than they have been yet offered. Illustrated Catalogues, plans, and estimates free.

The Builder.

VOL. XXII.—No. 1106.

*The Metallurgy of Iron and Steel.**

EMPIRICISM of empiricisms, all here is empiricism," would probably be the exclamation of a metallurgical Solomon, at the end of an excursion through the iron-working districts of England,—or, indeed, of any other country. As Schiller says:—

"Dass ihr den sichersten Pfad gewahlt, wer mochte das laugnen?
Aber ihr tappet nur blind auf dem gebahnten Pfad."

Practice, however, has always been in advance of theory; empiricism is always the pioneer of science; and pretty much the same as we eat, drink, and sleep without understanding how we do these things, so do we make iron and employ it in our buildings, without thoroughly understanding the laws of the heat by which we have produced a molecular structure just as little understood. Apart and distinct from the progress in practical metallurgy to be expected from the ever-widening and ever-deepening flow of physical research, carefully collated narratives of the many and varied metallurgical processes continuously carried on by the most civilized as well as only semi-civilized communities, ought to afford us that tuition, those lessons, and that extension of knowledge, which are only to be acquired by comparison. Dr. Percy has already rendered good service in this way, and his work, published some two years and a half ago, "On Fuel—Fire-clays, &c.—Copper, Zinc, and Brass," attracted much attention from men of science of all classes. Metallurgy is indeed a science, or, rather, a scientific art, of the greatest interest, and it probably appeals to the attention of a greater number of classes than any other branch of the arts. The physicist and chemist can look upon our great iron, copper, and similar works as so many gigantic laboratories; while the engineer draws from thence some of his most important materials of construction, upon the quality and right usage of which depend his own good name and fortune, and, of much greater importance, the lives and fortunes of hundreds. The bulky octavo volume now before us, measuring some three inches in thickness, is on iron alone, in its various shapes, and it need scarcely be said that the subject is not merely one that is now attracting the concentrated and trained attention of the man of science, but is also exciting the wide-spread but necessarily superficial regards of the popular mind. Dr. Percy begins by giving a chapter of some ten pages to the physical properties of iron,—its purity, its crystalline system, its tenacity, and its varied relations to heat. More fully are the chemical properties of iron dilated upon, and its relations to the different gaseous elements, and the various metalloids. We then have chapters on the alloys of iron with the metals and metalloids; on the various iron ores, and the methods for assaying them; on the direct extraction of iron in the malleable state from the ore; on the indirect extraction of iron in the state of cast iron from the ore,—which last subject, of course, forms about one fourth in bulk of the book. Puddling, working of the ball, working of the puddled bar into merchant or finished iron, sheet iron, and slit rods, are the principal subdivisions of the subject of the production of malleable iron from the cast iron of the blast furnace. That compound of iron we call steel, has of course a good portion of the book to itself, and the different ways by which steel is produced, either by the addition of carbon to malleable iron, or by the partial decarbonization of cast iron, or by fusion of pig iron with malleable iron, are very fully treated upon. The casting and manipulation of steel, a chapter on the strength of iron and steel, and a highly interesting sketch of the history of iron, form the concluding portion of the book, and an appendix contains several valuable metallurgical papers by other authors.

It need scarcely be said that a man with the abilities and opportunities of Dr. Percy could not fail to bring together a mass of extremely valuable and previously unpublished information. We have been looking forward to the issue of this work for a long time—more than a year. Dr. Percy's first volume appeared at the end of 1861, and he hoped to be able to publish a second volume, to complete the work, before the end of 1862. We find, however, that "on conferring with many persons engaged in the smelting of iron and in the manufacture of iron and steel, the author became speedily convinced that such a treatise as he had originally intended to prepare on these subjects would not be satisfactory; and he accordingly determined to proceed on a much more comprehensive plan than he had, in the first instance, contemplated." We are sorry to say that this portion of the work, even in its present enlarged shape, has very much disappointed us, and we venture to think that most engineers will look upon the work with the same feeling. We speak as users, not as makers, of iron and steel; for to examine minutely into the metallurgical qualifications of the book would take us too far out of our usual path.

In one word, Dr. Percy is lamentably deficient in the engineering qualifications, both mechanical and mathematical, requisite to handle certain portions of his subject. Iron is not made in order that books may be written about it; iron is made that engines, roofs, bridges, railways, guns, may be built of it. The metallurgist is the mere servant of the engineer. Accordingly, in a good work of this kind, we should expect as full a treatment as possible of the physical properties of iron,—of, for instance, the influence of annealing, of cold-rolling, of the loss of strength through welding, and similar important questions. We are promised an explanation of the phenomenon of "burnt" iron, but we have vainly sought for an answer to this question, which is stated, at one part of the book, to be reserved "for future consideration." Professor Walter Johnson's experiments on the thermo-tension of iron, conducted practically twenty years ago for the United States Government, are quite ignored by Dr. Percy, although he ought to have known that the principle has lately been employed in several instances. The following remark is something quite beyond us:—"So universal is the recognition of the high character of Lowmoor iron, for example, that when civil engineers specify that it shall be used in cases where security to life is the first consideration, they are absolved from responsibility in the event of the occurrence of accidents from breakage of machinery." Does this mean that a railway company, or its engineer, would be absolved from compensation suits arising out of an accident through the breakage of a Lowmoor tyre? The sentence either means this or nothing at all; but whether there is any truth in the remark must be well known to any mechanic. One of the most surprising things in this work is the author's ignorance of, or ignoring of, Mr. R. Mallet's important researches into the molecular structure, the metallurgic treatment, and other questions connected with iron in its various forms. Some weeks ago we gave an account of Mr. Mallet's theory of the molecular structure of wrought iron, and we may as well at once state that all we know of this gentleman can be acquired by any reader of his work on the "Physical Conditions involved in the Construction of Artillery," and his later paper "On the Co-efficients of Elasticity and of Rupture in Wrought Iron, in relation to the Volume of the Metallic Mass, its Metallurgic Treatment, and the usual Direction of its constituent Crystals," the last of which was read before the Institution of Civil Engineers in the 1858-59 session. Dr. Percy so often shows a manly frankness in speaking of questions about which a less bold man would probably hold his tongue, that we fully acquit him of wishing to ignore the works of a fellow labourer; and we have no doubt that, if he had known Mr. Mallet's elaborate experiments, and truly philosophical deductions therefrom, Dr. Percy would have either praised or blamed them. Mr. Mallet's paper on "Heavy Forgings" is a philosophical investigation into a most important subject, we believe almost unique of its kind; and Dr. Percy would have gained much light from it, and would probably have been enabled to enter much deeper into questions he is now obliged to pass over rather slightly. Mr. Mallet has put forward a most valuable theory of molecular constitution of crystalline bodies, and he has applied it to the molecular constitution of cast and wrought iron. He has investigated, with more or less success and with greater or less results, the effects of bulk and fluid pressure on iron casting, on the relation of elasticity to the crystalline axis of wrought iron, on the relations between annealing and tenacity, and similar questions quite ignored by Dr. Percy, although these investigations have been already put forward some eight years before the public.

At no place do Dr. Percy's deficiencies appear more marked than in his chapter on the strength of iron and of steel. In the first rank he gives us that fossilized (1844) table of Mr. Fairbairn, of the "results of experiments on hot and cold blast pig-iron, from the principal ironworks of the United Kingdom," &c. Now, this table has little more than an historical value at present, as some nineteen of the works alluded to have been given up, while three have been pulled down, and one of the works has been changed into a railway station. *Tempora mutantur.* About ten of the whole number of firms which are quoted as making cold blast-iron, are now using the hot blast. With respect to another table giving the results of a series of experiments by Mr. W. Fairbairn, "taken from the report of the British Association for the year 1853, on the effect of repeated meltings on the transverse strength and resistance to crushing of cast-iron," Dr. Percy very truly remarks that the coke in the cupola was, doubtless, not without some influence on the results of these repeated meltings. But what Mr. Mallet has said long ago with reference to these experiments of Mr. Fairbairn, may be repeated to the "metallurgist" who endorses the "repeated meltings" theory, with the single reservation as to a supposed chemical action:—"Some most important conditions, modifying if not invalidating such a conclusion, and more especially the effects of the variable *mass* of the casting, seem, however, wholly to have escaped him. Indeed, these experiments, rightly considered, only prove what was well known before—that by continually remelting and casting into *small* pieces (*i.e.*, imperfectly

* "Metallurgy: the Art of extracting Metals from their Ores, and adapting them to various Purposes of Manufacture." By John Percy, M.D., F.R.S., Lecturer of Metallurgy at the Royal School of Mines. Iron and Steel. London: John Murray. 1864.

steeling) any cast-iron, we may gradually cause all its suspended carbon (in the state of graphite), to exude, as Karsten long ago proved, and so gradually convert the metal into an imperfect steel, with increased hardness and cohesion, and diminished fusibility, but with properties altogether unworkable and useless. No such result can occur when the metal is cast into large masses, nor any such assumed improvement by repeated meltings, but very much the contrary." Dr. Percy then copies, or rather abridges, five tables out of Mr. Kirkaldy's valuable work on the tensile strength of iron and steel. He very carefully gives the contraction of area at fracture of the specimen, and he thus seems to think with Mr. Kirkaldy, that this fractured area is a measure of the breaking strength of the iron—an assumption shown to be mistaken several years ago, although at the same time this measure is, no doubt, good for rough purposes. Then Dr. Percy copies another table of Mr. Fairbairn's,—that on the tensile strength of boiler-plate at various temperatures. He does not allude to the fact that Dr. Fairbairn has not given the extension of the plates, an omission which makes his experiments next to worthless for any useful purpose. In truth, Dr. Percy has excised the same detail from Mr. Kirkaldy's tables; thus showing that the learned doctor has little or no sound notion as to what really constitutes the value of iron for any use whatsoever, from the ring in a pig's snout to the girder of a bridge. We regret to have to speak in this way of what is, in its *narrative* parts, a very valuable book, and a book that will do much good. But *on ne peut pas faire une omelette sans casser des œufs.*

ARCHITECTURE IN FRANCE.*

MEDIÆVAL TO RENAISSANCE.

South a little farther, but more to the east, and out of the direct reach of mediæval traffic, is the magnificent church of Bourges. This is chiefly of later date than the twelfth century, but there still stand, little the worse for their 700 years' wear, the two grand portals, north and south, and in them you have the stiff archaic sculpture of the time. Bourges is now in the very heart of France, but it was, at that time, an outlying post in a barren country, and one does not look for nor find much progress there. Southward again, in the direct track of trade, we come to Poictiers—southward still of that, to Angoulême; both too well known to need much notice here. Poictiers is northern in its domical vaulting, and southern in the want of clerestory and triforium. Angoulême has the northern chevet, the Angiovine aisleless plan, and the altogether southern domes. These domes are Byzantine altogether. And now, for my last examples, we reach Moissac, Tarascon, and Arles, all in the great southern province: no trace there of northern art; no fine lights and shadows from clerestory and triforium; no boldly soaring towers; no beautifully-planned apse. We miss all these down south, but we have, instead, the bold and graceful portals and the richly-sculptured cloisters—so lavish in their decorations, so elegant in their carvings, that one almost forgets the contrast between Arles and Laon, in the wonderful interest which the carvings to these small southern churches excites.

Now I want to lead you, before we come to the great works of the thirteenth century, to examine again the course of the art-changes up to the end of the twelfth. First, then, we find Normandy, as before, still, to a certain extent, isolated in art, not borrowing from or influencing other provinces, and still keeping its own peculiar style, be the origin of it what it may. But it and its arts seem to have influenced us. Secondly, then, at the time when we had only such archaic work as we see at Durham, Peterborough, and Norwich, there had been finished a large part of the great Pointed church of St. Denis.

But the Angers Pointed churches must have been earlier still; and earlier still than those were Avignon and other Pointed vaults still farther south. We must call to mind that most of the buildings, Christian and Saracenic—and grand ones they are wherein the Easterns had a hand, as Sicily, and Egypt, and Syria, were, long before, all Pointed in their arches. In Italy, even in the north, all was strictly still Romanesque and round-arched. But, though the true Gothic seems to have been begun in France, it was only in the north that the style had taken root. Little of it is to be found south of Paris, for the Pointed arch in the southern provinces was used with no Gothic feeling. It marks, however, the influence of commerce upon art, in that the nearest to it, perhaps, is to be found in Angers, the chief town northward in the general route. Now, up to this time, it seems to me that this advance in Gothic was altogether French; at least, I know of no other place from which the style could have been borrowed: from Germany it certainly was not. All that I have ever seen or heard of it was Romanesque—Romanesque of a very peculiar and beautiful style; very Eastern much of it, and containing some of the finest specimens of plan and outline that the world has ever seen; but no Gothic was there. It did not come from England. Few of our works here are even Transition, and we cannot call such buildings Gothic.

It did not come from Italy, for nothing there is to be found that is not Romanesque. To France, too, we must, I think, give the honour of designing the great sculptured portals, such as we find in this country at Arles and Tarascon (most carefully described by M. Waring at the Institute, in 1860), and the earliest of these are at Bourges and Strasburg. Somewhat near to them in date are those of S. M. Toscanella and Verona. But these are very different in arrangement from the French—combine less harmoniously with the general mass; and, although the French and Italians of those times may have interchanged ideas, it seems to me that the French architects of Southern France may fairly claim the merit of their design, and nothing that I know is more rich and graceful.

It is clear, however, that there was, as I have before suggested, an interchange of thought between the art-workers of France and Italy, because, in addition to the twelfth century being the age of porches in both countries, we find, also, in both, the strangely conventional introduction, under the columns, of lions and other animals. This lasted in Italy to the fifteenth century, one of the most magnificent specimens being the porch at Ancona. To sum up—the French works of the twelfth century, as a rule, were more powerful than graceful—more bold than studied—less marked as a distinct epoch by mouldings, or outlines, or plans, but free in all to an extent that no age, before or since, perhaps, has known.

The architect in Provence, Auvergne, and Anjou, was a singularly unfettered man. He took for his plan the cross form or the oblong, with or without aisles, as it but answered his purpose or his funds. He turned his lower arches in the round form which his fathers used, covered his great church with the northern groin or the southern barrel vault, and sometimes with both together, and formed these groins or vaults with the Pointed arch. Then, upon that, if he wished for a bolder form, he raised the dome, with its pendentives borrowed from the east, and finished the great work by the radiating chapels which led to the glorious French *chevet*. And then he lavished upon the entrance to this church all the efforts which sculpture could make, and which were the beginnings of that work which culminated in the portals of Rheims and Bourges. Where, too, shall we find such studies in aftertimes as those that we get in the cloisters of Arles or Moissac? Rude they are,—rough,—not to be looked at for studies of anatomy or graceful drapery (though you may find that too), or for all the delicate refinements of the sculptor's art. But what a study there is of the men who wrought them! What lessons in stone do they teach! Walk through those cloisters; and, as you look at each capital, the mind can find a separate subject to learn from or instruct. The Greek never did this, nor did the Roman. Not even did the men of a century later! Compare, for instance, the carving in the cloisters of St. Triphime with that of the later cloisters of the Augustines at Toulouse,—a wretched falling off. I don't say copy these rude works; but I do say, work as they worked, with our superior knowledge as a help to us, and we shall do well.

Now for the thirteenth century, the last that one can well study in France, for art ran to riot very quickly afterwards; and, though much of the after work is beautiful, almost to perfectness, yet there is so much waste, if I may use the term, in its beauty, that one can scarcely well go very deeply into it; at least I, for one, never could; and I shall, therefore, now confine myself almost to the thirteenth century, with a general glance only at the after work. The thirteenth century is the date of Philip Augustus and St. Louis—of Philip the Bold and Philip le Bel—of the conquest by the French of the English provinces, north and south—of Provence and Champagne—of the Crusade in Languedoc, and the destruction of the great order of the Templars. It reached from our John to our Edward I.—from Norwich cathedral to Salisbury, Wells, Lincoln, and Westminster—the nave of York and the Eleanor crosses.

In Germany, it gave us many of the Cologne churches, with part of the cathedral itself;—in Italy, the Baptistery at Parma, St. Francesco at Assisi, the Campo Santo and Baptistery at Pisa;—in Spain, the Alhambra. It is the great era which M. Viollet-le-Duc brings forward as the age of prodigious activity in art—when the grandest of the French works were undertaken with the most marvellous power of design and richness of detail; but done, he says, in a hurried way, so that both the construction and details were wanting in that perfect finish which characterized the earlier works: and it is the time at which the purest Pointed architecture is to be found in Europe. Of this era are the chief parts of the great French churches of Amiens, Bayeux, Rheims, Chartres, Le Mans, Strasburg, Tours, Poictiers, Limoges, Bordeaux, Toulouse, and Alby, the walls of Carcasonne, and many another work that gives life and interest to the city or the landscape. Here again, as before, we find a difference, strongly marked, between the north and the south; but the strength of the south had now died out, and all the energy of design had passed to the north. There is, indeed, much of great interest in the south: the great churches of a single plan, and of one aisle only—marvels of construction, and valuable for study for our Protestant service. So, too, there is much to be learned from the brick architecture of Toulouse and its neighbourhood—a style quite peculiar to it, and not much known. But, nevertheless, the great move in architecture and sculpture in the thirteenth century was in the north, and to their architects, I think, belongs the credit of the movement.

The change, however, in France, was scarcely so great as with us, from the style preceding; and it was, to a much greater degree than with us, a mere refinement on the century before. We find the mouldings, to a great extent, very similar in both—the foliage to the capitals very much the same; so, also, the general contour of the buildings, the sculptured porches, the lofty spires. All had been shadowed out before very much more than with us, and though they had got the start of us in the twelfth century, I think that we had overtaken and outstripped them in the thirteenth.

To begin, now, with the details, the most important point, although the most minute in any comparison of work and dates.

No one studying the subject can fail to see at once that the change of details made in France is very much less than with us. The mouldings most in use continued with them to be almost the same; and one finds the sections that were used at St. Denis, in the middle of the twelfth century used still at Chartres in the middle of the thirteenth, with very little change indeed. Yet that length of time is very similar to that between our St. Cross and Westminster—between the Norman section of the one and the elegant Pointed section of the other. So, too, with the foliage. From a very early period in the twelfth century to a later period in the thirteenth, much of the foliage of the capitals was very similar throughout; and though the later work was somewhat freer and less archaic than the earlier, yet the general form was still the same. Compare this, now, with the difference between the same buildings that I have before named, or with the heavy work of Peterborough transepts and the Chapter-house of Salisbury and York. This great adhesion to a settled type of work presents much greater difficulty to any student investigating the theory of dates in France than he meets with in Great Britain, and it is somewhat dangerous to speculate too closely upon French dates from such details. It is, indeed, captivating when we find, as we do when first we begin our studies in architecture, that

* By Mr. T. Hayter Lewis. See p. 256, *ante*.

mere contour of a moulding, or the turn of a f, will sometimes fix a building's date within ne twenty years; and one is sorely tempted theorise thereon somewhat too confidently in ling to our minds a doubtful date. But a ger study will often show that a little knowge here, as in many other things, is a danous thing—not to have, but to theorise upon t the actual facts of a given proved date, I often show how much we must assign influence to local types and peculiarities. nowledge makes us modest in this as in all ngs else.

In France, however, so far as I can see, study s taken a path quite different; for details ere seem to be studied by the French in quite secondary way. I do not know a single ench work which gives the detailed mould- gs to any workable size.

This, however, is a digression.

Compare such of the French mouldings as I ve given, and which are perfectly fair speci- ens, with any of our works of the same date, d the difference will be found very striking in vour of the advancement in England.

As to the capitals, the magnificent series of awings which Mr. Scott has been kind enough lend me, and to which I shall allude in con- sion, will show at a glance the various differ- ces of form and foliage.

But then there comes the tracery of the ndows, and I am afraid that the French had early the start of us there. I must, however, ubt whether they had much start of us in their ulpture. Wells cathedral was about equal in te to most of the great French churches; and e sculpture there will hold its own, I apprehend, ith any. Take, as an instance, its sculpture as mpared with Chartres. Comparisons are, wever, rendered somewhat difficult by the certainty of the dates themselves in many of e examples best known. Take, for instance, miens, better known and more written about, rhaps, than any other, from its nearness to r own land, and its reputed date, so temptingly ar to Salisbury. The latter was begun 1220, d finished some forty years after, on one plan. miens about the same; but the works there are id to have extended to 1272; and then again, ter a severe fire, to have been renewed in the teenth century. Now, there can be no doubt hatever that a total change of the aisle plans took ace after the main skeleton of Amiens was up, ecause the outline of the buttresses, clearly eant to be external, can still be seen *within* the apels—this plan adding, in fact, another aisle the whole building, and pushing outwards the hole of the lower walls. These latter, there- ore, with the whole of the lower windows, aisle, roining, &c., must have been added after the eneral skeleton of the cathedral was finished. think, too, that any one carefully examining the tails will say that the work externally, above e canopies of the great portals, is later, to a narked extent, than the figures below. Also, hat the whole of the capitals to the traceried indows throughout are very much later than he general skeleton of the building; so are the arapets. Much, too, inside is clearly of a later tate, so that, until the history of this great hurch is much more closely written from the tones themselves, than has, I think, been done, e must scarcely take it as a good foundation or a theory of date comparisons. We may, owever, do something more by comparing it with other French works. I did so with Tours and Chartres particularly, and found the piers, apitals, abaci, groining, and many other parts, o be almost identical with one or other of these wo cathedrals.

Now, the date of Chartres and of Tours is bout the same, viz., 1,250, and I do not think hat we should put the upper part of Amiens at all earlier—the tracery of the windows, the arapets, and the west front decidedly later. This middle of the thirteenth century, then, affords us a most excellent standing point of comparison between Amiens, Tours, and Chartres of hat date, Westminster and other English examples of the same time, Paris a few years earlier, and Laon of a few years earlier still. The result is curious, for if you take the mouldings and the general lightness of the style as evidence only, the earliest, Laon, would really seem more advanced than the other French examples. The capitals are freer at the later date, but scarcely so finely modelled I think, and most decidedly the ornamental work of Laon, in the exterior, exceeds by far the rest. The early French work, in fact, in general, shows such broad surfaces and is so little cut with mouldings, that I am constantly reminded of Mr. Burges's remark, that, we must choose between colour and mouldings, and cannot have both—the French preferring the colour. It is not, however, very easy to find genuine examples for the study of colouring in the interior of the old French churches. There are, indeed, very many and large traces of it in many places. I may mention St. Hilaire, at Poictiers, and the cathedral of Tours in particular. But, it requires very great care in discriminating as to what was done at the time, or nearly so, of the building, and what was added afterwards in Renaissance times (often *upon* the first), when decoration was used in France most lavishly. Then all was whitewashed over, and it is sometimes no easy work to say, until we come to some decided ornament, to what date we must assign the painting.

To resume as to the comparison of dates, we may, I think, be quite safe in concluding that the Pointed style in France was developed at an earlier period there than with us, but that, in our mouldings, and our foliage, it advanced with us to a greater degree of delicacy, refinement, and beauty of details, than ever it did in France. I know of nothing in France that will equal in grace and delicate beauty the Early English foliage capitals, or the beauty of the spandrels and other ornaments that we see at Lincoln or Westminster, or the Chapter-houses of Salisbury and of York, for instance. The French are, no doubt, gloriously vigorous, as Mr. Scott's fine drawings here show. Their piers and mouldings, too, are bold enough, but they always seem to me to have scarcely the richness that one would expect to find in them. I mean, of course, up to and including the thirteenth century, for there was no lack of richness after,—it then ran quite to riot in its details. I should not care to trouble you much with this, even were there time; for, beautiful as much of the detail is, and picturesque as much of its effects, there seems throughout to be so much in it of the artificial, that its study is soon abandoned. Much of the very late work, quite of the Renaissance, is very picturesque in outline, and the skylines of the roof afford, very often, quite wonderful studies. I give a few examples, enlarged from my sketches.

Before quite concluding, I should like to make a few general remarks on the French works:—1st, with respect to the general outline, there is no one, I suppose, who does not know the wonderfully elegant flying buttresses of Chartres, for instance, which tell so well in a section. Beautiful they are in drawing, and fine as constructive works. But the real effect, more especially at the apsidal ends, is by no means so good. In many cases (I noticed it particularly at Chartres itself, and at Le Mans), the buttresses are so close together, and reach so nearly to the parapets or eaves, as quite to exclude the windows and the wall-lines from most points of view. There is at Le Mans a good opportunity of comparing the effects of these heavily buttressed apsidal ends with the simpler form of an earlier date; for the lady-chapel there is shown projecting its simple apsidal outline in direct contrast with the flying buttressed end of the church; and, certainly, I could not hesitate to say that the earlier simple form was the most pleasing. Then the excessive height of the French cathedrals seems to require such depth in the buttresses as, in many cases, to obscure the side walls, as I have above described they do the apse.

Then, again, the triforium is treated, generally, in a very different way to ours. We have, as a rule, in our early work, a deep practicable gallery, lighted from the back, low in height compared with the aisles and the clerestory, and giving thus a scale to the whole of great value. The darkness, too, offers a fine contrast to the lightness of the clerestory over.

In France, as a rule, the triforium is a mere gallery in the thickness of the walls, and is glazed throughout. Great lightness is, of course, the result, but one misses much the deep shadow of our own cathedrals. This great lightness, too, has another defect, viz., that the great solid piers of the nave and choir seem too heavy for their work. This is particularly the case, I noticed, at Bourges, and the effect is increased by the want of massiveness as well as richness, in the effect of the great aisle arch mouldings. On the other side, however, the French have many advantages over our plans. No one can, I think, contrast our square-ended churches, as compared with the French apse and chevet, without feeling the superiority of the French plan.

In a few instances, as at Strasbourg and St. Hilaire, Poictiers, the Italian arrangement of the apsidal end, raised above the Saints' Confessional, is to be found. But, in general, the French plan is strictly a congregational one, the aisle being continued round the apse as a regular path. Then, externally, we have in French works, the great crowning cornices—a feature of very great importance, and that gives a remarkably bold finish to the walls. This is found, too, in the domestic work as well as ecclesiastical, and in work of all dates. It deserves attentive study, both for detail and for general effect; and seems to supply the only want (and to my mind a very great want) which we find in the great Gothic palaces of Venice, viz., that of a great crowning cornice. Finally, we have the domical vaulting—a beautiful variety of groining in itself for one compartment seen separately, but very difficult to manage well when seen in a long succession of bays.

I must say a few words now as to the French glass. Many of the cathedrals are filled with it to an extent which we really cannot understand, when we think of the many vicissitudes that France has undergone, and one sees, especially, the actual treatment of whole ranges of great, untraceried windows of the twelfth and thirteenth centuries, as decorated with glass of the finest character.

Usually it is divided off, as in our own Early glass, into geometrical medallion patterns, with deep rich borders—the medallions filled with figure subjects, and the spandrels, &c., with a peculiar sort of plain diaper, almost invariably of blue and red.

Wherever the medallions and diapers are of much the same tone of colour, the general effect is that of a somewhat confused mass, owing to the smallness of the details. In such a case, the large single-figure lights of the later glass contrast favourably with the earlier. But when (as is usually the case) the latter have the medallions brought distinctly out by their contrast with the deeply-coloured diaper ground, the window so marked out produces all the picturesque effect of a traceried window, with the power of colour superadded. The borders are very beautiful in design, but the diaper which I have already alluded to takes very badly the place of our scroll-work. Sometimes, as at Strasburg, the glass is so thick with age, that the obscurity is too great. But, in general, the effect of the cathedrals lighted by ranges of such glorious windows as one often sees in France is a thing never to be forgotten, and affords means of comparing the general effect of glass of various dates which one can scarcely find elsewhere. Of one thing I must warn the young student, in prosecuting his studies in France. He will find that many churches, ancient or restored, have the vaults and masonry strongly lined with deep white or red lines. In very many cases this is really old, in the vaults especially; for there, the spaces between the ribs, being filled with chalk or light stone in irregular lumps, were plastered over with a thin plaster and lined. I think that this was done as a means of decoration, and a legitimate one. It certainly has a very good effect in general.

But the French architects of the present day often make a point of plastering over the masonry, wherever irregular, of the walls, with similar plastering, so closely resembling stone as to be very deceptive, and then lining it over in regular courses, quite irrespective of the actual joints of the masonry. I saw a ludicrous example of this at Saumur, for the piers had been jointed at different heights at the sides, and were often at a wide distance apart at the angles. Used properly, the showing the actual lines of the stones has an excellent effect, better, in fact, than one could expect. There is a striking proof of it in part of the Early arcade at Le Mans, where three of the arches only have been thus lined, the rest retaining their old coat of whitewash. The difference is wonderful.

I now come to the fine series of capitals lent to me by Mr. Scott. In his lecture at the Royal Academy, he brought forward very prominently their general characteristics, as being chiefly derived from Byzantium. You are quite aware that the French foliated capitals are very different from ours. We seldom see in France such beautiful and elegant work as we do here; but then the French is, as a rule, bolder; and I know of nothing in other countries quite like them in general design. They are, as Mr. Scott describes them, Corinthianesque, but not mere bad imitations of Corinthian. One seldom sees, for instance, the caulicoli at all. There is one instance from my sketch at Le Mans; and one finds them

in early examples, as at Caen, for instance; but very rarely indeed in thirteenth century work; and, although the general outline often suggests its Corinthian origin, yet these capitals, as a class, may fairly be ranked as genuine French work in design. Yet I quite agree with Mr. Scott's idea as to their Byzantine origin, and (after comparing notes with him) find that I do so from a different point of view altogether. Mr. Scott was struck with the general resemblance of the French capitals to the Byzantine rendering of Roman work, whereas I had invariably classed them as Byzantine owing to their peculiarity of sculpture.

There is a mannered style of manipulation found in nearly all the Byzantine work that I have seen which is rather difficult to describe, but is very evident in most examples. The lines are cut in very sharply and squarely; the eyes of the leaves and other points wanting emphasis are drilled in deeply, and the whole effect is that of a wish to give as much sharpness as possible, so as to bring out the work when seen at a distance. This gives a certain kind of stiffness to the work, but it is most so in the subordinate parts, the general curves and outlines being often as graceful as they are bold. Of course, these details of execution are not to be found throughout. The French school was evidently soon an independent one, preserving only in parts the traditionary style of work. But it is so clear that I feel no doubt whatever, looking at the matter from quite a different point of view to Mr. Scott, that Byzantine influenced French art, as I believe it did all other art, down to the thirteenth century at least. The French school soon then formed quite an independent style of its own, as you may see by the drawings of the Sainte Chapelle. I must, however, in fairness say, that there is a good deal of French work of by no means the high character that one usually sees, simply because one does not care to draw from bad examples. Much of the work, even at Chartres, for instance, is very coarse and poor.

I have alluded in this rapid sketch to ecclesiastical architecture only; for, to notice architecture in its domestic or military phases would have been too great a task for this short space. But I must remark that the same feeling for bold, horizontal, crowning lines, is shown even more in secular than in other works. You find the great crowning cornices used with a wonderfully good effect. Take, for instance, the Hôtel de Ville, at Bourges. It tells most capitally as a finish to the florid enrichments of the front, which would, in fact, be strangely overcharged without it. So, also, the door and window openings are often spanned by a bold, straight lintel, carried, perhaps, through the whole front, with no attempt whatever to disguise it in any way by an arch. It is simply a plain, straight piece of stone, clearly strong enough to do its work, and contrasting well with the arches of the other openings. This horizontality is a strong feature throughout French Gothic, and seems to pervade it even to the design of their most upright features, the pinnacles and spires.

To sum up. Whilst English Gothic has its own great beauties,—such as its delicate and graceful foliage, its splendid suits of mouldings, and its beautiful Decorated work, with all the elegance of the Flamboyant without its extravagance; and, whilst I hold that the beauty of such works of ours as Westminster and Lincoln, Salisbury and Wells, cannot be exceeded, it must be granted that the French has likewise beauties in its Early art that ours wants. The great rose windows, the bold capitals, the grandly-sculptured portals of the north, and the Romanesque work of the south, may all be claimed by France as her own. This is as it should be. Art varies with the climate and the race; and far be it from us to wish that it should be otherwise, or that such differences should not produce peculiar beauties in each land.

One word I must say as to the men to whom we owe them—the architects. These men of old are honoured still in France. The relic in all Rheims most noteworthy, perhaps, is the incised tomb of Libergius, the architect of its great church. That survives the stormy times that saw the monuments of St. Denis broken to powder, and as you walk up the wide new street which will soon afford a fitting entry to the cathedral, you will see that it is named after its architect. Can any one—can we above all—looking at such works as his, believe, for one moment,—the lowering theory constantly put by the clever author of the "Handbook of Architecture," (and my very good friend),—that they were not the products of genius and study, such as were sculpture and the painting, but merely advanced products of the technic art?—putting, in fact, the men who adorned the portals with their figures of stone, and decorated the shrines with colour, above him who designed the whole. To me it is a marvel that the gifted author I have mentioned could think, for a moment, seriously, that the designers of these glorious works which fill their beholders with wonder, and admiration, and awe, could be other than amongst the highest, in the fulness of their intellectual power.

And now, in bringing to a close this sketch, which must, from its nature, be somewhat bare, I cannot avoid saying a few words as to the country of which I have been speaking. I have travelled as much as most men, in most European countries, but in none have I found, as an utter stranger, a more kindly welcome than in France. A mischance may sometimes happen (and where in life may it not?), and sometimes one may meet with a surly neighbour, or ill-tempered host; and sometimes, possibly (though it has not fallen to my lot) one may meet with a lingering trace of the feeling that France and England are not quite friends.

But set out on your travels with a full intention of pleasing and being pleased—adapt yourselves to the customs of the land, and respect them when they differ from ours, and I know of no place, save our own land, where you will meet with more kindness, more thorough friendliness, than you will in gay, sunny France.

THE ARCHITECTURAL EXHIBITION.*

CONTINUING our inspection of the works in the galleries in Conduit-street, we find that Mr. G. Goldie exhibits two frames of "Sketches for Works in progress" (107 and 108). They include a "Design for a Monumental Cross," being a cross of very plain pattern, carried by a column; the Hospital Tribune, Great Ormond-street, which is a balcony overa doorway, similar in general form to a well-known example in the South Kensington Museum; a "Design for a Doorway to be erected in Irish Limestone;" a domestic chapel, with columns and ambulatory on the plan of an octagon; and other works. The same architect exhibits a drawing of the "Lady Chapel: Altar, Galashiels Church" (135). The crowning feature of the centre of the reredos belongs to that mimicry of castellated work which has come into favour, and would assuredly have been called "Carpenters' Gothic," or "cardboard Gothic," some few years ago. It may have been in use in the Middle Ages; but we doubt whether it is more consistent with "the True Principles of Pointed Architecture," than were some of those patterns of paper-hangings that Pugin held up to derision; and certainly we do not care to see it copied. The remainder of the altar-piece is in good taste. By Mr. Goldie also are "St. Mary's Orphanage, Norwood, Surrey; and St. Scholastica's Abbey, Teignmouth, Devon" (134), both Gothic, and (178), "Wood and Marble Altar and Reredos, Roscommon, Ireland; carved by A. Hayball, of Sheffield," of Italian character. The shafts, diapered and banded, of the dwarf-columns in the last-named of these works, are well treated; and the chapel is cleverly designed,—so far at least as the plan is part of the contribution to effect; whilst the sketches and drawings testify to the possession of a facility in drawing which should be subservient to, as well as foster, great power of design.

But, little as there is in this year's exhibition, there is enough to make us fear that the power alluded to, involving constantly the introduction of fresh elements of effect, is not with those who are most engaged in the execution of works, contributing much to the progress of our art. The new elements or details that we require, or even that we might deem consistent with a healthful condition of our art, are not necessarily many in number: but some such elements are at each moment essential; or, there is no art. We fear equally the eccentricities of those who are not practised in actual work of building, and any mere repetition of themselves by those who are practised. In Gothic, especially in those works wherein colour is introduced in brickwork, we apprehend that no advance is just now being exemplified. There appears to be the idea still prevailing, referred to in our articles of former years, that the simple introduction of the pointed arch, or only with *voussoirs* of red brick, is sufficient of itself, and whatever the form of such arch, or however the diminutive height of stories might suggest that the straight lintel would be best.

Mr. C. Gray, whose abilities have been displayed in former exhibitions, as in works in London and its suburbs, should be counselled to abandon the short arch-headed windows which he is fond of using. In his "First Design for Houses now erecting, Gore Road and Gloucester Road, South Kensington" (198), all the windows are of this character. The form of the head is objectionable on the score of lighting, and the proportion of the opening is both different to the best examples, and bad. The big cusps to the arches of one of the porches are no improvement to the arch. There is Gothic character in details of this design; but the arches are semicircular, springing from pilasters; and the balustrade to the cornice is formed of small columns. The building as finished has in it much to praise.

In the "Ateliers and other Buildings" erected for Mr. Emanuel (109) by Mr. J. Butler, there is little effect from other features than those, of brickwork and Gothic arches, that we have alluded to. Mr. Edmeston's works even, we think, would have been better without the Gothic arches used as they are in "Messrs. Davis's Premises, 158 and 159, Whitechapel Road" (211). The growing practice of arranging the stories over a shop-front with a large area of void, or window-opening, is founded on correct principles, so far as the omission of heavy piers between windows is concerned; and metal shafts or window-bars could be rightly used in the story over the brest-summer and the stories above. But we question whether the shafts should carry arches of brick-work, or masonry, at all. The idea, or *motif*, of the lintel, that is a beam borne by its ends, should be preserved throughout; the effect resulting from the use of the arches is opposed to the intention of the other arrangement; for, instead of the weight being relieved from the glass shop-front, the arches carry the weight down to it. Ths shafts strike attention as just sufficient for that; although, where there is great bulk to be supported, the eye has not yet become satisfied with any material in slender proportions in place of bulk of support. For filling-in and dividing the width of an opening spanned by a long lintel, metal-work is most valuable; but there should be a lintel or an arch spanning the total width, demonstratively strong enough to bear itself, or without aid from the brestsummer below. Numerous attempts are being made to produce decorative effect with a combination of brick or stone work and iron; but we do not find that the results yet have done much more than in manifesting the difficulty of such attempts, and showing that there is reason in the views we have ventured to put forth. The French, who are making much use of iron, in their street architecture, use it only for railings, and for light coverings (*perrons*) to the steps of entrances, or where in the former case the Italians might have had stone balusters, and where in the latter we might place a porch: rightly, or wrongly, the stone-work and the iron-work are as though they had been designed by different hands, and with no thought whether one might be intersected or hidden by the other. The material, iron, however, is obviously adapted to one of the positions named, weight being considered, and to the other where windows would have been darkened by a stone porch: whilst the ornamentation in the French iron-work is superior to any that we exhibit generally on the exteriors of London houses. In Mr. Edmeston's "Granary, erecting for the Patent Ventilating Company" at Canada Wharf, Rotherhithe (237), the zinc-work enclosed gallery at the top of the buildings, in the recesses between the square projections which are main features of the front, seems to us to call for observations similar to those just made. Without plan it is impossible to exactly understand the reasons for the peculiar arrangement of similar tower-formed projections which make up the front, and for the inserted gallery: but there is much merit in the design. In the same architect's "Parsonage, St. Faith's, Norfolk" (138), the stone corbels to the gable-caves are much too large for the thin lines that are the only termination to the gable; and the trefoils at the feet of the buttresses to the porch are misplaced.

Mr. T. C. Clarke's "Warehouses recently erected in St. Mary Axe" (140), involve a treatment of the shop-front, and are in some respects more, and in others less, successful than a work by him which we lately published, and which the present work resembles in the use of three

* See p. 255, *ante*.

ches to carry the cornice of the building, and springing from tall thin piers of the height of several stories. Here, the central bay has an eliptic arch, and the side spaces have semicircular arches. The effect would have been better had the crown of the central arch risen some few inches higher. But the piers, instead of standing over glass, are placed over corresponding piers, the central bay being the widest, as allowed by the plan of the ground story. But the raised panels on the upper piers cause these latter to appear still too heavy. The making mouldings of the cornice would have been better with more of emphasis, or "accentuation." We have described one of the warehouses in the drawing: there are two. In the less important building the cornice of the other structure runs across. Perhaps it is desirable to try for greater uniformity of levels than is observable in London. But the treatment of the last-named building generally, lessens the effect of the other: it would not have been correct had there been a building on the opposite side to correspond; but as the case is, the subordinate front should have been even plainer than it is, or so as to seem a mere adjunct to the main building.

Mr. G. Aitchison has been giving much attention to the proper treatment of iron, for decorative effect combined with structure; and we look to his lecture on the 31st of next month, calculating to derive information as well as hints from it. But those of his works in which stone, or brick, and iron, are attempted to be combined, are amongst the works which show to us the difficulty of the attempt. In his "Offices, 20 Mincing-lane, City, for Messrs. Innes Brothers" (133), the arrangement of the openings of the first and second floors, where each opening is divided into three lights by iron columns, the centre opening having a segmental arch, and the side-openings lintels, is exceedingly inelegant. The top story in the same building has the too common arrangement already described, of a range of lights each semicircular-arched and divided from the next by a metal shaft, whilst the superincumbent material is masonry or brickwork. The house recently erected in Somerset-street (141) by the same architect, has the arrangement of piers over a brestsummer. There is some novel decoration in the architraves of the windows. The "Cast Iron Staircase" (157) in the Mark-lane building is a much better exemplification of Mr. Aitchison's skill. It is wholly in iron. We believe the working-drawings have cost much labour and thought. We regret therefore that they are not exhibited. The bearers, the risers, and the shafts which help to carry the staircase, all are decoratively treated. No. 175 is the "Doorway, Nos. 1 and 2 Hammond Court" also of premises belonging to Messrs. Innes Brothers.

Mr. T. C. Sorby, who has already been named for much more suitable illustration of his designs than that involving elaborate colouring, has a capital representation of winter-effect in the view of his chapels of Harrogate Cemetery (273). The centre drawing is surrounded by plans and drawings of other buildings of the cemetery. With this exhibitor, Mr. J. T. Lepard deserves to be named at least for the completeness of the illustration of his design (234) "for Labourers' Cottages;" though the cost, 325*l.* the pair, is much too high for a very plain design, and contrasts strangely with the 98*l.* each of the design (146) by Mr. F. Sills, in coloured brickwork. A beautifully tinted drawing is that exhibited by Mr. H. M'Calla (231) "Elevation for the Proposed Temperance Hotel." But, the design though not deficient in grouping of masses, and possessing an effective feature in the roof over what is probably a central hall, shows want of study in the details. Amongst Mr. M'Calla's other works, are some that we must say, are so bad, that we would ask how they came to be hung at all. We have not seen worse Gothic, in these later days, than the "Butchers' Charitable Institution: Almshouses erected to the memory of the late Prince Consort" (232). Difficult as it is at any time to say in words, what should be done, and certain as we are that art requires something else than reproduction of old examples, it is easy to decide against certain courses; and one of these courses is the caricaturing of an old style, and the attempt to produce a work of the style without knowledge of the examples of it. And it is sad to see the erection of such a row of houses as "Sussex Gardens, Eastbourne" (283, in a different style), where Mr. M'Calla casts aside the knot of our question between balusters and railings, as of a balcony, and builds solid brickwork (panelled at the front) upon the landing, boxing-in the space, and fixes an iron balconet railing upon the top of that; and where he exhibits against the sky, certain most cinerary-urn-like terminations, and a statue that may be supposed to have relation with the name given to the terrace, but which has none with the architecture, any more than have the figures of terra-cotta in the Euston-road with the dealers' houses on which they are sometimes placed. There are those who say that the class of buildings of which this "Sussex Gardens" is a specimen, is better liked by the public than good architecture. Will they help us to the knowledge of why that is, and to the remedy? Such architecture, it is to be confessed, is widely prevalent.

There is not much art in the "Design for proposed Royal Arcade to connect Regent-street with Bond-street" (230), by Mr. E. B. Richards. Nothing so well exemplifies the want of appreciation of our art, as the fact that whilst the projectors of the arcade could see the desirableness of catching favourable opinions by a drawing, and could procure the artist to colour it, they could not see the importance of architectural art. They simply avoided in their design all attempt at novelty. The drawing shows a very common-place iron and glass roof, over a thirty-feet way, between buildings of three stories, only uniform in their details. The Burlington Arcade and the Lowther Arcade were creditable works in their day: there are points of merit in them still. It might be easily proved that effect derivable from the architecture, and connected with such merit as there may be in the art of the two works, has to do with the favour in which they are held, and with their success commercially.

Mr. Ashpitel has a work in the press which will contain illustrations of modern French architecture. He exhibits two or three specimens of the plates, giving elevations, parts of elevations, and details (239). Many of the subjects seem to be extracted from the work of Mons. César Daly, only perhaps reduced. Mr. Asphitel also exhibits drawings (243 to 245) showing "Alterations and Enlargement of Church at Great Ilford," the building being Gothicized; and a "Sketch for Town-hall at Hackney" (277), where the Tudor style is adopted, and the tower of the old church as a campanile, has the new work added on to it.

A drawing (113) of the "Entrance to Attingham Park," designed by Mr. Charles Fowler, and erected in 1862, under the superintendence of Mr. S. P. Smith, is exhibited. The design is an arrangement of five openings, the centre one being carried higher than the others, and finished by a pediment. We should have preferred the Vitruvian scroll at the top of the cornice of the sides, either not introduced or made bolder. Several other works, omitted from the earlier part of this notice, can be merely named. They include the Garden Front of the house for Mr. Unwin Heathcote, at Shephalbury, near Stevenayre (125), by Mr. T. Roger Smith, red brick and stone Gothic with pointed arches; Messrs. Austin & Johnson's proposed Church at the Friar's Goose, Newcastle-upon-Tyne (136 and 255) which has a porch or *narther*, the whole width of the west front, roofed with a lean-to returning that of the aisles, and in the interior of which church the architects have not hesitated to show a plain tie-rod and suspension bolt; Mr. R. P. Pullan's "Temple of Bacchus, Teos, excavated for the *Dilettanti* Society" (150), which fails somewhat as a drawing, especially of such a subject, because the details are not clearly delineated; and a good interior of the "New Catholic Church, Turnham Green" (252), and "the Lady Altar, St. John's Church, Hackney;" and front of the Hospice (253), along with some other works, by Messrs. Willson & Nicholl. A drawing by Mr. J. Hebb (270), of No. 83, Lombard-street, one of Mr. l'Anson's buildings, shows the cornice returning at the side, overhanging the building adjoining. It hardly could so overhang legally; and it does not overhang. Perfect accuracy of representation is essential in whatever professes to be a representation. A drawing (272) of a bridge for the London, Chatham, and Dover Railway, on the Dulwich College Estate, designed by Mr. Charles Barry, shows that iron bridges may be made ornamental. Unfortunately few engineers have tried, or at least have been able, to make them so. Mr. J. Brunlees's "Design for Blackfriars Bridge submitted in competition" (184 to 186), however, shows that his work would have been so. The design has a novel and effective treatment of the balustrade; whilst the spandrils are filled in with elegant scroll-work. Sir John Rennie in that one of his designs (212 to 214) where he proposed iron as the material, on the contrary would have filled the spandrils with mere perpendicular lines like common railing. His several designs for a bridge in stone have little variety or striking character. The elliptic arch below a segmental arch is incomprehensible from the elevations only; and the use of cofferdams, now that the practical advantage in every respect, of methods in which they are dispensed with, has been demonstrated, surely comes from prejudice. But we must not proceed to a notice of the competition drawings in this article.

CARDINAL WISEMAN ON LONDON ARCHITECTURE.

THE ARCHITECTURAL MUSEUM.

On Tuesday evening, Cardinal Wiseman delivered a lecture, in the theatre of the South Kensington Museum, before the members of the Architectural Museum, under this heading: "Judging from the Past and Present, what are the Prospects for good Architecture in London?" The chair was occupied by Mr. A. J. B. Beresford Hope, President.

The lecturer said, a great many years ago, early one fine morning in the spring—doubly so, the spring of life as well as the spring of the year—he found himself one of a large party hastening along a road which leads out of Rome. Many others were before, many followed after, until, at last, all met at their trysting-place, and clustered round a learned professor, who was about to be their guide and director in an antiquarian expedition. He might call it their "meet," and from it they went upon a chase across the Campagna, not in pursuit of the fox or the hare, but of the sites of ruined cities. They stumbled along the Appian Way—not then as now cleared and practicable for horses and carriages. Having examined many ancient monuments by the way, they at length found the remains of two cities, not far from each other, in the midst of the plain. The walls were traceable, and they entered by the gates. In one of them there still remained an old bridge, called by the peasants the Bridge of the Witches; but it has since been destroyed. They did not gain much advantage by the examination, either scientifically or artistically, certainly; they did in moral suggestion. There were two cities entirely destroyed. Not a vestige of a monument remained. The history of these two cities, and of others which had existed in the same plain, was contained simply in the record of their destruction. Livy says they were destroyed because they rebelled against Rome after having once been subdued. For 700 years they were as though they had never been, until, in 1824 they were discovered by the professor who then acted as guide. What had become of their villas? What of their monuments? What of their public buildings? Was it possible that time crumbled down stone until it became as dust; and did the great parent reabsorb those materials which she so freely gave before, the moment they had lost their shape and place? This at least was certain, that cities might disappear without leaving a trace behind. Nature thus triumphs over man and reasserts her rights and laws. But, still, man has often put the prints and marks of his passage on the ground in such a manner as to defy nature with all her influences and actions by earthquake, storm, or gradual decay. Some few miles from the cities of which he spoke, stood two ancient temples: not a column was wanting, not a trace of age was to be found, while nothing remained of the city which had surrounded them but its walls. Thus man was able to perpetuate his works and to build that which it seemed to be beyond the power of nature to destroy. In Sicily, many public monuments of a bygone age remained. Columns of temples had fallen, but they were otherwise perfect and undecayed, and lay side by side like soldiers slain in battle. Judging from the past, then, they gained this point, that there were buildings which survived cities, but that in every instance they were the great public edifices, and not those which were raised by individuals. In Athens, in Rome, what had become of the private residences of successive generations? They had disappeared, having often changed their character and style, according to the prevailing fashion or whim of the time; but the public monuments outlived the shock of time. Ten generations of houses succeeded each other, but the Pantheon survived the roll of 1,800 years. And yet the public edifices of the Republic were built of

a stone which was most friable and perishable, while the private houses of the Empire were built of marble or of Roman brick fastened with cement, which could only be broken by an operation similar to quarrying. In looking at the past, therefore, the law and principle which they ought to keep before their eyes as arising from the study, was that public monuments only remained to speak of the magnificence of ancient cities. This rule was confirmed by its only exception. Pompeii did not suffer gradual decay. It was destroyed while at the height of its vigour. It was embalmed in dust, and could now be placed upon the dissecting-table, as it were, to illustrate the private and domestic life of the Romans. The singularity of the exception, however, proved the universality of the rule, that it was only the public buildings of a city which escaped destruction; and consequently it was towards them that the skill, the genius, and the power of the nation and of national art ought to be directed. They were bound to consider the remains of the architecture of ancient nations as something beautiful,—not, perhaps, always artistically beautiful, but, at least, monumentally considered, they had a right to be so called. The past should be accepted with its legacies, judged by its own laws, and not regarded with a feeling of prejudice arising from a preference for one school or for one particular style. Each has in it something excellent and something to be admired. The architecture of each age is a picture of its moral, mental, and social condition. The architecture of a country perpetuates the taste, and feeling, and genius of that country. It becomes the national type, the national style, born, bred, matured, and consolidated by the people who inhabit the land. Have we reached that supreme and final point? Have we matured anything like a style of architecture commensurate with our greatness, our wealth, and our power? What have our peculiarities and propensities, our love of art, our love of nature and of natural beauties done for us in that respect? Is there anything which we could leave behind us which would determine whether London in the middle of the nineteenth century possessed an architecture of her own? Will it not be said by those who come after us that, judging from our public edifices, it is impossible to decide, whether we give a preference to the Mediæval, the Renaissance, the Classical, or any other? This was not saying much for our prospects, judging from the past. It would be very unjust, however, to close the subject there; for if there was a defect where there ought to be a directing power, he could not shut his eyes to the visible, the immense, the consoling improvement which had resulted from private enterprise, directed by private taste. He bore witness, with great satisfaction, to what had been done, and to what was still being done, in many parts of London by individuals, and in places where, judging from abstract principles, it might be least expected. In the business part of the City, substituted for that which in its name seemed the concentration and expression of everything that was hideous and mean in architecture—a warehouse—they now saw elegant edifices, subjects at once for study and for congratulation. He would mention a singular contrast to these buildings. No one now visiting London would look for anything characteristic of its architecture among the mansions of the rich—those monotonous rows of houses which Canova had called long brick walls with lines of slits. Not that he wished to find fault. He wished to explain that the aristocracy of the country were more partial to expending their means among their ancestral seats, and no doubt many noblemen had raised beautiful and sumptuous buildings in the country. Here and there, too, in the aristocratic quarter of London there was a noble mansion; but such were the exceptions to the rule he had spoken of. It was, therefore, with all the greater pleasure, he saw an improvement beginning to manifest itself in the City. In fact, the beginning might be said to go back to a time before our day. A foreigner standing at a point at which he could see the Bank, the Exchange, the Mansion House, the Goldsmiths' Hall, the Telegraph Office, would, in this very splendid forum where so many public buildings are collected, see at a glance the keys of England's prosperity not inharmoniously collected there. Radiating from that point were to be found evidences of an improving taste and finer feeling. It was pleasant to see the wealth made by commerce flowing back upon architecture and art; and it was gratifying to know that the power of indulging good taste generates it and brings it into action. He had alluded to places of business, he would next refer to another class of buildings, which had become exceedingly frequent in the metropolis, namely, churches, school-houses, and charitable institutions, which he rejoiced to see rising in every direction. He called them private buildings because they were built and supported by private benevolence. He regretted that here he could not speak in the same warm terms as before. No harmonious rule was observable in their construction. Sometimes the style was the Venetian, the Mediæval, the Classical, the Renaissance; sometimes almost the Turkish. There was not about them a distinctive type which would speak of the character and condition of the people. There was, no doubt, something here and there to indicate that we were gravitating towards the great and the good; but they were not yet quite in the right road. Solidity was an excellent quality, but it should not be allowed at the expense of elegance. There was an inclination to sacrifice beauty to mass, and to have great walls decorated with strongly-contrasted lines of inharmonious colour, sometimes grimly disposed. They were not soothing,—they did not appeal to the heart. And sometimes symmetry was a little too conspicuously despised. Prominence and relief were also neglected, or treated with contempt. There were faults, but the feet were trying to get on the better path: the hands were stretched forth to grasp at something more perfect. No doubt genius would purge the architecture of this time of its defects, and what was rude and in some respects overbearing would gradually be expelled. Working with brick was working with the lowest material. Brick was made in the days of Nero, but it was a well-formed and beautiful material, the interstices filled, and all so moulded as to be emulous and imitative of stone. The new material, terra-cotta, of which he had seen many beautiful specimens, gave promise of a brighter epoch in architectural art in the way of ornamentation. They might say, "You are speaking of London as if it was about to be destroyed and rebuilt." He contemplated no such thing. The conflagrations of old times need not now be dreaded: earthquakes were not now to be feared, although they had recently experienced a shock; and diplomacy had taken the place of blowing up cities and sowing them with salt. Gaps must, however, from time to time occur in London, and these gaps must be filled. They could not tell the change that might take place in the future, or how far the edifices which were now building in the City would continue to be useful for the purposes for which they were now intended. He trusted such a change would never occur. It was certain that, in the City and elsewhere in the metropolis, whole ranges of buildings were being removed, and their inhabitants obliged to locate themselves elsewhere. In the City, particularly, a very remarkable transmutation was going on. Squares well built, and formerly inhabited by persons of rank, —judicial rank, particularly,— were now given up to business, and the increasing demands of the law were absorbing a considerable space. It became him to speak with respect of the law; but it was a fact patent to all that, wherever it threw its meshes over a district, architecturally, it certainly exercised a deteriorating influence. The buildings in Lincoln's-inn showed that, as a society, lawyers were capable of doing great things; but he spoke of the influence of the daily abode of jurisprudence: the doors became dingier, the areas and lobbies more spider webby, and he only hoped that those who lived within kept their hands cleaner than their windows. Vocations and professions and occupations in London must waver and change. London was growing out in one direction, but how? Day after day he saw rows of houses, by twenties and by fifties, of which it might be said that a mould was put over one when completed, and used in the construction of all the rest; and, no doubt, if they looked into the contractor's book, they would see the cost of one, and then a long line of "ditto—ditto." The outskirts of London were delivered up to this sort of edifices, constructed for a temporary purpose, to last during the continuance of the lease of ninety-nine years. Meantime, he hoped that London would become a city worthy to be the capital of a great, a powerful, and a prosperous nation. Looking at the past, and judging from it of the present, he regretted to find now existing so great a want of reverence and respect for the great, the good, the beautiful, in itself or in its associations—the absence of a feeling that everything is not to be balanced by the realization of a passing advantage or a pecuniary gain. It must be discordant with the artistic taste of the architect to be conscious that however beautiful the edifice he erects, it may in a year or two succumb before some "profitable speculation," and be reduced to a heap of classified rubbish, beginning with "Lot No. I." The only thing considered seemed to be, how much would it take to buy it up, or, if necessary, to obtain a compulsory Act to sweep it away. People otherwise well educated did not seem to know that architecture, as well as painting and sculpture, was an art. It appeared from the report of the City Engineer, that public companies had applied to Parliament for power to carry out schemes which would involve the removal of the Monument on Fish-street-hill (and, though he had no sympathy with some of the suppositions connected with it, still it was a monument to commemorate an important fact in our history, and should not be disturbed), the Apothecaries' Hall, a portion of the *Times* Office, the Admiralty, Whitehall, and various public buildings and city offices. He had himself received eight notices for the total demolition of churches, schools, or charitable institutions, and others it was proposed to burrow under. He understood that Old St. Pancras burial-ground was included in an Act of Parliament, and to be handed over to a public company. Here two of his nearest of kin had reposed for over half a century, and it was never thought that their remains would be disturbed until time should be no more. This was a want of reverence as to which they might well learn a lesson from the heathen. It appeared, too, that the different companies required 160 acres in the city, or as the City Engineer reported, one-fourth of its entire area, that the total length of the lines projected to run through it was twenty miles, and the number of public ways to be interfered with over 300. It reminded him of the fate of a bungalow in which a gentleman resided in Southern Africa. It consisted of one long room, and one day the gentleman was writing, when he was alarmed by an invasion which he little expected. An enormous black elephant, on its way, perhaps, to a dainty meal, did not take his line of deviation and go round the cottage, but just put one huge foot through one wall, and totally disregarding the shower of roof and wall which fell on him: but failed to tickle his tough hide, put another huge foot through the opposite wall, and passed out. So it was with the railway invasion. Houses were pulled down, and when the lath-and-plaster shower cleared off, it was found that another was undergoing the process of demolition. It was proposed to cross Ludgate-hill by means of a viaduct, and thus interfere with the view of that magnificent edifice, St. Paul's. If it must be so, could it not be made ornamental —even monumental? The ancient aqueducts by which Rome was supplied with water were so contrived that even in their passage over the gates of the city they were made to add to its beauty. Under the spot where it will cross, two funerals of the representatives of our military and naval power had passed to that great church —Wellington and Nelson. Why could not reliefs commemorative of these events be placed one at either side? It might be so carried out that the fact that a railway was behind would be overlooked. The cost would not be great, as at that elevation the finish need not be fine, and it would be a lasting tribute to those who had gained for themselves immortal honour. It should be great and noble in art, having the double object he had pointed out. Art and Science might thus be conciliated: that which would be hideous, might thus become graceful and elegant. Science could bear Art on its stout shoulders:—why should not Art fly up and invest it with grace and beauty? The prospects of architecture in London were very promising, but they would be immensely promoted by exciting in the people a reverence for relics of the past, and a taste for the beautiful.

The lecture occupied more than two hours in the delivery, and was listened to throughout with the greatest attention by a crowded audience.

BUILDING LAND FOR THE OPERATIVE CLASSES. The first portion of the Plough Lane Estate, Battersea, which will be laid out for the erection of nearly 300 dwelling-houses and shops for the working classes, has been allotted by the Conservative Land Society. The prices of the plots range from 47*l.* up to 500*l.* each. For the last specified plot, having a house thereon let at 40*l.* per annum, there was a keen competition.

GARDENING AND ARCHITECTURE.*

The harmonious and tasteful association of landscape gardening with architecture, to the mutual advantages of which we have before now referred, ought to be more considered and practised at, both by architects and by landscape gardeners, than is usually the case. Every architect ought, to a certain extent, to have a knowledge of landscape gardening; and to this end he cannot do better than provide himself with the work under notice. Mr. Kemp's book is not a mere make-up from Loudon and others, but contains the fruits of his own experience in practical landscape gardening,—an experience which appears to have been considerable, and to have been guided by both taste and judgment. Mr. Kemp seems to be fully conscious of the importance of the tasteful association of architecture with landscape gardening. He rightly thinks that—

"It is much to be regretted that architects and landscape-gardeners do not more usually work together, in complete unison, from the very commencement of any undertaking in which they are jointly consulted; and he who would produce a work in which the relation of the two arts to each other, and the elements of garden architecture and of architectural gardening, should be skilfully handled and tastefully illustrated, would deserve the thanks of the entire art-loving community."

In speaking of "trees adapted to associate with different styles of building," he truly remarks that no subject, perhaps, is less studied by landscape gardeners, or occasions more alarm in the mind of an architect than the necessity that exists for assisting the effect of houses by the judicious introduction around them of a few trees or shrubs at the right points; and he refers to the entrance front of Blenheim as an example, on a great scale, of the want of such an association of architecture with a little landscape gardening. Of the sorts of trees to associate with different styles of architecture, he says;—

"Mr. Repton, in his 'Sketches and Hints' on landscape gardening, lays it down as a general principle, that round-headed trees harmonize best with Gothic forms of architecture, and trees of spiry shape with Grecian buildings; on the ground that the horizontal lines which prevail in the latter style, and the perpendicular in the former, are best exhibited and relieved by contrast with vegetable forms of an opposite character. Without questioning the soundness of the rule, which appears quite unexceptionable, it may be doubted whether, in the case of Grecian and Italian structures, at least, the appropriateness of the fir and cypress tribe is not the result of association; as the Cedar of Lebanon, the branches of which are purely horizontal, is the most magnificent of all accompaniments for any variety of Grecian architecture, but is not at all suited for either of the forms of Gothic. And so perhaps, the old ancestral elms and oaks, in which many an English Gothic house is often embosomed, may, by the commonness and antiquity of the usage, have given a propriety to the employment of that kind of tree in relation to all similar edifices. . . . Light, thin, and feathery leaves characterize *all* the plants that look best when in contact with the varied class of Grecian structures,—the heaviness (or rather massiveness) and regularity of Grecian forms demanding some such contrast and mitigation. Gothic buildings, on the other hand, already light and playful, full of variety, and abounding in small decorations, require more of the depth and breadth of foliage for which round-headed trees are conspicuous, to bring out their elegance, and impart, at the same time, a more substantial character.

Practically applying the subject, however, the very upright and the very horizontal forms of trees,—such as have spiry heads, and those of which the upper branches are nearly flat,—may occupy any desired position in the neighbourhood of Grecian, Roman, or Italian houses; while shrubs of similar (but chiefly upright) habits, and such as are pruned or trained into standards, with formal heads, will suit gardens laid out in any kindred style. In addition to those which have been named, I may note the Deodar cedar, the *Araucaria imbricata*, and the hemlock spruce, with the cypress tribe, and especially the Irish yew, for gardens, as deserving of particular praise. Larch, birch, acacias, the purple beech (though principally for its colour), the fern-leaved beech, the Turkey oak, and the lime, will further be suitable for the same style of erection.

On the principle above suggested, besides the numerous species of round-headed trees, of which the sycamore for westerly districts may be specially signalled out, and the horse-chestnut and Spanish chestnut for more inland counties, all the broader-leaved sorts of ornamental low trees and shrubs will be preferable for the immediate vicinity of Gothic houses. Portugal laurels, common laurels, different kinds of magnolia, ivy, hollies, the yew for its dark sombre colour, the arbutus, aucubs, &c., will all be to some extent harmonious. And commoner and less exotic plants may generally be brought closer to a Gothic house without injuring its effect, than they can be to any more classical structure. The latter seems to require associating with more foreign species.

Gothic architecture is rather improved by a framework of trees: Grecian only just tolerates them. With either style, however, the sudden dip of the building to connect with it a low wing, or the equally abrupt rise to form a tower, may often be softened with advantage by the introduction of a good and appropriate tree in the angle, if this does not cover any windows or other detail of consequence. In the same way a suitable lower plant or shrub in a deep angle of the building, or at a very bare corner of it, will sometimes divest it of a cold and naked appearance, and adorn rather than deface it. If one corner of a building stands higher above the level of the garden than the other, as will sometimes be the case on sloping land, it will particularly require help from a good large shrub or group at the corner that rises most out of the earth, to give it the requisite balance.

The high ends of buildings frequently demand some kind of plants to support them, and take off the hardness of their edges. No building should appear altogether naked and alone, but form a constituent part of a landscape. If the lines, therefore, be not duly carried down in the erection itself, and blended with those of the ground,—a thing which can very rarely be accomplished,—the effect of connexion should be attained by accompanying trees. Where a house is placed on a knoll, mound, or other kind of elevation, some such assistance becomes all the more essential. But the trees need not in all cases approach closely to the end of the building; as enough of a union of lines and balance of parts may mostly be produced by placing them at a little distance from it."

Statuary, vases, and similar architectural ornaments, Mr. Kemp regards as the fitting associates of Grecian and Italian houses, and less suitable in relation to every other style; not that such things as low terrace walls, with or without tracery, pillars for sun-dials, ornamented with the details of pointed architecture, and even vases or urns of a particular form, and with proper decorations, will be faulty in connexion with Gothic buildings, and formal gardens of the same character; only the varieties of the Grecian style, with their architectural arrangement of walks, beds, &c., would appear, he thinks, most to correspond with and demand such ornaments as vases, tazzas, urns, pillars, sculptured figures, basins of water, with fountains, and the like things, to carry out and finish their expression and design.

In discussing the subject of the association of gardening with architecture, more especially with reference to gardening, under the heads of "Garden Architecture" and "Architectural Gardening," the author says;

"Gardening and architecture, like all the fine arts, have much in common. And that department of architecture which belongs more exclusively to the garden has, especially, a great affinity with gardening in its broader principles. In fact, there is much more relation between the two than is usually admitted, or than the ordinary products of practitioners in either art would at all justify us in believing.

Architectural decoration is not, as many would assert, unfitted for English gardens, on account of the coldness and dulness of our climate; because stone gets speedily weather-stained and sobered down in colour, and the fine evergreens and beautiful grass of this country will, in association with architectural objects, impart sufficient warmth of tone. France, Italy, and even China, have been more zealous in applying garden architecture than Great Britain. And the earlier specimens of English gardening are often richer in architectural features than those of a later period. There has, indeed, been a subsequent retrogression in this branch, in consequence of the introduction of a more natural manner; for gardening, like most artistic pursuits, has had its historical cycles.

Modern tendencies in gardening have been too much *away* from its character as *an art*, and the more it is restored to its legitimate position, the more nearly will it be brought into kindred with architecture. On the other hand, the too commonly cumbrous, regular, and unyielding nature of architectural objects, when used for garden decoration, has tended still further to detach two pursuits which are essentially and obviously allied. For, as a house is a law of the universe that the boundaries of each domain in the natural kingdom should insensibly mingle and be lost in each other; so it is plain that an unrestricted taste would be most gratified when the province of architecture is extended so as to embrace lightly and harmoniously such parts of the garden as may be most contiguous to the house; while the garden also, in these parts, rises in character to meet the requirements of the architecture, until either art is so refined and attenuated that it would be almost difficult to say what belongs exclusively to each. . . . . .

The province of garden architecture is, primarily, to supply fitting appendages and accompaniments to a house, so that the latter may not appear naked, alone, and unsupported. If judiciously applied, it will be effective in helping to produce a good outline or group; to carry down the lines of the house; to connect it with other buildings, such as a conservatory, arbour, &c.; to provide a proper basement for the house, to afford shelter and privacy to a flower-garden; to extend the façade or frontage of a house; to shut out back yards, offices, &c.; to enrich, vary, and enliven the garden; to supply conveniences, such as shelter, receptacles for birds, plants, sculpture, &c., with museums for works of art, or specimens of natural history, and supports for climbing plants; to indicate refinement, wealth, and a love of art; and otherwise to blend the various constituents of a garden with the house, and harmonise the two by communicating a more artistic tone to the garden.

Wing walls to a house, broken by a conservatory, and terminated by a summer-house, aviary, museum, or sculpture-room corridors, similarly broken and terminated, and glazed or open so as merely to form covered ways; conservative walls, either glazed or simply protected by bold projecting piers and copings; viaducts, aqueducts, arbours, arches, arcades, tunnels, boat-houses, temples, prospect and flag towers; with an almost infinite number of smaller objects, such as sculptured figures, sun-dials, statuary, pillars, obelisks, terrace walls, &c., constitute the elements with which garden architecture has to work.

In its leading traits it necessarily comes within the same category as house architecture, and is governed by the same principles. Like the house, it should exhibit design, some degree of symmetry, harmony of parts, unity of expression, consistency of style, fitness for the locality, adaptation for the intended purpose, and stability and permanence of appearance.

But it should also display a greater amount of lightness and elegance; a *comparative* absence of regularity; a decorative rather than an exclusively useful purpose; a superior variety of outline; extreme attention to general grouping; a blending of its forms with those of nature; an especial regard for placing its creations where they will have a distinct meaning and object; a leaning to the use of good materials, but somewhat rougher than those employed in the house; a preference rather for a picturesque *outline* than for mere ornamental details; and, as a most important characteristic, a marked boldness and prominence of parts. Indeed, picturesqueness, such as would be occasioned by changes of level in the ground, by diversity in the heights of walls, by prominent piers, buttresses, or cornices, by broad projecting eaves to the roofs of buildings, and by any arrangement that will yield depth of shadow, should be the ruling constituent of garden architecture."

The first edition of Mr. Kemp's able and well-written work was considerably smaller in size than the second, which, however, was also rapidly sold; and, after being for some time out of print, the present still more elaborate edition has been issued, with many additional woodcut illustrations, a larger page, and extended text. The work altogether is a thoroughly practical one; and reference is facilitated by a good index. As noted in the title-page, it is intended to be of use in the laying out or improving not only of large estates but of small places, such as suburban villa gardens of a quarter of an acre and upwards.

* "How to lay out a Garden: a General Guide in Choosing, Forming, or Improving an Estate." By Edward Kemp, Landscape Gardener, Birkenhead. Third edition, enlarged. London: Bradbury & Evans, 1864.

ON THE PRINCIPLE OF IMITATION AS APPLIED TO THE DECORATIVE ARTS.

This was the title of the paper read by Mr. Thomas Purdie at the Society of Arts on Wednesday, the 6th. The following portion of it will show its bearing:—

There is a palpable fallacy contained in an argument which places in the same category imitations of objects which are used solely or chiefly on account of their beauty, and those which are used solely or chiefly on account of their suggesting ideas of cost. A fancy wood or marble is an example of the former, a precious stone of the latter. You may deceive by making an article which possesses little real value resemble a costly one; but to speak of deceiving as to beauty is a simple absurdity. The appearance of cost and value may exist without the reality: the appearance of beauty and the reality are one and the same thing.

Such a thesis as that which we have been disputing could not be maintained consistently throughout, so we find it stultified by the admissions of its author. "Gilding," he says, "has become, from its frequent use, innocent. It is understood," he says, "for a film merely, and therefore is allowable to any extent." I cannot admit the abstract justice of the doctrine contained in this passage, for it would go far towards justifying any practice, however absurd, which might happen to have the sanction of antiquity; and it is certainly altogether at variance with the principle on which imitations are condemned by the same author. According to this doctrine, gilding must at one time have been wrong. But that which is originally wrong can never be made right by repetition. On the contrary, it is common to hold that what is here advanced as a palliation can only serve as an aggravation of the offence.

It is hoped that we have already found sufficient justification for using imitations of materials, such as fine woods and marbles, in all legitimate situations; but this passage, if we could avail ourselves of it, and if justification were needed, would afford all that could be desired, for the use of these imitations has been for a long period so common, that however deceptive they may be, they will seldom, if ever, pass for aught else than what they are.

These remarks on gilding betray a total misconception as to what decoration really is. Decoration is a thing of surface, not of construction, although the construction will frequently indicate what the decoration ought to be. You have no more reason to suppose that a thing is solid gold because it is gilded on the surface, than to suppose that a lady is silk because her outer garment is composed of that material, or that you would find the downy surface or the delicate tints of the peach at whatever point you may intersect it. The apology, therefore, tendered for gilding is not only superfluous, but of a character which could not have been accepted had an apology been necessary.

This brings us to point out, as we proposed to do under the third division of our subject, the qualities which give their value to decorative appliances. These, which we name in the order of their importance, are—

1st. Beauty.
2nd. Durability, and
3rd. Costliness.

We have just been speaking of gilding. For

its employment we require no other apology than the possession of the above-named qualities; and in this respect it stands on precisely the same footing with almost all other decorative appliances, cement or plaster, metallic coatings of bronze, silver, or gold, paint, silk, veneers in wood, marble, or free-stone. Our principle is of universal application. A lady makes the dress which is to be seen of silk, her under-garments of a cheaper and less showy material. You veneer a plain inexpensive wood with one of a richer hue and of a more expensive quality. You coat your brick or rubble walls with cement, with paint, with ashlar stone, or with marble. They are understood to be mere coatings, thicker or thinner as the case may be. Zinc is coated with bronze, bronze with silver, and silver with gold, and in doing this we simply follow a natural instinct, and the example which Nature herself has given us.

We shall now try how far stucco and scagliola, or painted imitations of marbles, possess these three qualities of beauty, durability, and expression of cost.

First, as to stucco. It seems to be felt necessary that some expedient should be adopted for adorning the unsightly brick buildings of which such a town as London is chiefly composed. This is effected by the material under discussion, either by an entire coating, or by means of projecting facings, thus adding force to the outlines and principal features, and contributing to the composition those elements of light and shade so essential to the beauty of the architecture, and in which brick buildings are generally so deficient. It certainly is not the fault of bricks that they are not ornamental, seeing they can produce such buildings as the Ospidale Maggiore of Milan, the Certosa of Pavia, or even such examples of street architecture as those recently erected in Cheapside, which are now daily arising around us. But the ornamental bricks, or terra-cotta used in the construction of these buildings, being simply moulded as is the stucco or cement, are liable to precisely the same condemnation. Brick architecture of such a character would leave nothing to be desired, but it is to be feared the expense will interfere with its general adoption. The expedient usually resorted to for getting rid of the dull uniformity and flatness of brick erections, that of bands, lozenges, and squares of various colours, seems to me as barbarous as the tattooing of the savage and of precisely the same nature. The lines and forms seem to destroy the contour of the building by substituting stronger markings than those which are presented by the solids and vacuities. They withdraw attention from the principal architectural features—from the form and outline of the building which give it character and expression, and in which, as in a face, the beauty is chiefly to be found.

Stucco, then, supplies a want—in cases where stone is not to be had, or where it is too expensive for general use. In regard to its possession of the three qualities we have named; in beauty it is nearly equal to stone, because it admits of the same identical forms, and if properly treated the difference between the two surfaces is scarcely appreciable: in durability it is, of course, inferior to stone. But such beauty and such durability as it does possess are absolute qualities, and in regard to these stucco does not occupy the position of an imitative material, for it is obvious that beauty and durability do not admit of imitation. As to expression of cost, stucco expresses more cost than plain unadorned brick, and less than stone. It is, therefore, a less noble material than the latter, so that its use will be restricted by the conditions to be afterwards stated.

We may here remark, in passing although not quite germane to this part of the discussion, and although forming, it may be, an *argumentum ad hominem* rather than a general argument on the subject that so long as stucco remains unchallenged as a decorative appliance for interiors, it will be difficult to show why it should not be employed subject, of course, to conditions—on exteriors also.

Scagliola and painted imitations of marble stand on precisely the same footing. Their beauty arises from various sources. One of these is inherent, due to the colour shading and veining, which, constituting the loveliness of the real object, are found, only in a less degree beautiful, in the representation. The second source of beauty is the taste, skill, and ingenuity displayed in the execution of the imitation, which the practised eye at once detects; while a third class of beauty may be discovered in the deceptive character objected to, and which forms, we hold, a legitimate appeal to the imagination. No doubt such imitations are wanting in beauty of the highest class: they do not engage the greatest faculties of the artist: they do not suggest great thoughts; but such beauty as they do possess is derived from sources which are quite legitimate.

In durability they are, of course, much inferior to real marbles, although greatly superior to most other styles of painting in use for internal decoration. From the smoothness of the varnished surface they are easily cleansed, and at the end of thirty years will be found to have suffered less from tear and wear than plain paint would have done in a third of that time.

As expressive of cost they are of no mean value, though, from their inferiority in this respect to the originals, they will be excluded from use in many cases by one of the conditions I shall specify.

I now proceed to lay down and illustrate the last division of my subject—the conditions which ought to regulate the employment of surface coatings. These are,—

1. That they be not employed to imitate a material where the original itself would be out of place.

2. That no object be painted or otherwise made to imitate one material which, from its form, construction, or application, is obviously or necessarily composed of another.

3. That no inferior surface coating be employed where we should expect one more expensive, and no imitation where we are entitled to find the real material, or where the discovery of an imitation would create disappointment.

Every one may supply himself with illustrations. For example, as to the first condition. Imitation marble should never be used on such positions as ceilings, where the construction is obviously a wooden one; nor on shop-fronts in crowded thoroughfares, where the real material would be destroyed as soon as exposed, and where it would therefore be out of place.

In illustration of the second condition, we may mention that elaborate delicate carvings should not be painted to represent granite, nor iron columns wood or marble, where these materials are unfit for the duty, in the way of support or otherwise, which the iron had to perform.

In regard to the third condition. We have said that decorative appliances are valued for three qualities—their beauty, durability, and expression of cost. We may assume that the rank or wealth of the person who owns a work of art, or who makes use of a decorative appliance, will not alter our estimation of its value or fitness, so far as these are imparted by the two first-named qualities, beauty and durability. Our ideas on these points may be said to be absolute, except in so far as they are liable to be changed with regard to beauty by the influence of fashion.

At the close of the paper,—

Mr. J. G. Crace said he would preface the few observations he addressed to the meeting, by stating the great pleasure he had derived from the paper that Mr. Purdie had read to them. He thought it not only reflected great credit upon that gentleman, but upon the profession to which Mr. Purdie and himself belonged; and though he might not quite agree with all that had been brought forward, he thought their differences would not be material. First of all, he thought he might allude to a little confusion in Mr. Purdie's argument with reference to imitation. The true object of art he took to be imitation. the right application of imitation was another matter. The more perfectly a painter represented the subject of his picture, the more real and perfect would be his excellence in his art; but in using imitations the question of appropriateness and suitability must be borne in mind. He would begin with the use of stucco on the exterior of buildings. He thought, as influencing the progress of art, its use had been pernicious. It certainly afforded great advantages in the preservation of the exterior of buildings, but it also furnished such facilities for false representations and bad construction, and for hiding so many faults, that whatever its advantages might be, he considered they were neutralised by these objections. If there had been no stucco, long before this our artists might have introduced the beautiful forms and decorative features to which brickwork could be so well applied. He maintained that, in our street architecture, we were only now beginning to realize the beautiful forms, colouring, and architectural features of which brickwork was susceptible. Mr. Purdie had instanced some glorious examples in the buildings which abounded in Milan and other parts of Lombardy, where the most beautiful forms, with good effects of light and shade were produced by the employment, not of moulded bricks alone, but by the proper application of ordinary bricks, placed at certain angles and depths. If buildings such as were now designed had been erected in our country twenty or thirty years ago, it was absolutely certain that architects would not have attempted to conceal the brickwork by a covering of stucco, so as to make it look like bad stone, in addition to which a row of buildings monotonously alike were often painted a variety of shades, utterly destroying all harmony of effect.

Stucco in the interior of buildings assumed a different position altogether. It became then a legitimate covering to the construction, imparting a surface to a rough material. In ceilings, cornices, and walls such an application was useful and legitimate, unless they were content to have the brickwork shown inside, which he did not think would be satisfactory. They covered it with a material which could be made to assume any required form and colour. He thought, however, the great sin of ordinary house decorators was to use their paint when it was not wanted. In building a house, instead of leaving the wood-work to show itself, which he thought a legitimate plan, they put on several coats of paint, destroying the sharpness of the mouldings. If the wood were plain deal, and if a little more money were spent in the preparation of it, and then it was simply varnished and allowed to pass for deal, it would look infinitely better than half the elaborate colouring and graining put upon it. The wood itself might be legitimately decorated by light or dark lines of colour or by gilding. On one occasion he was called in to decorate a building in Scotland, where he found the wood-work of pitch pine, beautifully executed, but they had begun to paint it. He stopped this, and merely had the wood varnished, and though this was done many years ago, it looked as well as ever. Then again, with regard to graining, he thought this was too freely used. A whole tint worked up with varnish would look better and last as long as imitations of maple or other fancy woods, and the idea of a sham would be got rid of. The same remark applied to imitation of marble. A corridor might often be made far more tasteful and equally durable, with plain colour properly applied. Marbling was perfectly unsuitable for the style of houses in which it was frequently applied, though, if a hall presented a fair architectural appearance, he had no objection to imitation marbling where the real marble would not have been out of place. Then again, with regard to gilding. He thought "white and gold" was a perfect god-send to ordinary house decorators. They took no trouble to exercise taste or judgment by decorating with harmonious arrangements of colour, which presented considerable difficulties to incompetent persons, but felt themselves safe in recommending white and gold. It was sure to look simple and beautiful, but it prevented the march of taste in the decorative arts. Sometimes a delicate tint of green was suggested, but there appeared to be no desire to get beyond the hackneyed style which prevailed too much in the present day. He thought men should endeavour to improve upon what had been done before. Mr. Purdie, in his paper, had condemned the improper application of imitation, in which view all persons of sound taste must agree. Mr. Purdie had also remarked that they would, of course, expect in a nobleman's house that silver or gilt plate would be genuine; but that in more humble houses imitations were allowable. He could not agree to that. He thought that in a humble home it was bad taste to ape the splendour of royalty or nobility, however cheaply gilt objects might be produced. Silver was better than gilt brass. It was more satisfactory to use a material which was what it pretended to be, rather than an imitation of something else.

Mr. J. Beavington Atkinson said they ought to feel greatly indebted to the author of the paper for drawing the very important distinction which existed between ethics and æsthetics. No doubt much confusion had of late years been thrown into the sphere of the fine arts by mingling together elements which belonged rather to the sphere of ethics than to that of æsthetics: the danger of this was the greater because mere rhetoric was exceedingly taking with the general public. A critic, for example, who should write that a picture had thrust a dagger at the moral

use of the public, would probably find an echo many drawing-rooms in this country; and yet believed persons acquainted with the subject ould know that such a criticism was in all probility little better than nonsense. While he oke thus strongly, he yet was one of those o firmly believed that there were certain ndamental principles which governed the conation, and, if he might say, the morality of e fine arts; and the first and most essential rinciple was this, that the idea sought to be pressed, the essential and central thought to embodied, should be of the noblest kind, and at being established and fairly rooted in the ind of the artist, he thought secondly would me the consideration by what instruments id by what means the artist might best incorate and express that idea. Those two prinples, he believed, constituted the truth, the obity, and the purity of the fine arts. Now, to the means which an artist had to employ, really knew of nothing more practical, or ything better, than the doctrines of old laid own respecting drawing, composition, light, ade, and colour. He believed in these would found the true decalogue of the arts. As for e material, this, as he had already indicated, ust be subordinate to the intent. A statue ight be executed in clay, terra-cotta, plaster, arble, or gold; and he ventured to say, of all ose materials the gold would be the least adirable. The heroes of the world were not ccustomed to be clothed in gold. They spoke r what they were, for what they had done; and he expression, the intent of the work, conituted in fact its true nobility. Now, as to the bject of imitation, important and, he thought, ue distinctions, had been laid down by Mr. urdie. He would add to what that gentleman id said, that, perhaps, the primary question, fter all, was what should be imitated. A brass ettle in a Dutch picture could not have much dignity; but, if they took Holman Hunt's picure of the "Finding of Christ in the Temple," nd if they observed the fidelity with which he artist had there imitated the transparency nd the expression of the eye of the Saviour, he thought there they would find that imitation had attained to something like divinity. Imitation, therefore, was not an evil, but it was a means to an end. That was obvious: and he thought it was undeniable that the more perfect the imitation the better. With regard to the perfection of that imitation, and the mode of its application, much depended upon what the artist should emphasize and what he should leave out. If he directed his attention to what was really great, that imitation would then attain a great and dignified end; but if he descended to what was small and paltry, then his work was so far marred, and the imitation, which, as he had said, was in itself a worthy instrument, then became degraded. So far for imitation and its worth, and the mode in which it should be employed. He would now say a word upon what had incidentally fallen from Mr. Purdie, on the subject of coloured statues. He might state upon authority, for he had often conversed with Mr. Gibson on the subject, that the purpose of that great sculptor in colouring statues was not to attain to naturalistic imitation, but rather to conventional treatment. He (Mr. Atkinson) was not an advocate for the colouring of statues. It was a most difficult question; but it was, perhaps, right to put in this plea—that statuary, when coloured, became the sister of coloured architecture. Mr. Purdie would allow that it was possible to decorate the interior of a building to such an intensity of colour, that white marble would appear cold, crude, and inharmonious. That this had been felt in all countries, and in all ages, was manifest by the uniform practice of artists. Bronze was, in fact a colour. The employment of coloured marbles was of course the adoption of colour; so that, independently of the mere question whether they would colour white marble, which in itself was a lovely material, they could scarcely resist the conclusion that, under certain circumstances, coloured statues become inevitable. He need not say the detailed and varied management of colour in such cases was most delicate and difficult, and must be a question of subtle artistic treatment. What was the conclusion? He thought it was simply this—that a work of art depended for its worth principally upon the idea which it expressed; secondly, upon the aptness of the instruments employed as the language for expressing that idea; and thirdly, that the material might be valuable on many accounts, for durability and for other qualities, but that all such questions of material should be kept subordinate to the idea to be expressed, and the thought and purpose which the artist endeavoured to embody. Reverting to the distinction which had been justly drawn between ethics and æsthetics he would say that works executed on the principles he had ventured to inculcate, though not falling directly within the sphere of ethics, were in all points consonant, and might be made cooperative with true morals and pure religion.

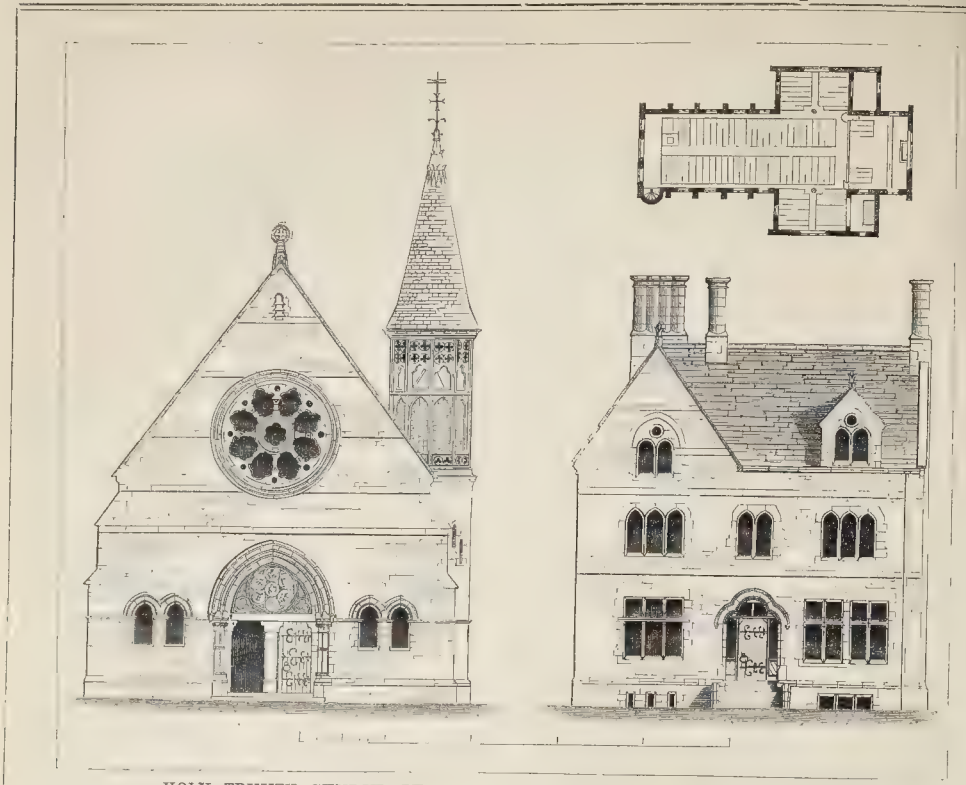
The Chairman (Mr. Hawes), in proposing a vote of thanks to Mr. Purdie for his paper, remarked that he could not agree with some of the observations that had fallen from Mr. Atkinson. He was startled to find that that gentleman justified the colouring of statues, and not only justified it, but did so in terms which appeared to contradict the conclusions he subsequently arrived at. Mr. Atkinson had said that, in colouring the statues at the late Exhibition, there was no endeavour strictly to imitate nature — not to produce the most perfect imitation possible, but merely to conform to conventional ideas—to lower high art to the conventional taste and tone of the day, and to attract admiration from those whose education had not taught them to appreciate the highest style of art. The essence of sculpture was form, and marble was a material which was specially suited for conveying the true spirit of sculpture to the mind. Colouring took away the effect upon the imagination: it destroyed the great principles upon which sculpture was based, degrading it to a lower class of art. Another branch of the subject was what should be understood by the legitimate use of imitation. There was a pleasure to be derived from the contemplation of the imitation of the beautiful objects of nature, apart from the gratification afforded by the objects themselves. The works of Barry, on the walls of the room in which they were assembled, were an imitation undoubtedly, and the perfection with which the objects were represented was in itself a source of pleasure. This was an instance of an appropriate employment of imitation. He was obliged to Mr. Crace for the suggestion as to the more extended application of the ordinary woods in the fittings of rooms. At the same time, as the practice of painting and varnishing seemed to have been almost universally adopted, it was only fair to infer that there were some good reasons for the universality of this practice, and that by some means the conclusion had been arrived at that painting was the best mode of covering defects and giving durability. It was, therefore, reasonable to suppose that the practice was supported on some grounds of public utility and economy. With regard to another branch of imitation which had been so thoroughly anathematised by Mr. Crace—stucco, he would say that the reason why ornamental brick buildings had not been erected in this country, as in Italy or Flanders, had been mainly owing to the fact that, until the last few years, the manufacture of bricks was under the control of the Excise, by whom the size and mode of manufacture were restricted within certain defined limits, which might not be departed from. But when they got rid of the excise, and were allowed to make bricks as they pleased, it had already been seen how such materials might be successfully used in the ornamentation of our street architecture.

KING INA'S PALACE.

Last October we inserted a letter signed F. S. A., condemning the manner in which the structure in South Petherton, Somerset, known as King Ina's Palace, had been dealt with. The indignation of the writer was expressed in somewhat stronger terms than we usually admit, but as the letter was written by one of the most eminent and best-known archæologists in England, and the complaint in it was moreover repeated by other correspondents, we gave it a place.* In the following week we printed a note from an architect, in his own name, agreeing with F. S. A. as to the "mutilation" of the building. Immediately after this we received a letter signed "Joseph Chapman," dated from Frome, stating he was the person referred to by F. S. A. (by whom no name had been mentioned), and offering, if the latter would "lift the visor," to break a lance with him on any issue he might choose to raise respecting the manner in which the restoration of Ina's Palace had been effected. Mr. Chapman used very violent words, such as "bushranger," "coward," "villain," and "assassin;" but thinking it only fair he should make his reply, we printed the letter.

This brought upon us seven or eight communications condemning such language, and repeating the objections to the manner in which the building, as an interesting relic, had been treated. One of these, a short note, we printed, and with this we determined the matter should end. A letter from the owner of the structure, stating that the architect who, in his own name, had agreed with F.S.A. in condemning the treatment of the building, had been a competitor with Mr. Chapman for the commission, we did not think it necessary to print.

The original letter of F. S. A. had been published also in the *Gentleman's Magazine*; and in February last, when the whole matter had passed from our mind, Mr. Chapman wrote, reasserting his grievance; stating that the editor of that publication had inserted a retractation, and requesting us to do the same. Mr. Chapman said:—



> "I have now completed the works referred to in the letter inserted in the *Builder*, headed 'King Ina's Palace,' and signed F.S.A., and have converted the ruin into a family residence, according to the requirements of the owner. In doing so I have preserved as much of the old structure as it was possible to do with regard to the adaptation of the building to its present purpose, and where addition was necessary, the most striking features of the original work have been repeated so as to make the new portion harmonize, so far as was practicable, with the old part of the building. I feel very strongly the injustice of the condemnatory remarks of F.S.A. in the letter alluded to; and that they went not only beyond the limits of fair criticism, but beyond anything that the most prejudiced and hypercritical view of the case could warrant. The remarks in question are calculated to prejudice me greatly in my endeavours to obtain employment as an architect; and fortified as I am by the opinion of many disinterested persons qualified by their education and calling to pronounce a sound judgment on my work, I feel so great confidence that the instructions of my employer have been carried into effect in such a manner as to entitle me to public approval rather than to subject me to the lash of condemnatory criticism, that I do not hesitate to call upon the writer of the letter in question to reconsider his harsh verdict, and set me right, so far as it is in his power so to do, with the public."

As we had already allowed Mr. Chapman to reply in his own very strong words (which was not the case in the *Gentleman's Magazine*), and we could have scarcely refused insertion to the letters of objectors if we had reopened the matter, we declined to do so. Mr. Chapman, however, again presses his complaints, and we yield. We have communicated with F.S.A., and he assures us that he had no knowledge whatever of Mr. Chapman, and so far as he is aware, never saw him in his life. He therefore could not possibly have any ill-will against him, nor intend to do him any injury. The peculiarity of the house was not in the exterior, but in the circumstance that the internal arrangements were entirely unaltered. It was a house of the fifteenth century, but the fine hall, with its open timber roof, has been divided by a floor and partitions into small apartments. Mr. Chapman, however, appears only to have followed the instructions of his employer, and is therefore not to blame. F.S.A. acknowledges that Mr. Chapman's work, of which he has seen photographs of the exterior, does not render him liable to the terms of reprobation and censure used by F.S.A., but that Mr. Chapman has carried out the views of his employer with considerable skill and judgment, and F.S.A. is glad to have the opportunity of retracting the expressions in his first letter which have given pain and offence to Mr. Chapman, and to express his regret at having made use of the same under misapprehension of the facts—and without due reflection.

F.S.A. mentioned no names; was actuated by no feeling of enmity against any individual. He reprobated the making any change in a building which had become by mere lapse of time an important Historical Monument. He addressed himself to archæologists, and any archæologist in Europe he believes will agree with him.

We must state, in conclusion, for ourselves, that we have not the pleasure of knowing anything of Mr. Chapman, and have not written one single word on the subject of his work. The *Builder* has been uniformly conducted with so tender a regard for the feelings and reputation of others, as to draw upon us rather the imputation of over-kindness than the reproach of injurious severity. It is our duty, and we consider it a great duty, to strive to induce a feeling of reverence for ancient buildings, landmarks of history; and to protect for posterity these works of the past. In that spirit, conjoined with a spirit of fairness, we allowed both sides to speak in the present case. On the one hand, let us add, we have no desire whatever to injure Mr. Chapman.

* Vol. xxi., p. 713.

HOLY TRINITY CHURCH, LEE, KENT.—Mr. W. Swinden Barber, Architect.

We have not a shadow of personal feeling on the subject, and did not even know who was the person who had been employed when we inserted F.S.A.'s letter. On the other hand, if the ancient building in question has been ill-treated, no soft words or reticence on our part will prevent a continually-recurring complaint, with more or less of anger, by those who prize properly the architectural antiquities of the country.

HOLY TRINITY CHURCH, LEE, KENT.

This church, of which we give illustrations, consists of a nave, 83 feet by 34 feet; chancel, 27 feet deep, and the same width and height as the nave; north and south transepts (opening by two arches into the nave), 28 feet wide and 20 feet deep; a vestry on the south side of the chancel, and an organ chamber on the north.

A porch, 8 feet wide, is screened off the nave the whole width of the church at the west end. The height to plate of the nave and chancel roof is 27 feet 6 inches, and to the ridge 51 feet. The walls are built of Kentish rag with hassock lining, and squared Kentish rag grouts, with Bath stone strings and dressings to windows and doors. The roofs are of darkly-stained deal, having principals carried on semi-circular laminated ribs. Accommodation is provided for 600 persons on the ground floor and 150 in the west gallery, in open deal seats. The pulpit, which is of Caen stone, and circular on plan, is placed at the corner of the chancel and south transept. The disposition of the plan is such that all persons have a direct view of the pulpit. Two rows of stalls are placed on each side of the chancel. The reading-desk, which is on the north side, is of oak.

Sculpture is introduced into the tympanum of the west doorway. Six medallions ranged round a centre one represent the days of creation, with the Creator placed in the centre medallion. The sculpture is ably executed by Mr. Nicholls, of Lambeth. An oak-framed bell turret terminates the circular staircase to the west gallery. The lower portion is filled with stamped parquetting. The east and west windows are filled with stained glass, from the works of Mr. Wailes, at Newcastle. The church, parsonage, and site, are given to the newly assigned district of the Holy Trinity, Lee, by Mr. Lewis Glenton, of Blackheath, at a cost of nearly 10,000*l*. The works have been carried out under the superintendence of Mr. W. Swinden Barber, of Buckingham-street, Adelphi.

THE ROYAL INSURANCE COMPANY'S BUILDING, MONTREAL.

The progress which has been made in the practice of insurance within the last twenty years is very marked both in the extent of the aggregate business transacted, and also the scale on which the various insurance institutions is conducted. Twenty years ago each insurance company confined itself to a single office and establishment, and its customers throughout the country or abroad had only a local agent to assist them in effecting their policies and obtaining the requisite information. At the present day a certain number of insurance companies give their clients in the seven or eight chief cities of the kingdom the advantage of a local office, and frequently also of a local committee to look after their interests; and thus we find that the Royal Insurance Company has such establishments in Liverpool, Manchester, Birmingham, Bristol, Leeds, Sheffield, Newcastle, Southampton, Edinburgh, Glasgow, Dublin, &c.; and passing beyond the United Kingdom, we find in Montreal, in Canada, the pile of buildings belonging to this company, of which we give the annexed engraving.

In an article at the beginning of the year, on the architectural progress observable in Montreal,* we referred to this building; and, judging from the view that was given in the local journal to which we were referring, pointed out that the upper stage of the tower was not in good proportion. In the colony they naturally enough attach some importance to the criticisms of the mother country; and the architect of the building, Mr. J. W. Hopkins, fully admitting the justice of the remark as founded on the materials before us, forwarded a photograph to show that the tower of the building itself, now completed, is, as he modestly enough put it, "in somewhat better proportion than in the view" we had before us, which had been made early from insufficient materials. We willingly admit the correctness of the remark; and, in order to afford an example of what is going on in Montreal, we give a view of the building. The roof of the tower is covered with zinc, in fish-scale pattern, as previously mentioned, and a lower story will contain an illuminated clock and large bell.

The building stands on a wedge-shaped piece of land at the junction of two streets close to the river and the Albert Pier.

The subject of insurance (and particularly of life insurance) is necessarily so important to the community, that we feel no apology is needed for adding a few words here on the position of the company whose premises, far away, we have been alluding to. The Royal Insurance Company, moreover, has, from its magnitude, obtained such a position among the commercial establishments of the country, as to constitute it almost a national institution. This will be understood when we mention that its income is over half a million sterling per annum. The company transacts both fire and life business, and the extent to which it has prospered in both these branches of its operations is, we believe, unprecedented. It appears to have doubled its fire business with in the last six years; while, in life business, it issued, in 1862, new life policies to the amount of over 700,000*l*.

The success of the Royal Insurance Company

* See p. 6, *ante*.

THE ROYAL INSURANCE BUILDING, MONTREAL.—Mr. John W. Hopkins, Architect.

has, indeed, been so remarkable that we append a Table showing the salient features of its progress:

FIRE DEPARTMENT.

Year.	Premium.		
1858	£31,346.		
1862	76,925.	Increase in 4 years	£45,579
1866	151,733.	,, 8 ,, ...	120,387
1862 over	300,000.	,, 14 ,, ...	268,654

LIFE DEPARTMENT.

Year.	New Annual Assurances.		
1858	£18,763.		
1863	175,925.	Increase in 5 years .	291 per cent.
1868	387,752.	,, 10 ,, .	690 ,,
1862 over	700,000.	,, 14 ,, .	1,350 ,,

The causes of such success in a line of business where the field is already pretty fully occupied by rival companies are, we believe, not far to seek. The Company has always made itself conspicuous, not only for a prompt settlement of all claims fairly chargeable on its funds, but has also repeatedly signalized itself by acts of independent and novel consideration for the benefit of its policy-holders. As recently even as January last, on occasion of the explosion of the *Lotty Sleigh* at Liverpool, the Company paid all its insurants for the damage done to their property, although it was admitted that it was not legally liable. So marked was the liberality of this conduct, that a gentleman who happened to hold a few shares in the Royal, and it was more largely interested in another company, felt himself aggrieved, and ventured to apply to the Court of Chancery for an injunction prohibiting the payment of the losses in question, on the ground that the Company had no right to pay, as there was no legal liability. The Vice-Chancellor, on the contrary, decided that the directors were quite right in the view they had taken as to the discretionary power possessed by them to pay such losses, and he added that he could not doubt but that the course taken by the directors was likely to conduce to the welfare of the company.

With reference to the life business, we are told that the bonus hitherto distributed to the policy holders is a greater one than has ever been continuously divided by any company; and in fact, that the representatives of a person who insures in the Royal at the age of twenty-one would receive at his death all the previous payments in addition to the capital sum assured.

All this being true, as we have no doubt it is, the success of the Company is quite understandable.

SELF-CULTURE AND ADULT INSTRUCTION.

A lecture was recently delivered at the Drill Hall, Newbridge, by Sir Thomas Phillips, on "Self-culture and Adult Instruction." Mr. H. M. Kennard, of Cramlin Hall, presided. The Drill Hall was well filled by from 600 to 700 persons, including nearly all the principal families in the neighbourhood. The object of the lecture was to aid in raising the fund necessary to defray the cost of a new infant school at Cramlin, and of enlarging the existing building. The lecturer said he held self-culture and adult instruction to be among the most important branches or agencies of education; and in the course of his remarks he alluded to many self-made men, such as the Archbishop of York, whose life, he believed, began at the Sunday School, - the Lord Chancellor, who was the son of a medical man, and he himself had told him (the lecturer) that his father had sent him to college at sixteen, and assisted him for only keeping there one year, and after that period he had never given him a farthing, - Lord St Leonards, who was the son of a barber, and had held the great seal; - Sir Benjamin Brodie, who was educated, but in medicine raised himself above his fellows by great qualities; Sir Thomas Lawrence, who was the son of an innkeeper; Turner, who was the son of a barber; - Chantrey, the sculptor, who was apprenticed to a wood-carver; Hugh Miller, the geologist, who was a stone-mason, and the Dean of Westminster had said he would gravel he possessed to write in the style of Hugh Miller; - Arkwright, the father of the factory system; and Wedgwood, who had been extolled in connexion with ceramic manufacture by the Chancellor of the Exchequer. The men so named had sacrificed present enjoyment to produce future advantages, and in doing so formed their own characters—of industry, well-disciplined wills, independence, truthfulness, self-control, and self-respect. These were the qualities we should struggle to obtain, — these were the qualities which would make us respectable and useful.

DRAWING LECTURE ON ANIMATED NATURE.

Mr. Davidson, head-master of the Chester Government Schools of Science and Art, has delivered another lecture at the Handbridge Reading-room, illustrated by numerous sketches which he drew in presence of his hearers. The mayor of Chester presided.

Mr. Davidson, in commencing, said he had been asked originally to give a lecture; and, not anticipating being called on again, he had on that occasion taken "Man" as a subject,—man, the head of the whole creation; and now, in this lecture, he found that he must work backwards, in order to give an idea of animated nature in all its phases. He would not, however, descend from man; but would start from the lowest order of animal life, and gradually ascend in the scale until he should reach the point where the subject of the last lecture commenced. This he did in such a way as to excite repeated applause from a very attentive and delighted audience. His sketches, on black-boards and paper, included a multitude of objects, from the protozoa and porifera, or sponges, and corals, upwards, through insects and reptiles, to birds and mammalia; for the last of which, however, there was no time left, after a two hours' lecture, to do much justice; so that Mr. Davidson may very likely be called upon for a third lecture of the same entertaining and instructive as well as novel description.

THE EFFIGY OF SHAKSPEARE IN STRATFORD-ON-AVON CHURCH.

The attention of not only men of our own country, but of many from foreign lands, is being directed to Stratford-on-Avon, and to every relic of Shakspeare which exists. The spot in which the ashes of the poet rest will to thousands be an especial attraction; and in connexion with the monument of the poet, many will regret the covering of white paint which no doubt was given in the best feeling by Mr. Malone, who, however worthy of praise as a painstaking historian and critic, certainly erred in this instance in a matter of taste. In Mr. Malone's time, however, we were a whitewashing generation, who smeared everything, particularly in ecclesiastical edifices; and, in consequence, many figures, which we believe to have been faithful transcripts of nature, have lost that charm and means of identity which colour gives to portraiture. We can still look with pleasure at the marvellous intellectual development of the head of Shakspeare as we see it in the chancel of Stratford Church; but many will regret the absence of the colour of the eyes, countenance, and hair, which originally, we have little doubt, presented the appearance which must have been familiar to the chief part of the inhabitants of Stratford-on-Avon at the time when the monument was erected: this was between six and seven years after Shakspeare's death, when his near relatives and many friends would be critical about the correctness of the resemblance. In accounts of this effigy, it is distinctly stated that the eyes were of a light hazel, the hair and beard auburn: the dress consisted of a scarlet doublet, over which was a loose black gown without sleeves. The lower part of the cushion was of a scarlet colour, with green on the top, and gilt tassels.

In 1748 the monument was repaired, at the instance of a traveling company of players, who raised money for this purpose by performing the play of Othello. In this repair the colours originally bestowed on the effigies were restored by a painter of the town: but in 1793 came the white paint. A very careful removal of this would probably confirm the accounts we have of the tints, and then an artist of first-rate ability should be requested to attend to the repainting of the figure. The present would be a fitting time to do it.

Some years since, when the monument of Gower, the poet, in St. Saviour's Church, was restored, we believe the late Mr. Pitt, the Royal Academician, undertook the direction of the colouring; and certainly, when it was completed, the effect was very good and harmonious. The figure of Watts, in Rochester Cathedral, and several others to which we could refer, have been treated in the same way with very good effect; and we see no reason why a similar course should not be followed at Stratford-on-Avon.

The state of Anne Hathaway's cottage is not satisfactory: the upper floor is in a very shaky state. It is, of course, desirable not to interfere with the picturesque appearance of the place; but at the festival people will flock there in crowds, and care should be taken to prevent too many persons from being in the upper rooms at the same time. When last there we noticed that the carved bedstead which is said to have been in the house in Anne Hathaway's days, and which is certainly a very good example of the better kind of domestic furniture of the period, was in a neglected condition, it being necessary to prevent the bedstead from falling to pieces by fastening it with ropes. There has been a good deal of damage done to this cottage even within the last few years. The father of the person who now resides here, and who claims to be descended from the father and mother of Shakspeare's wife, sold the old-fashioned pewter dishes, we are told, at the price of old metal, for the purpose of being *melted down*. And it may be noticed that parts of the original wainscoting have been removed, and probably sold to unscrupulous relic-seekers. Effectual steps should be taken for the preservation of the cottage. It would seem to be a pity, while exertions are being made to erect a fresh monument to the memory of Shakspeare on the 300th anniversary of his birth, to neglect those time-honoured relics which were associated with him during his life-time.

CATHEDRAL RESTORATIONS.

Important meetings, to promote the restoration of the Cathedrals at Salisbury and Worcester, have been held.

At the Salisbury meeting, the Marquis of Ailesbury presided. The Dean said, the sum which the Dean and Chapter had obtained from the Ecclesiastical Commissioners, as part of the consideration paid to them in exchange for the capitular property, was 10,000*l.*, but this would barely suffice to execute in a satisfactory manner the works which were already in progress. The tower and other portions of the work were still unprovided for, and the Dean and Chapter had consequently resolved on an appeal to the diocese and the public. The total estimated cost of the undertaking was between 35,000*l.* and 40,000*l.*, in addition to the 10,000*l.* already being expended. The Dean and Chapter were only able at present to set apart 500*l.* a year for the fabric, and this sum was not likely to be greatly enlarged for thirty or thirty-five years. The Bishop of Salisbury proposed the first resolution:— "That the condition of the Cathedral, as described in the statement of the Dean, renders it necessary that steps should be immediately taken with a view to its complete repair and restoration." Mr. Sotheron Estcourt, in seconding the resolution, said he thought the work ought to be taken up in every parish throughout the diocese, and he felt persuaded, if this were done, not only 30,000*l.* or 40,000*l.*, but 80,000*l.* or 100,000*l.* would be raised, if required. A committee was appointed to carry out the objects of the meeting, and 6,000*l.* were promised in the room.

At the Worcester meeting, Lord Lyttelton, who presided, referred to what had already been accomplished, and said the money spent came from the hands of the Dean and Chapter, from the Ecclesiastical Commissioners, and from the private resources of the Chapter. The sum so spent was considerably more than 30,000*l.* What remained to be done was, — Externally, the north west and south sides and the nave, the north porch and the west windows, and the cloisters (which were now in a very bad condition); estimated expense, 8,240*l.* Internally, the floor of the nave, 1,000*l.*; heating and lighting, 2,000*l.*; re-modelling the choir, a new organ screen, the aisles right and left, the reredos, the floor, and fittings, 10,720*l.*; total, 28,960*l.* He was allowed to announce that the Dean intended to add considerably to the sum which he and his brother had already expended, by giving 1,000*l.* to be applied to the restoration of the reredos. Another member of the Chapter — his hon. and rev. friend Mr. Fortescue — had undertaken the solid repair of the western wall. Other members of the Chapter intended to add contributions from their private resources, and there was reason to suppose the Ecclesiastical Commissioners would give as much as the private members of the Chapter—that was 2,000*l.* It was proposed that the time for paying the subscriptions should be over three years at least. In the diocese of Hereford the sum raised for the restoration of the Cathedral was 42,000*l.*; but that amount was spread over a period of

between ten and twenty years. In Yorkshire a long time was taken in rebuilding York Minster Abbey and in restoring Doncaster Church. Lord Dudley had promised 2,000*l.*, and the Mayor of Worcester had given 200*l.*—Resolutions for carrying out the objects of the meeting were adopted.

THE ARCHITECTURAL ASSOCIATION.

The ordinary meeting of members was held at the House, in Conduit-street, on Friday, the 1st instant.

Mr. T. Roger Smith, the president, occupied the chair.

Mr. William Emerson and Mr. R. C. Batterbie, were on ballot elected members of the Association.

After the usual business had been disposed of, Mr. T. Hayter Lewis, preliminary to reading his paper on "French Architecture down to the Renaissance," directed attention to a collection of drawings illustrative of the subject on which he proposed to dwell, and which he said had been lent to him by Mr. Gilbert Scott. The drawings in question were those which Mr. Scott had used in 1858 for his lecture at the Royal Academy. In directing the notice of the meeting to these drawings, Mr. Lewis observed that Mr. Scott had placed them at the service of the Association in the most handsome manner.

Mr. Lewis then proceeded to read his paper, which will be found in another place.

At the conclusion,

Mr. Blashill and Mr. Bain commented upon the general accuracy of the observations made by Mr. Lewis, so far as their personal experience of French cathedral churches went. The former gentleman inquired whether Mr. Lewis could throw any light upon the circumstance that the ball-flower decoration was found in France as early as the twelfth century, while in England it was not to be traced in earlier than fourteenth century buildings.

Mr. Lewis said he was at a loss to account for the circumstance.

Mr. Bain inquired what was the date to which Mr. Lewis imputed the porch at Avignon.

Mr. Lewis observed that, in his opinion, the date was either the sixth or seventh century, and that he considered the porch built up of earlier materials.

Mr. Bain thought that the details looked Classical.

The Chairman observed that the able paper which Mr. Lewis had furnished was valuable as showing how much knowledge could be acquired upon a given subject, and how desirable it was to possess that knowledge. It might, it was true, be possible to put up showy buildings without this knowledge, but it was impossible not to detect in them the results of that ignorance which formed the stock in trade of their authors. If, therefore, a student of architecture wished to carry out works alike creditable to his own reputation and to the age in which he lived, he would supply himself with the largest and most varied stock of information which could be obtained in reference to the buildings of past ages. The study of the Renaissance had already affected, to a considerable extent, our own works. Except in the case of brick buildings, we were departing from our own types, and adopting simplicity of mouldings, single shafts, and the peculiar style of carving exhibited in French works. He himself was more familiar with the architecture of the south of France; and he was persuaded, from a careful examination of it, that it would be necessary to adapt it in order to meet the economical requirements of the age. If, for instance, those who were commissioned to build small country churches would take as their model the little Romanesque churches of the Pyrenees, the result would be most satisfactory. Here were to be found churches almost entirely without mouldings or carvings, and yet they struck the eye at once as graceful works of art, owing to their delicate proportions and the skilful manner in which the light was admitted. The hemispherical vault and the semicircular arch also showed what could be done in the way of effect with but slight materials and at small cost. While upon the subject of French churches, he thought it but right to allude to the ready assistance which the ecclesiastics attached to those buildings appeared ever willing to extend to the student of architecture. For his own part, he could say that he had always been treated with a courtesy and consideration by the French clergy which left a recollection he felt it a pleasure to acknowledge.

After a short discussion, a vote of thanks was unanimously accorded to Mr. Lewis for his paper.

COMPETITIONS.

Stratford Presbyterian Church.—In response to the advertisement of the committee of managers "for plans and specifications for a church and schools at Maryland Point," designs were received from eight architects, some of whom submitted several. After considering the various sets of drawings, the committee unanimously selected the design of Mr. Alexander Peebles, architect. The style is Early English, treated freely.

The Proposed New Buildings for the Leeds Mechanics' Institution.—Some time ago a design by Mr. Brodrick was recommended by the committee for adoption; but we understand that the tenders for carrying it out being in excess of the proposed expenditure, it had to be abandoned. The architects who had previously competed were invited to again submit their drawings and plans, and the choice has now fallen upon those sent by Mr. Crosland, architect, Leeds. The new building will be in the English Domestic Gothic style.

The Hawks Memorial on the Windmill Hills, Gateshead.—Eight designs have been sent to the committee, and are now on view in the town-hall.

Corn Exchange, St. Ives, Hunts.—At a meeting of the directors of the above company, held last week, from the plans which had been sent in a limited competition, those of Mr. R. Hutchinson, of Huntingdon, have been selected, and he received instructions to carry out the design.

GUILDHALL, LONDON.

We understand that there is a prospect of the new roof being forthwith proceeded with. Mr. Myers has entered into a contract, and has commenced the scaffolding. Our readers will recollect that the visit of the Prince and Princess of Wales interrupted his work, which had been begun. For that visit, besides the additions and decorations, a temporary series of trusses were placed under the ceiling, and invited comparisons. The anxiety of the Corporation to do full justice to their ancient hall, which has been so long disfigured by the miserable and unsuitable ceiling, is exhibited in the care taken to ascertain the kind of roof which will be most appropriate. In order to obtain this object if possible, the Council have, we understand, called in Mr. Wyatt and Mr. E. Roberts to confer with the City Architect and advise the Corporation on the whole subject, before they irrevocably commit themselves to the designs submitted by the late City Architect, which can, of course, no longer receive the exact interpretation of the author.

SANITARY PROGRESS IN ST. PANCRAS.

It is always a far greater pleasure, when it can be done with justice, to use words of commendation than of condemnation. We are therefore glad to notice some steps in the right direction which have been taken in this large and populous parish. Amongst them may be mentioned extra care in the licensing and inspection of cow sheds and other places, in which the unwholesome London milk is produced. The unhealthiness of these places is beginning to be better understood; and ere long none except those who have interested motives will advocate the continuance of such fever-spots in the midst of dense populations.

The Sanitary Board of St. Pancras have also directed their attention to the inspection of stables and mews, which are to be found extensively planted in many parts of this district. In former numbers of the *Builder* reference has been made to the danger of these places to health, particularly where rooms above the stables are occupied by families. We have even given illustrations of bedrooms situate over a stable, in which three or four children died within a very short time of each other from diphtheria. Now, however, the horse-refuse has to be removed from the premises at short and stated intervals, and the greatest attention has to be paid to them in other respects. Such measures, it is to be hoped, will be vigorously carried out, not only in St. Pancras, but in other metropolitan districts; for there is more evil arising from the present arrangement of those places than is generally supposed.

THE PROPOSED MUSEUM, SOUTH KENSINGTON.

The designs that have been submitted in competition, in reply to public advertisements, for the new Museum buildings proposed to be erected on the site of the International Exhibition, South Kensington, are now hung up in the Royal Gallery, near the House of Lords. They will be shown to the public on (this) Saturday. As it is a subject not to be treated hurryingly, we reserve our review.

MANSFIELD, NOTTINGHAMSHIRE.

A new Wesleyan chapel is about to be erected in Bridge-street, Mansfield, upon the site of the present one, which is too small for the requirements of the congregation. The building will be of a plain and substantial character, built of the stone plentiful in the neighbourhood. Mr. J. S. Norris, of Nottingham, is the architect. The erection of it is intrusted to Messrs. Lamb & Stevenson, of the Mediæval Woodworks, Nottingham. Some interesting old property will have to be demolished to clear the site which is at present occupied with the old chapel built in 1812, and the two wings of an ancient family residence of the Chesterfield family. The façade of the old mansion was taken down in 1812, and the present chapel was built in between the two wings occupying the façade and a portion of the quadrangle in the rear.

It was here that the Right Honourable Philip Dormer Stanhope, Earl of Chesterfield, statesman, and author of the well-known "Letters," resided, of whom Dr. Warren (when hearing him pronounce his last words, "Give Dayrolles a chair,") so justly said, "His good breeding only quits him with life." The unfortunate Dr. Dodd, who was engaged as pupil to his son, Philip Stanhope, Esq., had apartments and a study here, which are still to be seen,—the latter with little or no change.

The work of demolition was commenced on Monday. The new chapel is to be completed by December next.

ECCLESIOLOGICAL SOCIETY.

A Committee-meeting was held on Saturday, March 19th, when various matters were brought forward. A letter was read from the Rev. C. T. Weatherley, curate of Old St. Pancras, calling attention to the proposed occupation of that churchyard, and demolition of the church itself, by a railway company.

The committee was informed that the proposed restoration of St. Bartholomew's, Smithfield, is to be set in hand forthwith. It appears that a general meeting of the subscribers, held on the 17th of March, authorized the immediate commencement of the works. Among those to be begun in the first instance are the removal, as far as practicable, of the soil (accumulated to the depth of several feet) around the exterior of the wall; the lowering of the pavement to the original floor-level, some 3 feet below the present,—a process which will uncover the pier-bases hidden for centuries, and exhibit the piers anew in the proportions designed by Rahere; the cleansing and repair of the ashlar masonry and mouldings; the putting back the partitions in the transept arches (the transepts themselves having been destroyed), so as to display these handsome transitional arches *within* the church; the removal of misplaced monuments to less objectionable situations; and the rearranging and improving the fittings. Letters were read from the Vicar of Bosham, Sussex, explaining the progress of the restoration of that interesting church, and making an earnest appeal for further contributions towards the completion of the work. Mr. Mitchell also submitted a coloured cartoon for a proposed painting, representing the labourers in the vineyard, for the chancel arch, by an amateur. Upon this the committee adopted the following resolution:—

"The design proposed to be painted over the chancel-arch of Bosham church would be more appropriate if the style were more in harmony with the architecture that it is intended to decorate. It is most necessary to design a wall-painting that is limited by the architectural lines of the building in such a manner as to maintain as much as possible the effect of 'flatness,' in order that it may be a real wall-painting as distinguished from a picture. The effects of atmospheric perspective make the wall appear concave, and all architectural effect around it is at once destroyed, and the purposes of arches and other matters of construction are stultified. It is possible, without any return to what appears ugly to modern

eyes in Mediæval art, to design a perfect wall-painting in harmony with various styles of architecture."

The committee examined Mr. St. Aubyn's designs for the new church of St. Mark, New Brompton, in the parish of Gillingham, Kent. Mr. Poole laid before the committee, from Signor Salviati, some specimens of mosaic. Drawings for the restoration of the reredos (involving the removal of the solid altar) in Westminster Abbey, and for a new sanctuary pavement intended to harmonize with the ancient specimen of the Opus Alexandrinum in the choir, were exhibited.

DUBLIN.

Of late, many and varied have been the improvement projects set afloat by those who aim at the beautification of the Irish metropolis. It is to be feared, however, that the want of funds will in each case throw an early damper on their efforts.

Of these contemplated changes, the most important concerns St. Stephen's-green. This now forms the subject of a petition to Parliament, the object of which is to have the square tastefully arranged, and thrown open to the public. It is proposed to lay it out in ornamental plantations and walks, embellished with sculpture, fountains, and not improbably covered arcades, protecting mural decorations, chiefly the work of native artists. The idea deserves all the success that we can wish it. A design for the proposed improvement, prepared by the railway engineer, Mr. G. W. Hemans, is on view in various parts of the city of Dublin.

A proposition has been made in connexion with the intended Albert memorial, to improve the space immediately in front of the entrance building to the Dublin University, by removing the present unsightly railing, and giving a small portion of the ground—at present the property of the university—to the street, separated from it by an ornamental balustrade, as a commodious footway, an arrangement that would greatly facilitate communication between the main business streets of the city.

After a determined struggle between two parties of the corporation, it is proposed to erect the Albert memorial in the open space, outside and facing the Bank of Ireland, and the front of the university, the most central point of the city, traditionally called "College-green." It was to this site that Lord Carlisle referred when, at the inauguration of the Goldsmith statue, he said,—

"I trust that no long time will elapse before, on this very spot, where the historic recollections, the architectural beauties, the main thoroughfares, and the pulses of Dublin life, most crowd, the passer-by, as he halts for a moment, may look up, not without patriotic pride and emotion, to the statues of Goldsmith and Burke."

The proposed Albert monument consists of a group of sculpture, combined with a subordinate display of architecture, with what success will be anxiously looked for. It is entrusted entirely to Mr. Foley, whose statue of Goldsmith already adorns the entrance to the college at one side. At the other, a vacant pedestal—not nameless—awaits a statue of another illustrious son, probably from the studio of the same artist.

Many other improvements of a like kind are suggested for this neighbourhood.

CRANNOGES, OR LAKE DWELLINGS IN IRELAND.

It appears that Mr. Kinahan has discovered, far below the present level of Lake Loughrea, proofs of the existence of human habitations, and other lakes have long been spoken of as "enveloping with their waters the 'round towers of former days,' which the fisherman, while strolling of an evening along the banks, beholds in 'the waves beneath him shining.'" It is a curious circumstance, we may note, that the lake-dwellings of Switzerland and other countries were inhabited by dwarfs; that Irish legends people the lakes with "little folks," whom they called fairies; and that, from what little is known of the ancient Druids, "sacred lakes" were a marked institution in their doctrinal practices. Are not Venice and Mexico vestiges of such ancient cities? Even London may have once stood, not merely on marshy land, as we know, but on ground quite covered with water. The old name of Loughrea is said to have been Baille Riogh, or the City of the Kings; and Baille seems to indicate a close connexion with those ancient forms of religion in which the god Bel, or Baal, was worshipped, and which prevailed both in Ireland and Scotland, as the many places whose names still begin with the syllable Bal, or Bel, go to show—witness Balmoral itself. The crannoges discovered by Mr. Kinahan consist of circles and rows of oak piles, and regularly placed flat stones. Many bones of edible animals, and of large dogs, were long since found, besides bronze and brass ornaments and implements; and, what is very notable, as tending to show how lately such crannoges may have been used as human dwellings, even a brass crozier, inlaid with silver, a battle-axe, a gun-barrel, and a hammered iron vessel. Dwellings would appear to have stood round a common fire in these crannoges.

THE DRAINAGE WORKS IN BETHNAL GREEN.

The manner in which certain sewers are being built in this parish, contrary to the provisions of specification and contract, is now the subject of grave comment. At a recent meeting of the vestry, as reported in the *Bethnal Green Times*, it was asserted that the sewer, described to be 9 inches thick, and so certified by the parish surveyor, was in parts only 4½ inches thick. Mr. Ford, the recently appointed Inspector of Nuisances, reports that "The works are being carried out in the worst manner possible." When told he could refer what was unsatisfactory to the surveyor, Mr. Ford said,—he had frequently called Mr. Bainbridge's attention to matters that he (Mr. Ford) considered bad; but the surveyor said it was all right, and, as such, if Mr. Bainbridge's decision was to be final, he respectfully declined any longer to hold the office they honoured him with.

THE PROPOSED DECORATION OF SAINT PAUL'S CATHEDRAL.

As, from the attention which my letter in your pages has attracted, the subject of it seems to be one of much interest, I hope I may be allowed to notice some of the remarks that have been made on it.

It is true, as you state in a foot-note, that this letter was intended to be a reply to statements made in more quarters than one. It is also true, that when I wrote it I had in view an article in the *Illustrated London News* of the 20th Feb. last, p. 194, to which your correspondent "T. J. G." refers. But he has omitted to state that, within three or four days after the appearance of that article, the substance of my remarks was sent to the journal in question, in which, therefore, it *might* have appeared, and neither of us would have had occasion to trouble you.

Without further noticing your correspondent's attempts to explain away the obvious meaning of the article in question, the value of which any one can estimate who will refer to them, allow me to bring him and your readers back to the main point in controversy between us.

The whole gist of his attack on the St. Paul's committee consists in this, that, with reference to the only mosaic ordered, the committee had permitted a foreign artist to compete with some English ones, and had decided in favour of the foreign design; and that, in regard to the painted windows ordered, they had commissioned foreign artists to design and execute them. Your correspondent, thereupon, undertook to lecture the committee on the impropriety of their conduct, and to warn them of the consequences of persisting in it. * * *

I ask, what is the principle on which the foreign artist and his works are to be excluded from England? If there be any such principle, it must, *à fortiori*, be more applicable to the former than to the latter. Yet no such exclusion as this has ever been proposed, nor has the exclusion of either artist or works ever obtained in practice; neither has the admission of one or the other proved injurious to the progress of English art. There is scarcely a department in art or science, in painting, sculpture, architecture, music, or literature, in which, from the earliest times, foreigners have not been largely employed in England; scarcely one in which the practice has not operated beneficially. The reason why it should do so, and the kind of influence it exercises, are so obvious, that it is needless to point them out. I may remark, in passing, that it was by the liberal employment of foreigners by the late King of Bavaria that the school of artists was formed whose works have given Munich a world-wide celebrity.

I must really express my obligations to your correspondent for taking the trouble to inform me of the existence of frescoes at Westminster, Lincoln's Inn, and elsewhere. I was, however, already acquainted with them; and I had also heard the remark of a gentleman quite as well qualified to express an opinion on the subject as your correspondent can suppose himself to be, that it is much to be regretted that, generally speaking, the artists engaged at Westminster have been unable to emancipate themselves from the habit formed by *genre* painting; and that their works constitute at most a class which may be termed *genre historique*, and fail to obtain the dignity and simplicity of the monumental works we see abroad. If this be correct, it would seem that the employment of a foreign artist or two at Westminster might have exercised a beneficial influence on English art.

It would be impertinent in me to attempt to vindicate a reputation so well established as Professor Schnorr's; and hardly respectful, I think, to the committee, to treat as worthy of serious notice the application to any of their proceedings of such an expression as a "hole-and-corner competition."

With respect to the glass paintings ordered, it is unnecessary for me to say more than that I adhere to every syllable of what I have already stated, and which seems, in all the essential parts of it, to be admitted; for it appears to be confessed—as, indeed, it could not be denied—that glass paintings equal to the German are not to be obtained in England.

I have but few remarks to make on the communication of your correspondent "H. J." I know nothing whatever of the progress of the subscription list; nor had my letter any reference to it. My reasons for writing it I have already given.

As to his objection of needless haste in procuring the execution of the windows, it may be sufficient to say, in addition to the futility of waiting for the "coming man," that, if I am rightly informed, the donors of the windows are advanced in years, and it would be unreasonable to defer the works to a period when they may never witness the result of their liberality.

With regard to his comparison of the Glasgow windows with the great windows of the Renaissance; as an indefinite time must elapse before glass coloured like that of the Renaissance, and having a texture similar to it, is manufactured, I think it premature to discuss the question whether our glass painters are likely ever to rival the Renaissance. They, indeed, will have made a great stride if they succeed in becoming no more inferior to it than the German glass painters are at present. B.

ON THE SO-CALLED "SURE CURES" FOR SMOKY CHIMNEYS.

In an article headed "Murmurs from the Seaside," a correspondent of yours describes some chimney-pots seen at St. Leonard's, which are designed to prevent the nuisance of smoke within the house during windy weather; and although I have not seen these chimney-pots, I am quite sure from the description of them that they do answer the purpose for which they are intended, because I know from experience that the principle on which they are made is a right one. But his description of the way they are intended to act is scarcely correct, for although in gusty weather the smoke does find its way out of tubes placed on chimney-pots as he describes them to be, they are intended to create a protected upward current of air, to assist in carrying off the smoke, and in this way would act better in a moderately high wind than they would in calm weather.

Your correspondent goes on to say, "that in addition to their alleged merit of curing smoky chimneys, they possess the great recommendation of being pleasing to the eye;" and I think it ought generally to be known that the terminations of all chimneys need not be otherwise: they should be made to conform to the style of architecture of the buildings to which they belong; and this is the more necessary, seeing that chimney-stalks are indispensable, if the nuisance of smoke is to be avoided.

Sufficient attention is not paid either to designing or constructing chimneys, or we should not see the various forms of ugliness which so often disfigure new buildings soon after they are occupied. Important principles are involved both in their design and construction, which

equire to be observed, and if this be properly ttended to, all unsightly additions to chimneys fter the building is finished may be avoided; at if these principles are violated, the alterations necessary to remedy the defect are not nly unsightly, but very expensive.

And, while on the subject of chimneys to uildings of recent construction, I may as well ention that, during the erection of the new ew Library, adjoining the Temple Gardens, nd when passing along the river in company ith the late Mr. John Billing at the time the himney-stalks were being finished, we each remarked the error made in their situation, and ame to the conclusion at the time that an lteration would have to be made in them. I ittle thought that the extreme measure of arrying the flues by metal tubes on the roof up o the ridge would have been adopted, which as ruined the external appearance of the uilding, and must be a source of great annoyance and vexation to the architect.

I do not wish my remarks to appear harsh; ut I am quite warranted in saying that mistakes such as the one above mentioned ought not now to be made; and it is a reflection on the ficience of the age that they should occur so frequently as they do.

I will now turn from the consideration of himneys on buildings of recent construction to hose which were erected before the science of architecture had made such rapid strides; and, having had under my notice upwards of 2,000 such chimneys, with every variety of those defects which cause a smoky house, and, as I am not a patentee, nor interested in any patented contrivance, nor, in fact, have any crotchet in my head for the so-called "sure cure" of smoky himneys, I may possibly be able to give some useful hints on the subject.

Undoubtedly one of the principal causes of a smoky house is the want of a sufficient protection to the tops of chimneys, which should be constructed in such a way as to assist the smoke in escaping from the flue, and, at the same time, prevent it, as much as possible, from returning down the adjoining one. Another cause is from chimney-stalks not being carried well above the roof of the house. These have, no doubt, led to the innumerable inventions in zinc and iron which disfigure houses in this country and on the Continent. Many of these contrivances display considerable ingenuity, but it is rarely united with the necessary facility of being readily cleaned by the sweep's machine. Now, except in situations where it is impossible to raise the chimney-stalks by any other means, all metal tubes may be entirely dispensed with, and a permanent architectural termination substituted, formed with brick, stone, or terra-cotta, or a combination of the three, at much less cost than metal, which is not only more expensive, but soon decays.

Another great source of failure is in carrying flues of attached buildings in a double line in the chimney stalk. They should in all cases be built in a single line; for, unless this be done, it is almost impossible to make each flue perfect in itself, and prevent the smoke from one flue passing down that of the next house, which is as much to be guarded against as a so-called smoky chimney, or much vexation and annoyance will be the result. As a general rule, the attic rooms of all houses, and rooms in buildings of only two stories, are more liable to the nuisance of smoke than the lower rooms in buildings of greater height; and the tops of their chimneys require more protection from the effects of high winds. One reason is, that as smoke, by its nature, will bear a considerable amount of compression; therefore, the longer the column the greater amount of resistance it will bear without escaping into the room; for, if the upward current in each flue be equally good, smoke gains greater force in the larger column than it does in the short.

Amongst the most difficult flues to make act properly, are those of attic rooms having their chimneys in external walls: indeed, all flues in external walls do not draw so well as those in internal walls, for they assist each other by their warmth, while the flues in external walls cool rapidly, particularly when the wind is blowing strongly against them. Wherever practicable, flues should always be carried up in internal walls; but, where it is absolutely necessary for a flue to be placed in an external wall, the brickwork between the flue and the outward air, should not be less than 9 inches thick.

It would be impossible, in the limits of an article, and without the aid of diagrams, to explain all the minor faults which frequently cause a smoky house. They are more numerous than many persons would imagine; but they prove incontestably the fallacy of those who propose with one description of chimney-pot, or one special appliance to cure all smoky chimneys. It is very much like endeavouring to cure with one kind of medicine all diseases to which mankind is liable.

It requires a facility for observation, and an amount of experience which is seldom obtained by one person, to be able to decide readily as to the causes of failure in many apparently well-designed and well-constructed chimneys.

T. H. Adamson.

ARCHITECTS AND THE ROYAL ENGINEERS.

Sir,—I trust that you will not cease to call attention to the disgraceful placard offering 2*l.* bounty to architects if they will become Royal Engineer private soldiers. I, to-day, saw the offensive offer hanging in a frame on the wall at the front of the Horse Guards. Z. Z.

Sir, The counterpart of the placard described in the *Builder*, p. 238, may be seen on a board stuck up adjoining the carriage entrance to the South Kensington Museum, in the Cromwell-road, where the *military tradesmen*, formerly called Sappers and Miners, but now, *specialis gratia*, "Royal Engineers," have a sort of guard-house or porter's lodge (*cui bono*, seeing the ordinary police are close at hand).

In the list of "men of other *trades*," the names are placed in parallel columns in the placard. Column No. 2 (I think), in military parlance, No. 2 Company! contains,—architects, engineers, collar-makers, &c.

The "engineers," who follow the "architects" in the trades list, may be supposed to be *civil*, as contradistinguished from the gentlemen constituting the corps formerly called Army Works Corps, afterwards Sappers and Miners, but now "*Royal Engineers*." ?

CULPABLE CREATION OF FEVER.

Fever often brings death in its train in the mansions of the rich as well as in the hovels of the poor. It behoves every one to look around and see if the causes of these evils may be prevented. A recent case brought under my notice induces me to offer it as an illustration and a warning. A lady has taken a house in Kensington Garden Square, Bayswater. She finds, almost immediately after taking possession, that the health of every member of the family is more or less affected, and at length one little child is stricken with gastric fever. The doctor at once traced the evil to its source in a foul smell pervading the house, particularly in one of the principal bed-rooms. As soon as I was called in I concluded that the cause would probably exist in an untrapped waste-pipe. On examination, I found behind the pipe casing which concealed the waste-pipe of a bath-room, the origin of the evil, caused by the most culpable negligence of the builder. A soil-pipe, properly formed of lead, was brought up to the level of the water-closet, but above this a common iron rain-water pipe was introduced without tight joints. The effluvium from the drains thus found its way through a hole made in the wall for a gas-pipe, under the floor of the room I have mentioned, and thus in the most insidious manner is the poison introduced. The man who performs his work so as to create such mischief is surely chargeable for his neglect; and what if death should ensue on fever?

A. J. Baker.

THE WISE AND UNWISE USE OF BUILDING MATERIALS.

I have read the remarks of "A Traveller" on the above, in your paper of the 2nd instant, and much wish for further information as to the use of gravel, &c. with lime, and also as to the cob-walls.

If any of your readers will furnish the above it will be esteemed as a great favour. J. G.

Milton Abbey Church, Blandford, Dorset.—I trouble you with a line upon the letter signed "Traveller," to say I am quite of his opinion, and to inform him and others who take an interest in seeing old churches restored to their original intention, that this one is under restoration, and that it is built externally of flints and stone; and in knocking off the plaster on the inside (put there by Messrs. Conceit and Pocket) we find the same material; the flints square-headed, some of it very excellent work, and fair with the ashlaring and jambs of windows, doorway, &c., which shows it was never intended to be plastered.

The groining of choir, south and north aisle, also the transepts, is of chalk, with Ham Hill stone ribs, most part of which has been restored to its original face, and looks remarkably new. This is a chalk and flint country, which carries out the truth of "Traveller's" statement, that the old ones used to build with the local material. This church is of the thirteenth century. Mr. Scott, R.A., is Architect; and Baron Hambro the owner, who is at the sole expense of restoring.

J. Y.

NEWS FROM SCOTLAND.

Edinburgh.—The architectural improvement of Princes-street has been progressing for a good many years, but until recently the west end had scarcely partaken of those changes which have been going on in other parts of its long line of shops and houses. Within the last few months, however, a new building from the designs of Messrs. Peddie & Kinnear, architects, has been erected in the division between Castle-street and Charlotte-street, which, although occupying only the limited frontage of an ordinary dwelling-house, has importance and character from its general design and details. It consists of five stories from the level of the street—the uppermost one being in the high-pitched French roof. The street floor is devoted to a shop, with spacious saloon behind, and has in front the inevitable large plate-glass windows, which are usually so destructive to architectural effect. In the present case, however, a somewhat better treatment than usual has been adopted, and by carrying up at each corner a broad and strong-looking pier, between which the shop openings and the door to the house above are equally spaced out, the effect is that of an arcade standing out in front of the base of the main building, which has its own independent and sufficient supports behind. A light cornice, carried on double trusses at the ends, surmounts this arcade, upon which, forming a projecting balcony to the first-floor windows, is to be a light iron railing in ornamental panels between stone pedestals. These pedestals are to be finished with carved stone vases, in which, during summer, flowering plants may be placed. The three windows of the first floor, and also those of the second floor, are placed between three-quarter columns, with capitals of a Corinthian character, from which spring semicircular archivolt mouldings. The height from the street to the flat roof is 73 feet, and the view from it and the upper story commands the whole of Princes-street. The internal finishings, which are now being proceeded with, are in keeping with the style of the exterior. The second floor has been arranged for a house or chambers, and the two upper floors have been already let on lease for a dwelling-house. Besides the building in Princes-street, an extensive block has been erected in connexion with it in the Mews Lane. The whole building is being rapidly finished, and will be ready for occupation at Whitsunday. Mr. John Rhind, sculptor, executed medallion heads of Sir Walter Scott, Sir David Wilkie, Adam Smith, and James Watt—standing for Scottish literature, art, philosophy, and science,—with which the cornices are ornamented. The contractors for the various works are Messrs. William Beattie & Son, mason and wright work; Mr. T. Graham, slater; Mr. Kemp, plumber; Mr. John Steel, Princes-street, gas-fitting and bell-hanging; Mr. Steel, Glasgow, plaster work; and Mr. David Horn, clerk of works.——There has been a preliminary meeting of persons favourable to the establishment in Edinburgh of a workmen's club or institute similar in its arrangements to those now so popular in London and the principal English towns. A lady in Edinburgh offers 50*l.* towards the object. A public meeting was to be held for the purpose of laying the matter more fully before the working classes of the city.

Dundee.—The harbour works are now being proceeded with. The piling of the new coffer-dam has just been completed. The earth is being rapidly cleared away from the foundations of the rent wall of the lock. At the fallen east wall, about 100 feet of the foundations have been

removed, as well as the masonry of the old common sewer. The new wall has been founded without the old wall. Workmen are also employed throwing down the bulged north wall. The new wall is to be several feet within the old wall, to give a greater extent of quay accommodation. In the course of the present operations, it was discovered that the outlet from the old common sewer, which was stopped up after it burst, was leaking, and two pits were sunk in the centre of the triangular piece of ground to the east of the lock, for the purpose of having it stopped, by filling the sewer with masonry. ——Three large organs have been ordered of Messrs. Forster & Andrews, of Hull,—one for the Corn Exchange, to cost 1,300*l.*; one for St. Andrew's Roman Catholic Church, Nethergate, to cost 300*l.*; and one for the Roman Catholic Church at Lochee, to cost between 500*l.* and 600*l.*

Hawick.—The joiners' strike here has also come to an end, the masters having given the rise demanded by the operatives, which is an advance of 2s. per week.——Mr. Leslie, C.E., accompanied by a member of the town council, inspected the place where it is proposed to construct the reservoir for the Dean Burn Water Scheme. The opponents of the scheme, hoping to make capital out of the late disaster at Bradfield, have been exciting the fears of those resident on the burn. At a meeting, however, of the proprietors, all, with one exception, agreed to the scheme being carried out.——A large portion of the arch over the Slitrig, which is to form part of the site of the Exchange, has fallen into the bed of the river. It is now several weeks since the arch was finished, and the workmen were taking out the centres, when all that portion from which they had been removed, extending over nearly 15 yards in length, gave way.

Aberdeen. The episcopal church of St. Mary (which the English Bishop of Aberdeen has just refused to license) has been opened by the incumbent, the Rev. F. G. Lee, F.S.A. The general plan and design of the edifice are by the incumbent, who was one of the most active members of the Architectural Society of Oxford, from 1850 to 1854. Except in what the French call the *métier* of the building, however, and a general careful superintendence of the plan and details, assistance has been afforded by a young architect, Mr. Alex. Ellis. The style of architecture is Gothic, in important particulars of a Scottish character. It is peculiarly Scottish in the length and character of its long nave—altogether lacking aisles. As regards the west end, it appears to be somewhat in the style of the town churches of North Italy. The building consists of a nave 95 feet long by 40 feet wide, measuring outside the walls; a chancel, 35 feet long by 25 feet wide; with an organ-chamber to the south, and a vestry to the north of the chancel, each 15 feet by 14 feet. Under the chancel is a mortuary chapel, the roof groined in brick, and supported by freestone pillars, of exactly the same area as the chancel itself, with vaults, furnace-room, and lavatory flanking it. The side walls of the nave are 30 feet in height, and the apex of the roof 60 feet from the floor—higher, by some feet, than the nave of Lichfield Cathedral. The side walls of the chancel are of the same height as those of the nave, and the apex of the roof stands 53 feet from the floor. The chancel is divided from the nave by an arch, 50 feet in height by 20 feet in width. Externally, the masonry is of rough rubble granite, from Rubislaw the dressed base-course being of pale red Tyrebagger granite. A dark blue bastard granite, exceedingly hard, from Kemnay, together with red Turriff sandstone, and cream-coloured freestone from the Kenmuir quarries at Glasgow, are likewise used in the building. The west door is a lofty Pointed opening, with triangular tympanum of Glasgow freestone, in a circle of which in the centre is an ornament of polished red Derbyshire marble. On the apex of the door is a plain Maltese cross, and then, over a band of red sandstone, between two narrow bands of black granite, appears the great western rose window, 14 feet in diameter. This is likewise of plain tracery—the chambers of the various circles being ornamented with sculptured details. This, as all the other windows, is formed of alternate spaces of white and red freestone and hard dark blue granite. The tympanum of the door is supported on pillars and brackets of polished red Peterhead granite, the bases and capitals being of white freestone. The former have been carved by Mr. Brodie, of Aberdeen, sculptor. They consist of a mass of various sorts of lilies. The door itself is of teak, designed by the architect. We have not space to describe the interior, of which our authority, the *Banffshire Journal*, gives not only a full description, but an engraved view. One of the most notable features in it, as an episcopal church, is that the upper portion of the chancel arch contains a rood beam of varnished pine, on which is fixed a carved and life-like group, representing the death of the Redeemer. On either side stands a three-light branched candlestick in brass, which fills up and completes the design of this part of the building. On the front of the beam runs the following legend:—

"Effigiem Christi dum transis pronus honora,
Sed non Effigiem sed Quem designat adora."

Which is roughly Englished thus:—

"Honour by bending before the image of Christ while you pass,
But adore not the image, but Him whom it represents."

Very strong objections have been raised to this and other features, which are, naturally enough, viewed as symbols of doctrine not held by the reformed Church. Behind the beam is a row of gas jets, by which the chancel is to be lighted. Above and behind the altar, also, there is a picture of the Crucifixion by Mr. Westlake, which was exhibited in London. The whole of the glass, both in the nave and chancel, is by Messrs. Lavers & Barraud, of London. That in the nave is of different tints of green and blue, in geometrical patterns, designed not only to suit the peculiar tracery of the windows, but also to be appropriate for a church dedicated in honour of the Virgin Mary. The eight lancets and the two side circular windows of the apse are filled with *grisaille* glass, in which the lily, marygold, and fleur-de-lys are introduced. The seven small circular lights outside are occupied with representations of the following subjects, treated archaically:—1. The Annunciation; 2. The Birth of Jesus Christ; 3. The Presentation in the Temple; 4. The Baptism of Jesus Christ; 5. The Crucifixion; 6. The Resurrection; and 7. The Ascension. The large central circular light represents Our Lord in glory, throned and crowned, with a rainbow round the throne, while the Virgin Mary and St. John the Baptist are placed on either side. Below and around are the saints depicted, including SS. Andrew, Peter, Gregory the Great, Augustine of Canterbury, Margaret of Scotland, Thomas the Martyr, Cecilia, Agnes, Alban, the English proto-martyr, &c., &c. In the smaller circles are examples of the *lilium candidum*. The ground around the church will be laid out as a flower-garden, with trees and shrubs.

CHURCH-BUILDING NEWS.

Maddermarket. — St. John's Maddermarket Church, which, during the past year, has been undergoing such extensive repairs that it may almost be said to have been rebuilt, has been recently re-opened, after completion, at least in all its substantialities, though a good deal has yet to be done in providing the necessary fittings for the interior. The contract for the restoration, which was commenced in October last, was given to Mr. S. Hall, builder. The architects were Messrs. Elmslie, Franey, & Haddon, of London; and Mr. Hall subdivided his contract,—to Mr. Rust, the stonework; Mr. Downing, the bricklaying department; and Mr. Hardy, the glazing. The work was carried on under the direction of Mr. D. Smith, as clerk of the works. When the restoration was commenced it was found that the walls were out of the perpendicular by 2 feet, and the gable end by 15 inches. The walls are entirely rebuilt, the roof not being removed, but secured. The former ceiling has been supplanted by a stained boarded roof, and the organ, which was formerly stationed in the gallery, has been removed to the north-east end of the church, and the tower arch and window thrown open to the church, the latter being filled with stained glass. The vestry has been partly taken down, and the new roof so arranged as to throw open the north-east window, which was formerly blocked up by the old one. The church is not pewed at present, owing to the lack of funds; but a wainscot pulpit, on a stone base, has been furnished. Mr. Pank supplied the gasfittings, consisting of eight brass standards. The old gallery stairs have been removed, and replaced by new stone steps. In the interior of the church the pillars and stonework have been scraped and cleaned, and the monumental brasses all refixed. Mr. Lulham presented a stained-glass window for the western end; and the architects have promised a font.

Bishop's Caundle (Dorset).—The church here was reopened on March 31st, after having undergone extensive restorations. In plan it consists of a nave and south aisle, chancel, and western tower. The chancel is late Second Pointed, and the nave aisle and tower Third Pointed; the arcade between the nave and aisle being an insertion about 1600. The east end of the chancel is remarkable in having an old reredos of five moulded and cusped arches under the east window, which is placed very high up: under these arches is an oblong panel, formerly blank, but now filled in with sculpture representing the instruments of the Passion, with a floriated cross in the centre. The walls of the church have been for the most part rebuilt, reinstating the old windows. All the roofs are new, and are of the usual Somerset type, boarded to a curve and divided into panels, with carved bosses at the intersection of the ribs. The seats are of oak, of simple design: those of the chancel have carved ends. The pulpit is of Ham Hill and Marnhall stone, divided into panels, with carved heads, and in the panels are patterns and devices of the two stones contrasted. The font (Third Pointed) is replaced in its old position in the tower arch. This arch was formerly filled in, and a gallery obstructed the west end: it is now thrown open to the church. The windows of the chancel are all filled with stained glass, by Messrs. Clayton & Bell: the floor of the chancel is laid with Poole tiling, and Ham Hill and Marnhall stone. The carving of the pulpit, &c. was executed by Mr. Forsyth, and the works have been carried out by Mr. Taylor, of Bishop's Caundle, from the designs of the architect, Mr. William Slater.

Newent (Gloucestershire).—The new cemetery has been consecrated. The burial ground is within easy walking distance of the town. It is nearly two acres in extent, and is surrounded by a stone wall. At its lower end is a building divided into a church and chapel. Considerations of economy, it is said, have induced the directors of the scheme to disfigure the building by a mere apology for a steeple. The architect was Mr. Jacques, of Gloucester; and the builder, Mr. Spring, of Painswick.

Frome.—The restoration of the Parish Church is progressing. Two more instalments of the work were completed in time for the Easter festival, namely, the Ladye Chapel, and the organ. The Ladye Chapel is on the north side of the church. Until its restoration it was open to the church, but across the entrance there has now been placed a wrought-iron screen, in compartments filled with scroll-work, painted with foliage in gilt. It is the work of Mr. Singer. On the west side is a two-light window, the first compartment representing the Expulsion of Eve from Paradise; and the second, Isaiah's Vision of the Redeemer. On the north side, fronting the entrance, is a window of five lights. Each light is divided into three panels, and these portray principally the scenes in the life of the Virgin Mary. The upper portion of this window is filled with tracery of the Decorated period of art, containing the four Archangels and the emblems of the Virgin. On the east side there are a couple of two-light windows. One represents Our Saviour sinking under His Cross, and His descent from the Cross; the other His Entombment, and the death of Mary. It is meant that the north window should altogether represent the *Mater Amabilis*, and the two east windows the *Mater Dolorosa*. The whole of these windows are the gift of ladies bearing the name of Mary. The reredos, which is new, is of alabaster, carved into a representation of the slain Saviour. The artist was Mr. Ezard, of Bath, who has executed all the carved work. The walls round the *sacrarium* have been diapered to the height of the windows. The flooring of the *sacrarium* is of encaustic tiles, with marble squares at the intersecting angles of the panels, and dove marble in each alternate panel, so as to form a cross. A desire to preserve and restore, as far as possible, all the ancient features has guided the architect, Mr. Giles; but how much of these had disappeared may be inferred from the fact that the two east windows and the Norman doorway, a remnant of a still earlier church, have been re-opened, besides the restoration of the piscina and minor details. The stone-work generally has been restored, but the old roof has been replaced by a new one, in the Perpendicular style, and of the same design as the original. The arches have

been restored. The organ, instead of occupying the west gallery, and thus blocking up the great west window, has been placed on the north side of the chancel. The instrument has been entirely rebuilt and considerably enlarged. The work was done by Mr. Vowles, of Bristol. The organ has cost 500*l*.

Thurleston (*Devon*).—The old church here is now to be restored; also an additional wing on the north side, which is now in progress. The whole of the floors are to be raised, being below the outside surface and requiring ventilation, being damp. The old gallery is to be removed, the tower to be laid open, and the large arch repaired. There will be three new windows on the north side; the whole of the windows to be glazed with cathedral glass with margins. The roof is to be of wrought and stained woodwork. The organ will be placed in the north-east aisle. The contractors are Messrs. Milford & Sandford, of Thorverton. The carving is entrusted to Messrs. Rattee & Kett, of Cambridge, and is now progressing. The designs for the addition and restoring have been prepared by Mr. T. H. Elliott, of London, and the work is under his superintendence. The cost will be upwards of 2,000*l*.

Forest of Dean.—The new chapel at Newnham has been opened. The building is in the Decorated style, and has been constructed principally of native stone, in regular courses of rock-work, with Bath stone dressings. The frontage has a three-gabled porch, the entrance being made through the centre, leading to a large and open vestibule, out of which are two entrances to the chapel. Above the porch is a central window of stained glass, divided by four freestone mullions, with moulded caps, &c. The roof is covered with Brosely tiles. Internally, the roof is open, the wood-work being stained oak colour. The pews are of modern construction, made of stained deal, and having inclined backs, with a rise in the seat. There are eight windows of obscured glass, with a ruby border. Over the pulpit there is a circular window filled in with stained glass, in the centre of which is a representation of a dove descending. The window, together with the corresponding one in the front, was presented by Mr. Alfred and Mr. Tom Goold. The chapel is lighted with gas, in gilded stars, with a number of jets. The building will seat about 400 persons.

Sparkbrook (*Birmingham*). — A committee having been appointed to mature a project for the erection of a new church in this populous suburb, they selected five architects, says *Aris's Gazette*, and requested them to furnish competing plans for the proposed new church. Two of these gentlemen reside in Birmingham, two in the country, and one in London. The plans unanimously approved by the committee were those of Messrs. Medland, Maberly, & Medland, of Gloucester. It appears from the architects' plans that the style is Early Decorated. The edifice will consist of nave, 88 feet by 27 feet, with north and south aisles, each 88 feet by 13 feet 6 inches; chancel, 30 feet by 20 feet; organ chamber and vestry on the north side of the chancel; south porch, and tower 120 feet high, at the west end of north aisle of nave. The church is to be built with Hampstead walling stone, with dressings of Hollington free stone. It is arranged to accommodate 750 adults. The seats will be constructed of deal, moulded at the ends, and stained. The church will be lighted by large two-light windows in the aisles (the aisles being gabled to admit them), by a large four-light window at the west end of the nave (over the door), by a three-light window at the east end of the chancel, and by clerestory lights to the nave. The aisles will be separated from the nave by six moulded arches, supported on stone columns, circular on plan, with carved caps and moulded bases. The roofs will be open on the inside (showing the timbers, which will be wrought and stained), and covered outside with Westmorland slates. The floors will be paved with encaustic tiles. The church will be heated by Haden, of Trowbridge, and lighted by gas. The estimated cost (inclusive of boundary wall, and tower and spire) is 4,300*l*., exclusive of value of site. An eligible freehold site of more than half an acre has been offered, adjoining the Blue Coat School estate in Grantham-road.

Everton (*Liverpool*).—A monument has just been erected over the doorway in the south gallery of St. George's Church, Everton, in memory of the late Mr. Walter F. M'Gregor, of Liverpool. It is in the Gothic style of architecture, and is composed of alabaster and marble.

PROVINCIAL NEWS.

Ipswich.—At the usual monthly meeting of the Ipswich Dock Commissioners, the following report of the Committee of Management, on the death of Mr. Hurwood, their late engineer, was read:—"The committee record the death of their late engineer, Mr. George Hurwood, who had for many years very faithfully and conscientiously conducted the concerns of the Dock Commissioners to the general advantage of the port, and with much credit to himself as the superintendent of the port." It was resolved that the committee should take into its earliest consideration the question of appointing an engineer, and report upon the subject at the next meeting.

Brighton.—Operations have been commenced on the site for the erection of the west end pier, opposite Regency-square. The first pile has been sunk. According to the stipulations in the contract, the work will be complete in November.

Redditch (*Worcestershire*).—Improvements are in progress here. A new church has been constructed, with spire and clock; and a gas-house has been erected. New buildings, dwelling-houses, factories, and warehouses, are springing up in all directions; and a new county police-station and magistrates' rooms for the transaction of public criminal business have just been completed. The land on which the new station stands consists of 900 square yards, situate at the top of Evesham-street. The buildings are of brick, with Bath stone facings: there is an iron railing with pillars in front, and a brick wall encloses the rear of the premises. In the front are three entrances. The magistrates' room is 31 feet by 18 feet. At the back of the station are large enclosed drill and exercising yards for the police and prisoners, with carriage-house, stable, &c. The architect was Mr. Rowe, county surveyor; and the contractor, Mr. G. Hemming, of Redditch.

Penzance.—On the 28th ult., the tender for the proposed rooms for the Geological Society, the town, county court, public library, &c., were opened by the joint committees of the three bodies mainly interested, when they were found to be five in number, according to the local *Telegraph*, and as follows:—For the carpenters' work only, Mr. Thomas Carne, 5,673*l*.; for masons' and carpenters' work, Messrs. White & Bennett, 12,436*l*.; Messrs. Hubbard & Co., 11,287*l*.; Mr. Thomas Eva, 9,980*l*.; and Messrs. Olver & Sons, 9,695*l*. Messrs. Olver & Sons' tender was accepted, and the contractors have at once commenced their preparation of the ground. The glebe field not having been tilled for sixty years its surface is very desirable mould. This has been purchased by Mr. T. S. Bolitho of the contractors. Mr. John Matthews's estimate for the whole of the buildings, is stated to have been 10,070*l*. The eastern wing will cost 3,500*l*. The first masonry work will be the north wall. Wednesday, the 27th instant, is fixed for the laying of the foundation stone,—or stones, as probably the wings and centre may each have their separate memorial-block and ceremony.

Liverpool.—The foundation stone of the new workhouse for the West Derby Union has been laid at Walton-on-the-Hill. The house will be erected on an elevated plot of land at Walton, about 36 acres in extent, on the west side of the Liverpool and Preston turnpike road, nearly opposite to the Plough Inn, and adjoining the Lancashire and Yorkshire Railway. The extent of land covered by the workhouse and two hospitals will be 4½ acres. The main building is to be in the Italian style, three stories in height, and will be 487½ feet in length, having a wing at each end projecting 35 feet from the line of main building, and a central tower 120 feet high fronting the south. To provide against fire, a water tower will be built, and the water pumped up from a well near the tower. The buildings will be erected of brick, and Stourton stone dressings; and internally the corridors and staircases will be of incombustible materials. The house, with its adjuncts, will accommodate 1,000 paupers, and the estimated cost will be about 35,000*l*. Mr. William Culshaw is the architect, and Mr. James Walters the builder.

Bradford.—The foundation stone of the Eye and Ear Infirmary, of which we gave some account on the 19th March, has now been laid. The contracts have been let to Messrs. James Burnley & Son, masons; Ives & Son, joiners; Watson & Wormald, slaters; Walton & Brear, plumbers; Dixon, plasterer; and Harland, painter. Messrs. Lockwood & Mawson are the architects.

Darlington.—The foundation stone of a Temperance Hall has been laid in the village of Hurworth-on-Tees, by Mr. Joseph Pease, of Southend, Darlington. Mr. C. Hodgson is the contractor for the brick and stone work.

DECISIONS UNDER METROPOLITAN LOCAL MANAGEMENT ACT.

BUILDING BEYOND LINE.

Mr. Hayes, the proprietor of the George Tavern, Gravel-lane, Southwark, was summoned before Mr. Burcham (Southwark Police Court), by the District Board of Works of St. Saviour's, for unlawfully erecting a certain building adjoining his house beyond the line of frontage, without the consent of the Board.

Mr. Robinson, barrister, instructed by the Board of Works, said the defendant's house had been partially taken down by the London, Chatham, and Dover Railway Company, and some portions were pulled down. In consequence, in April last year, the defendant applied to the parish surveyor to erect a boarding, which was granted. Applications were afterwards made to the Board of Works to erect a building on that spot, but being beyond the regular line of frontage that was refused. The matter was then referred to the Metropolitan Board of Works, and by them to the superintending architect. That gentleman examined the plans, and wrote to the defendant's builder, informing him that the intended erection was beyond the regular line of frontage, and could not be allowed. Notwithstanding that, the building was erected, and the present summons was to compel the defendant to comply with the Act of Parliament.

The defendant said that about two years ago the London, Chatham, and Dover Railway Company took a portion of his premises, and in doing so the skittle-ground was pulled down, as well as the fence in front of the street, which had stood for many years. An arrangement was entered into to rebuild the skittle-ground, and the board applied for was put up where the old fence had formerly stood. The new building did not come within 10 inches of that, consequently there could have been no encroachment on the line of frontage.

Mr. John Howe, the parish surveyor, said he gave leave for the erection of the boarding, and as soon as the building was commenced he gave notice that it was beyond the line of frontage.

Mr. Burcham told the defendant it was quite clear that he had illegally erected a building beyond the regular line of frontage, without first obtaining the consent of the Board of Works. He therefore ordered it to be pulled down within fourteen days.

Mr. Hayes said that he had not the power to pull it down. He was a tenant of Messrs. Meux & Co., the brewers. He certainly should not touch it.

Mr. Burcham told him that he had nothing to do with that. He must make the order, and perhaps some arrangement could be entered into with the Board of Works.

ANOTHER DEATH FROM STARVATION IN BETHNAL GREEN.

It is not by the dismissal or compulsory resignation either of Dr. Moore on the one hand, or of the local relieving officer (who has well deserved his dismissal) on the other, that the Central Poor-Law Board are likely to be able to remove the discredit to us as a nation which the Bethnal-green "guardians" of the poor are bringing upon us. Merciful guardians, truly! were not their "tender mercies" rather of the "cruel" order. In the latest case of cruelty and manslaughter brought against them,—that of Mary Anfield, the husband of the deceased, who is a weaver, stated in his evidence before the coroner, that,—

"The deceased having been ailing about a week at the end of February, he got a parish order for the doctor, and Dr. Moore attended on the 28th. He gave a certificate for her admission to the workhouse infirmary next day. Witness thought it was an 'order,' and he took deceased out of bed and carried her in a cab to the workhouse. There she was refused admission. The porter said, 'We have had enough of Dr. Moore's writings. It would be on my peril to admit you on this paper.' Deceased was unable to stand. Her daughter and another woman had to support her and keep her from falling by propping her up against the railings with their hands. Her knees shook and trembled, and she vomited violently. It was raining hard, and she shook with cold. Mr. Christy in the morning had sent a note for witness to come at two o'clock, as the board of guardians would then be sitting. He begged the porter to let her in, but he said it would be as much as his place was worth. He did so without an order. Deceased was at the gate near an hour in the rain. She said, 'I shall die in the streets if you do not take me back. I have got my death-blow.' Witness then took her home, and she got worse. He went to Dr. Moore and got an order for nourishment, which he took on the Tuesday to Mr. Christy. The latter said, 'I will give no nourishment. You must both come into the house.' Witness said, 'It is very hard that the parish should be burthened with two when only one wants relief.' Christy said he did not care: both should come in. Ultimately he sent an order of admission to witness. While deceased, who, after another delay at the workhouse gate, was admitted to the house on March 2, was in the infirmary she complained that the meat was so hard she could not eat it, and sometimes it was so raw she could not manage it at all. She begged to be taken home, but before witness could do so she died."

Dr. Moore corroborated this evidence so far as his part in it was concerned. Dr. Gant said death had been accelerated by want.

Lord Robert Cecil, we observe, applies in the Commons for copies of the minutes of evidence

taken before the inspectors in the case of Sarah Dove; of the depositions of the coroner's inquest in the same case; and of all correspondence that has passed in reference to the dismissal of Dr. Moore.

Books Received.

The Stream of Life on our Globe. By J. L. MILTON, M.R.C.S. London: Hardwicke. 1864.

THIS very entertaining and well-written volume gives a sketch in untechnical language of the beginning and growth of life, as geology seems to have revealed it in the stony archives of the globe; and of the physiological laws which govern the progress and operations of life on its surface. The stripping of science as much as possible of the long-winded Greek and Latin nomenclature under which it is being hidden from the mass of the people is very desirable; and Mr. Milton shows how easily this can to a great extent be done. He rightly warns authors who are lovers of such a system, that in a generation or two, either by further changes in their ultra-learned phraseology, or by its disuse altogether, their works will be buried among the dead languages and all but forgotten; while books written in a simpler and more English language, will entirely supersede them, as the living languages in general have superseded the dead in scientific treatises.

We by no means assent to many of the author's views; but even those from which one cannot but differ are so gracefully and pleasantly written that all disposition to quarrel with them is soon forgotten, even if apt at all to be excited. The ingenuity with which the author, for example, maintains the earth to be the only habitable and comfortable world, which he does by running down all the other planets as if he had tried them all, and found, at last, that, after all, "there is no place like home," is at least amusing if not very convincing. We have no doubt that in the hot hell of Mercury, as Mr. Milton seems to conceive it to be, the very same feeling prevails; as, it may be, it also does in Jupiter, whose terrible cold, no doubt, made him shiver to the bones as he "took root" there. But could it have been much worse than the glacial era at home, do as he think? A little lifting of the land—towards the sun of course—did all that here, according to Mr. Milton; and might not a little levelling on Jupiter, on a like principle, modify his rigour? As regards the mere fact of distance from the sun, the heat or cold of a planet probably does not so much depend on that as on other, such as atmospherical, causes; and it may be a great mistake to think that because Mercury and Venus are so near the sun they must necessarily be excessively hot, especially with such atmospheres as theirs appear to be, and with mountains 27 miles high—a lifting of the land with a vengeance!—such as Venus at least is said to have. Men of science have even maintained that heat is only produced in the planetary precincts, while light alone emanates from the sun. In such a case Mercury and Venus, mayhap, are very cold places to live in, for all that we know. At all events, it is rather too fast thinking to regard our own little morsel of dirt as the only pleasant place in all the universe.

VARIORUM.

THE April number of the *Art-Journal* commences a history of Wedgwood and the Etruria works, and gives an engraving, amongst many others, of "The Fighting Téméraire," after Turner. Mr. Dafforne treats of Pugin Williams, Mr. Thomas Wright of the Grotesque in Art, and Professor Archer of the Materials of Clothing.—— "Notes on the Architecture of Ireland" (Aghadoe & Muckruss) are continued in the present number of the *Gentleman's Magazine*, and the second of the papers "Art applied to Industry,—Glass," appears. A report on Excavations in the Crypt of St. Peter in the East, Oxford (read at the Oxford Architectural Society), is illustrated.—— In No. IX. of "The Herald and Genealogist," Mr. Gough Nichols reprints, from our pages, with some agreeable comments and illustrations, Mr. Planché's capital "Literary squabble; *in re* Lord Houghton." The opening paper, a good one, is on "The Heralds' Visitations of Counties."——"Letter to the Right Hon. Sir Robert Peel, Bart., M.P., on a Plan for Converting the Royal Dublin Society and Museum of Irish Industry into a National Institution for Ireland. London: Williams & Norgate." The author of this pamphlet, who signs himself "An Old Member of the Royal Dublin Society," says of his plan:—"Thus, instead of two heavily-subsidised establishments in one city of scarcely more than 250,000 inhabitants, we should have but one—well organized and founded for the public weal one in which the people of the country could take a common interest—and one which will be at all times fully amenable to the Parliament of the country and the Government of the day. At present it is not astonishing that the Government act with extreme caution in granting the sums of money really wanted and constantly demanded by the Royal Dublin Society; but then, having confidence in their own appointed trustees, such demands would, in all probability, obtain a ready response, greatly to the advantage of Ireland and affording to the parties that give and those that receive, equal satisfaction. To suggest the possibility of such a state of things is the object of this letter, and I would hope that the Parliamentary committee will find out the feeling of the people of Ireland on this question." In reference to this subject we may here remark that on the motion of Mr. Gregory, in the Commons, a select committee has been appointed to inquire into the condition of the scientific institutions of Dublin assisted by Government aid.—— The new number of *The Art-Student* has, *inter alia*, an illustrated paper on "Regular Five-lobed Flowers as Objects for Flat Decoration," deserving the attention of architects as well as others. On what sound grounds an artistic journal, aiming, amongst other things, we suppose, at the adornment of the metropolis, opposes in the abstract the erection of a monument to Shakspeare, it would be hard to discover. —An extra double number has been issued of *Chambers's Journal*, as a "Shakspeare Tercentenary Number," and is a capital three-pen'orth. On 32 pages it gives a careful and written account of the Birth, Birthplace, Life, and Writings of the poet, with 16 illustrative engravings.—*The News Almanac*, 1864, gives lists of Insurance Offices and their Directors, Railways, and Banks.

Miscellanea.

STAINED-GLASS EXHIBITION. — The arrangements for this exhibition, which is to be held in the South Kensington Museum, are now nearly completed. The exhibition will open very shortly.

ASSEMBLY ROOM AND BATHS FOR BRIGHTON.—The borough surveyor has been empowered to obtain assistance in London, in order to prepare plans for a public assembly room and for public baths.

ROYAL ITALIAN OPERA.—Following the programme to which we have already referred, Mr. Frederick Gye has proceeded thus far in his present campaign with great brilliancy. Herr Wachtel, very nearly new to England, has achieved a remarkable success in the "Trovatore." A good actor, with good appearance, and extraordinary command of voice, this artist has already become a favourite, and bids fair to prove one of the best cards in the manager's hand. The opera was altogether well done, Madlle. Fricci making a satisfactory *Leonora*, Sig. Mario has re-appeared in "Massaniello," with all his old grace and much of his old power. His reception was enthusiastic. On Thursday evening, General Garibaldi was to visit the opera, and would doubtless find in it a brilliant crowd to receive him.

THE REMAINS OF CLARENDON HOUSE, PICCADILLY. In Piccadilly, between Bond-street and Berkeley-street, stood, in old times, the house of the great Lord Chancellor Clarendon. It was afterwards sold to Sir Thomas *Bond*, of Peckham. The Clarendon Hotel, in Bond-street, preserves the two names. Many pedestrians will remember two large Corinthian pilasters, one on each side of the Three Kings Inn gateway, in Piccadilly, adjoining the old Glo'ster Hotel: these were the only remaining portions of Clarendon House. One of these disappeared a year or so since; and now the second has been removed, to give place to a "street-door." Several correspondents have observed upon this, and one writes:—"Some might attach a degree of interest to a relic connected with the career and times of the famous chancellor, and, instead of having it ruthlessly swept away, would possibly think an odd nook might be occupied by them without disadvantage in some kindred collection."

TO DEADEN SOUND.—I have seen the bell-chamber floor of a large church covered with *turf*, effectually deadening a noise, almost unbearable before in the ringing-loft, immediately below. Whether conducive to health I cannot say; but should imagine, if kept dry, not the contrary.—D.

THE LIVERPOOL FREE LIBRARY BUILDING: FEE TO SURVEYOR.—The sum of 1,000*l.* has been presented by the Liverpool council to Mr. Weightman, the surveyor, for his services in preparing the plans for, and superintending as architect, the construction of so much of the Free Library and Museum as was erected at the cost of the late Sir William Brown, Bart.

SOCIETY FOR THE ENCOURAGEMENT OF THE FINE ARTS.—The fourth *conversazione* of the season of this society took place on Wednesday evening, in the gallery of the Society of British Artists, Suffolk-street, Pall-mall, when there was an unusually numerous attendance, it being understood that Lord Stratford de Redcliffe, the new president, would make his appearance in the chair for the first time. His lordship, who was warmly greeted on his entrance, delivered a brief address, in which he expressed his entire and deep sympathy with the objects of the society.

A "TELEGRAPH CONSTRUCTION AND MAINTENANCE COMPANY (LIMITED)."—An announcement was made in our last issue of advertisements that a company is being formed under this title, for the purpose of uniting the business of the well-known Gutta Percha Company with that of Messrs. Glass, Elliot, & Co., the contractors for the Atlantic cable. Among the directors we observe the names of Mr. Thomas Brassey, Mr. Samuel Gurney, M.P., and others of respectability and influence. The capital of the new company will be 1,000,000*l.*; first issue, 750,000*l.*, in 37,500 shares of 20*l.* each; deposit 1*l.*, and on allotment 3*l.* per share. The offices are at 23, Great George-street, Westminster.

COVENTRY AND WARWICKSHIRE NEW HOSPITAL. The outlay was limited to 5,000*l.*, with additions for Riga oak floors and Parian cement on the walls. The committee met on the 13th for the purpose of opening the tenders, and the result was as follows:—

		Additions.
Robinson	£5,740 0 0	.. Not sent.
Fox & Co.....	5,738 0 0	... £233 0 0
Merrett	5,618 0 0	.. 245 0 0
Mault	5,480 0 0	.. 363 0 0
Hallam & Co...	5,430 0 0	... 223 0 0
Dutton	5,400 0 0	.. 190 0 0
Wilson	4,950 0 0	... 212 0 0

Mr. Wilson's tender was accepted at the sum of 5,162*l.* Messrs. Nevill & Son are the architects.

TO MISS GLYN, ON HEARING HER SHAKSPEARIAN READINGS.

His were the wondrous words! Thine was the art
To wake to life and breath each separate part.
Thine was the task to re-create again,
The glowing fancies of the poet's brain.
As from thy lips thy master's precepts fell,
Perchance his spirit answer'd to thy spell,
And in thine eyes the glorious light that shone
Burn'd with a fire and passion all his own.
What nobler tribute could thy genius ask,
Than that we hail thee worthy thy great task?
For him be column rear'd, let marble speak,
Do all that man can do, and then how weak!
They can but tell that England's bard has been;
'Tis such as *thou* shall "keep his mem'ry green!"

Plymouth. L. N.

THE RE-DECORATION OF THE PAVILION-ROOMS, BRIGHTON.—At the last council meeting, the Pavilion Committee submitted the tenders received by them for cleaning and re-decorating the Pavilion suite of rooms, in accordance with the designs and specifications prepared by Mr. Pantaenius, and approved of by the council at their last meeting. The tenders were as follows:—W. Davidson, London, 3,825*l.*; R. Palmer, Brighton, 3,732*l.*; W. Sendall & Son, Brighton, 3,524*l.*; G. Smith, London, 3,113*l.*; T. Dury, Warwick, 2,750*l.*; J. L. Coulton, Hampstead-road, 2,597*l.*; W. Jackson, Eastbourne, 950*l.* The committee recommended that the tender of Mr. Tony Dury be accepted, subject to the approval of his securities by the committee. They further recommended that Mr. Pantaenius should be employed on behalf of the council, on the terms mentioned in his letter of the 6th January last, to superintend the carrying out of the contract. After some discussion, partly in favour of giving the contract to Mr. Coulton, the committee's report was approved of and adopted.

Gift of a New Chapel at Runcorn.—Mr. Hazlehurst, of Runcorn, has announced his intention to erect in that town a Wesleyan Methodist Chapel, at an estimated cost of 6,000*l*. Mr. Hazlehurst has already erected chapels and schools at Widnes, Halebank, and Ditton, on the Lancashire side of the Mersey, and in Cheshire at Helsby and Five Crosses.

International Exchange of Copies of Works of Fine Art.—The Committee of Council on Education have lately approved of a memorandum on this subject, in which it is stated that the period seems to have arrived when friendly relations might with reciprocal advantages be established through the Foreign Office, between foreign museums and the South Kensington Museum, for the purpose of organizing some system of an international exchange of copies of the finest works of art which each museum possesses. The object in view will be promoted by correspondence with the Governments of the various countries which possess museums and works of art.

Southampton.—The Bargate is undergoing restoration; the modern cement facing being first cleared off, and the ancient stone-walling once more being made visible. The Georgian windows are being replaced with windows to correspond in outline with the earlier openings, of which there are sufficient remains to guide the architects. All the debased portions are or will be taken away, and the genuine Mediæval work, whether early or late, will be preserved. The works are being carried out under the care of Mr. J. G. Poole, the Town Surveyor, assisted by the advice of Mr. Edward Roberts, architect.

Hamburg.—Mr. Wood, who for many years was been the Clerk of Works for St. Nicholas's Church, Hamburg, has been appointed to carry out a new Cemetery Chapel, about to be erected outside the city of Hamburg. The chapel will be of interest as being a posthumous work of Chateauneuf, the well-known architect, who died some twelve years ago in Sweden, ending his days in a madhouse which he himself had built. The chapel will be in yellow sandstone, and the cost is estimated at about 2,500*l*.

Manchester Sanitary Association.—The annual meeting of this association has been held under the presidency of the bishop of the diocese. The right rev. chairman, after passing a high eulogium upon the late Alderman Neild, commended the association to the interest of the meeting. He said rightly that it was necessary to make the home comfortable, cleanly, and orderly before the work of planting the seeds of religion was commenced. The report of the association dwelt upon the desirability of establishing an institution for the training of nurses for Manchester and its vicinity.

Cleaning Oil-paintings.—A new method of restoring old paintings is said to have been invented by Pettenkofer, a famous Bavarian chemist, and which a friend of his, Carl Vogt (himself a man of European repute as a natural philosopher), has brought to London, and lately exhibited in a practical example to Sir Charles Eastlake. The process, it is said, involves no chemical preparation whatever, is perfectly simple, and can be applied and acts in half an hour. It may be used, also, by a reversed application of it, to give the appearance of age to newly-painted pictures. The inventor has already received a considerable sum for his discovery from the Bavarian Government.

Accidents.—A road bridge which conveys the traffic between Cambridge and Newmarket, &c., over the Great Eastern line, at a place known as Paper Mills, in the Barnwell suburbs, has given way. The bridge, which dates from the formation of the line, is a girder one, with a centre-way for the metals, and two arches on either side, with a centre pier to sustain the girders. It is the pier on the Cambridge side that has given way, having, it appears, been built upon a treacherous galt foundation. The road material fell in a confused heap at the side of the line, but was prevented by the inner pier, which is intact, from intruding on the metals: thus the trains were not impeded.——The hanging stair inside a house at Gloucester-street, Glasgow, has fallen, carrying with it the whole of the joisting and internal structure of the building. Two plasterers were killed on the spot, and other two workmen severely injured. The partition against which the stair had been erected was built of a single 4-inch brick, and was, it is said, totally inadequate to support the strain that was brought to bear on it.

The Hotel Movement.—Seven tenders for preparing the foundations of the New Cardiff Hotel were received, viz.—D. Jones (accepted), 1,150*l*.; Messrs. Webb, 1,340*l*.; Cooper, 1,375*l*.; John & Son, 1,952*l*. 10s.; James & Price, 1,269*l*. 11s. 6d.; R. R. Watkins, 1,250*l*.; and Shepton, 1,220*l*.

The Proposed New Government Department. Mr. Tidd Pratt, the Registrar-General of Friendly Societies, has been designated to the office of general manager of the insurance department of the office about to be created by Mr. Gladstone's Government Annuities Bill. It is understood that the salary attached to this appointment will be 5,000*l*., with the option of simultaneously holding his present appointment of registrar. Dr. Farr will be the actuary, at a salary of 2,500*l*., but it is understood that his new appointment will not interfere with the holding of his present office.

Liverpool Docks: Raising of River Wall. At a meeting of the Docks and Harbour Board, the Works Committee recommended the Board to complete the north river wall, at a cost of about 20,000*l*. Mr. Bold said that the engineer reported that during the recent gales the sea made a clear breach over the wall, and injured the backing-up so much as to a certain extent to endanger the wall itself. He therefore recommended that the wall should be raised immediately, and that there should also be a parapet wall of about 4 feet high above the originally intended height, involving altogether an expense of 20,000*l*. The original estimate for finishing the wall was 11,500*l*., so that they were going to an additional expense of 8,500*l*. for that work. The confirmation of the proceedings was agreed to.

The Campbell Drinking Fountain, Nottingham.—Shortly before his death, Mr. Hugh Bruce Campbell formed the idea of erecting a drinking fountain on the Alfreton-road, where there was much need of water for horses to drink. At the time of his death, Mr. R. C. Sutton was engaged for him in designing a fountain and watering-trough, to be erected just at the commencement of the hill. Mrs. Campbell and her children resolved that the wishes of the deceased should be rigidly adhered to. Mr. Sutton supplied the plans. The contract was taken by Mr. C. Lowe; and the fountain has just been completed. It is 14 feet high, is of Gothic design, and is built into a stepped gable of brick-work. The material used is Robin Hood and a contrasting Gazeby stone. The watering-trough projects 2 feet 7 inches, and is 6 feet long. It is supported on an arched basement, and is fed by two taps surrounded by ornamental carving, placed one at each side of the tablet. The drinking-basin is of Gazeby stone, supplied from a tap in the tablet, the carving around which is somewhat more ornate than that of the other two. At each side of the tablet is a pillar, the shafts of Gazeby, and the bases and capitals of Robin Hood stone. The marsh-mallow, water-cress, and other aquatic plants are introduced into the carving of the capitals, from which springs a high-pitched Gothic arch, with cinquefoil cuspings on the inner edge. The whole is surmounted with a moulded stone coping, with carved finial.

Puddling by Machinery.—Messrs. A. Beards & Sons, of the Regent Works, Bilston, have had in operation for the past three weeks a machine for puddling iron. The machinery is described as being of simple construction, nominal in cost, and applicable to any ordinary puddling furnace or series of furnaces. It is the invention of Mr. Griffiths, the manager of the ironworks of Messrs. Eastwood & Son, at Derby, where it is said to have been in successful operation for the past three months. Mr. Griffiths calls it "The Poor Man's Friend;" but the puddlers at the Regent Works were by no means inclined to regard it as their friend. So soon as the "melting moment" comes, and the hand-work of keeping the iron curds and whey continually stirred arrives, when the puddler should begin to strain back, muscle, and nerve, and perspire from every pore of his naked skin, he coolly puts his long rake or poker into the hands of a long iron bar, with a rest that does duty for hands, and which hangs suspended in front of the furnace; turns on the steam; and immediately the iron bar begins puddling with a measured turn, twist, and poke, which works the iron quite clean from the bottom and out of the jams of the furnace, and puddles it about into the ball and condition that render it agreeable to the shinglers. The regular character of the iron the machine turns out is spoken of as its great characteristic.

The Power of the Penny is well illustrated in the accounts of the Birkenhead ferries. In the year ending March 31st, their returns were nearly 36,000*l*., and their profits above 13,000*l*.

Church and Chancel.—The Court of Exchequer Chamber has decided, in the long pending case of Griffin *v.* Deighton, that the incumbent and churchwardens of a parish have a right of access to every part of the parish church. Where there was a door leading from without into the chancel, upon which the lay rector had placed a lock, which he kept locked except during divine service, the incumbent was held to be entitled to have access to the chancel through that door at all times.

The "Great Eastern" and the Atlantic Cable.—The steamship *Great Eastern* has been taken up by Messrs. Glass, Elliot, & Co., the contractors for the Atlantic cable, for the purpose of laying it between England and America. The *Great Eastern* will be handed over, on the 1st of May, to the contractors, who from that date pay all the expenses of the steamer; and when the cable is laid the proprietors of the *Great Eastern* are to receive 50,000*l*. in paid-up shares of the Atlantic Telegraph Company. The cable, however, will not be laid across the Atlantic till spring.

A little Bill against the Mersey Dock Commissioners.—At a recent meeting of the Mersey Docks and Harbour Commissioners, considerable sensation was caused by the reading of a letter from Mr. C. Maciver, the agent at Liverpool for the Cunard Company, in connexion with a dispute between the board and the steam shipowners, relative to extra dues proposed to be levied on steamers. The letter stated, that the Cunard Company had a claim against the board for "460,000*l*.—say half a million," for loss incurred by inadequate accommodation afforded to that company at the port of Liverpool. The letter was ordered to lie on the table for perusal, the latter words being added probably with the view of avoiding the appearance of insult to a gentleman so widely known and respected in Liverpool as Mr. Chas. Maciver.

Railway Matters.—The traffic receipts of railways in the United Kingdom amounted, for the week ending the 26th of March, on 11,184 miles, to 601,625*l*.; and for the corresponding week of last year, on 10,805 miles, to 526,484*l*.; showing an increase of 379 miles and 75,141*l*. in the receipts.——Last year, in Scotland, with a population of 3,000,000, the number of persons who travelled by rail was 17,000,000; whilst, in Ireland, with 5¾ millions, only 10,000,000 travelled. The goods carried in Scotland amounted to 15,000,000 tons; and in Ireland only to 1,500,000 tons.——A new railway station has recently been erected on the Hyde and Marple Railway, at Marple, and will shortly be opened. The building is of brick. There are four waiting-rooms, station-master's house, booking-office, and other conveniences. There are overhanging roofs, on iron pillars, over the platform. The station is about 130 feet long. ——The Great Eastern Railway Company, for the purposes of their foreign traffic, are about to erect another pier at Harwich. The contract has been taken by Mr. Perry, of Stratford, and the works will be commenced at once.

Monument at Harrow.—A memorial has recently been placed at the south end of Harrow Church to the memory of the Rev. Wm. Oxenham, late second master of Harrow Grammar School. The material is of Cornish granite and serpentine, and consists of one large stone, 6 feet 10 inches long, 3 feet 1 inch wide, and 2 feet thick, which has a chamfer 4½ inches wide all round it. The inscription is cut on the chamfer in bold Roman letters 2 inches long and ¼ inch deep. On the top of this is another large slab of polished granite, 6 feet 2 inches long by 2 feet 10 inches wide, and 6 inches thick. This stone slopes from the centre 2 inches, showing an edge 4 inches thick. A flat place, 4 inches wide, is left in the centre, on which is laid a serpentine cross 6 feet long: the arms of the cross slope from the shaft 2 inches toward the edges. The granite is from the Lamorna Quarries of Messrs. Freeman, and the serpentine from the East Carne Quarries of Lord Falmouth. The whole is enclosed with a granite kerb and ornamental railing. The tomb is fixed close to the large tree known as "Byron's elm," and near the stone on which the great poet used to sit and enjoy the surrounding scenery. The tomb was designed and executed by Mr. John Murphy, serpentine worker.

Copper.—No improvement has occurred in the demand for this metal, and it may now be bought at 3*l.* to 4*l.* under official rates.

A Church Struck by Lightning.—On the 29th ult., the spire of Trinity Church, Westgate, Southwell, was struck by lightning, and so seriously damaged that it is a question whether it will not be necessary to pull it down. The lightning first struck the iron rod on which the vane is fixed, splitting a solid oak beam into which the end of the rod was inserted a few feet from the top.

Shakspeare Celebration at Stratford.—The proposed exhibition in the Town Hall of the various portraits of Shakspeare extant, and of the most eminent representatives of his characters, will be an attractive feature of the approaching festival. This exhibition will be enriched by valuable acquisitions in the shape of many of the finest works of art that now adorn the private galleries of our nobility and gentry. The Queen has been pleased to recognise the "very remarkable occasion" which the Stratford Committee has undertaken to celebrate, by granting the loan from the Royal Gallery of Sir Thomas Lawrence's picture of "John Kemble in the character of *Hamlet*."

The Building Trades.—Some dissatisfaction seems to exist in Basingstoke among the operative carpenters, who complain in the local press of "the inadequate wages given by the building trade, as not being sufficient to keep them in a state of decent respectability." This is a question, however, not very likely to be arranged by public controversy. —— At Inverness the joiners and carpenters have struck work for an advance of wages equal to 2*s.* a week. The *Inverness Advertiser* had stated the required advance to be 3*s.*, and that the masters had offered 2*s.*, but the correctness of this statement is denied on the part of the operatives.

Caution to Builders. — At the Manchester County-court, recently, an action was brought by a coal-dealer, named John Marsh, against a contractor named Thomas Mitchell, to recover 20*l.* damages to the waggons and coal shed by the falling of a chapel in course of erection adjoining his premises, in Upper Medlock-street, on the 3rd of December last. Mr. Smith (Smith & Boyer) appeared for the plaintiff; and Mr. T. E. Jones for the defendant. The defence was that the defendant was not liable on two grounds;—first, that the falling down of the chapel was occasioned by unavoidable circumstances; and secondly, that the defendant was the contractor only, and let off all the work except the joiner's and carpenter's work, which he did himself, to sub-contractors, who were liable if anybody was liable. After hearing the evidence on both sides, the judge stated that he was of opinion that the plaintiff was entitled to recover damages, as it was quite clear that the building was not so substantially erected as it ought to have been, and that the defendant was the proper party to be charged with those damages. He, therefore, gave a verdict for the plaintiff, damages, 11*l.* 8*s.* 8*d.* and costs.

Bristol Society of Architects.—The attention of the last monthly meeting of this society, held at the Academy, Queen's-road, was directed to the remains of a roof, fireplace, and carving existing in the Old Angel Inn, High-street, and which building is about to be demolished; and it was determined to write to the city treasurer thereon, requesting that such portions as were considered worthy should be given to the Academy, to add to their museum of local antiquities now forming. Afterwards, Mr. Masters read a paper upon Hotels. The lecturer drew attention to the success attendant upon the erection of hotels in England, and instanced the Great Western Hotel, at Paddington, and then went on to describe the early inns or hostelries existing in Chaucer's time, to those of Shakspeare, and to the times of Dr. Johnson. He also gave a description of the remains of the old inns of Bristol, and the various galleried inns of the same character at London, Gloucester, and elsewhere, dwelling at some length upon the Tabard in Southwark. He then described the monster hotels of America and Canada, also those of Vienna and Paris, including the Hôtels Louvre and De la Paix. The modern English hotels were dwelt upon at some length, and the Dover, Great Western, and London Bridge Railway Hotels; also the Westminster Palace and Grosvenor Hotels, and many others, were described.

Items from India.—A public meeting of the inhabitants of Bombay, convened by the sheriff, and held in the town hall on the 9th ult., voted a statue to the Hon. Juggonath Sunkersett.—— It has been determined to appoint a committee to report on the proposed line of railway through Central India and Rajpootana.

In Cloth Boards, 2*s.*

ANOTHER BLOW for LIFE.

By George Godwin, F.R.S.

Assisted by Mr. J. Brown.

With 11 Illustrations.

"Let it be remembered that these new pictures of London sketches: read in a work of fiction they might be rejected as exaggerations if not invention. There is no past-place pictured or described which Mr. Godwin has not personally inspected. The names and places are continually given. He does not ask his readers to accompany him and share the perils he has bravely and often encountered; but he does ask them to ponder over these graphic details, and aid him to accomplish the benevolent object, the very thought of which is appalling to an enlightened and Christian people. Notwithstanding the awful nature of his theme, he has made his book interesting. It is full of illustrative anecdote. While there is no pretence in the style to semblance of fine writing, it is the production of a scholar and a gentleman, deeply anxious to have his work read, and adapted, not to swing the mind that a degree of refinement may strengthen and not weaken forcible language and energetic thought."—*The Art Journal.*

London: W. H. Allen & Co. Waterloo place.

TENDERS.

For works of the Patent File Company, Smethwick, near Birmingham. Mr. R. C. May, engineer:—

Contract No 1.—Engineers' and millwrights' work. Drawings supplied —

Sir G. W. Armstrong & Co.	£10,659 0 0
Easton & Amos	9,131 0 0
Simpson & Co.	8,125 0 0
W. May & Co.	7,890 0 0
Thorneywell & Warham	7,350 0 0
James Watt & Co. (accepted)	7,160 0 0

Contract No. 2.—Iron, glass, and zinc roofing. Detailed drawings supplied:—

Perry & Sons	£4,924 0 0
M'Kenzie & Co.	4,750 0 0
Handyside	4,775 0 0
Hill & Smith	4,160 0 0
The Horseley Company	4,000 0 0
Ashbury & Co.	3,700 0 0
The Tividale Company (accepted)	3,660 0 0

Contract No. 3.—Builders' work. Quantities supplied by engineer:—

Bartlett & Co.	£10,500 0 0
Harley & Co.	9,229 0 0
Willett & Sons	8,175 0 0
Barnsley & Co.	7,880 0 0
Estcourt	7,750 0 0

NOTE.—*The responsibility of signed articles, and papers read at public meetings, rests, of course, with the authors.*

[ADVERTISEMENTS.]

STAINED GLASS WORKS. — HEATON, BUTLER, & BAYNE have REMOVED to their new and extensive Premises,
KING STREET, COVENT GARDEN, W.C.

ADVERTISEMENTS.

FINCHLEY, MIDDLESEX.—SALE of BRICKS, on the PREMISES, adjoining the turnpike-road, and north upon the Saint Pancras and Islington Cemetery.

MESSRS. DENT & SON will SELL by AUCTION, as above, on THURSDAY, the 28th day of APRIL, 1864, at ONE o'clock precisely, in Lots, about 32,000 BRICKS; consisting of malms, stocks, pickings, and place bricks.—The particulars will be ready forthwith, and may be obtained on the Ground; at the White Lion and Bald-faced Stag Inns, Finchley, and of Messrs. DENT & SON, 34, Great James-street, Bedford-row, W.C.

BROMLEY, KENT.—Second Sale.—Charming BUILDING SITES for Gentlemen's Residences, immediately adjoining the Shortlands station, on the Mid-Kent Railway, near the important junction at Beckenham, and consequently within very easy reach of nearly all the London termini.

MESSRS. DEBENHAM & TEWSON are instructed to SELL, at the MART, on TUESDAY, MAY 3rd, in lots of from ¼ acre to 6 acres each, a portion of the remainder of the very valuable FREEHOLD BUILDING ESTATE, known as Shortlands, affording some of the most agreeable sites to be met with near London. Excellent roads have been made, and nearly all these lots have large frontages thereto, and are within two or three minutes' walk of the station.—Plans, with particulars, may be had of Messrs. BURCHELL, solicitors, 5, Broad Sanctuary, Westminster; of JOHN WHICHCORD, Esq., Architect, No. 16, Wallbrook; and of the Auctioneers, No. 80, Cheapside, who will in the meantime be prepared to treat by private contract.

WIMBLEDON. The beautiful ESTATE formerly attached to the residence of LORD COTTENHAM (now removed), comprising the richly-timbered Cottenham park Grounds and Gardens, situate on the south-west slope of a considerable hill, enjoying uninterrupted views of some of the finest scenery in the county of Surrey, and affording an almost unrivalled opportunity for a gentleman desirous to build, and to combine the advantages of a modern mansion with an ancient park and grounds in one of the most delightful districts near London, and for the like reasons especially eligible for a large institution, or for sub-division and the erection of first-class villas.

MESSRS. DEBENHAM & TEWSON are instructed to SELL, at the MART, on TUESDAY, JUNE 7th, at TWELVE, in 17 Lots, varying from ¼ acre to 6½ acres each (unless an acceptable offer be previously made for the whole), the very valuable and most beautiful FREEHOLD ESTATE, known as the Cottenham-park, comprising nearly 40 acres of magnificently timbered Grass Land, having the important advantage of a park wall, a shrubbery, an abundance of good water, extensive frontages to good roads, opportunity to a church, ready accessibility from London by rail (shortly to be extended to Cannon-street) and situation and scenery that justly obtain for the property the title of the gem of the neighbourhood.—Particulars in due course of Messrs. FRESHFIELDS & NEWMAN, Solicitors, No. 5, Bank-buildings; and of the Auctioneers, 80, Cheapside, who are fully authorized to treat for the sale, in one Lot, by private contract.

PIMLICO.—Important Unreserved SALE in consequence of the Dissolution of Partnership in the old-established firm of TURNER and OWST, PAPER-STAINERS, ELIZABETH STREET SOUTH, PIMLICO.

MR. EDWIN WHITE will SELL by AUCTION, on the PREMISES as above, on TUESDAY, APRIL 19th, and following day, at TWELVE, in numerous lots, the entire WORKING PLANT and STOCK of a well-known firm of PAPER-STAINERS, comprising 21 printing tables of an admirable construction, and adapted for the production of first-class work, 9 other desirable block printing machines, 36 heavily weighted Grass Hoppers, grounding, sanding, oaking, and striping machines, several hundred sets of printing blocks, including a number of new ones intended for this year's trade, 250 decorative finishes, 6 chests of upwards of 20 reams fine elephant in flat and roll, 30 cwt. buffalo lide pieces, 4 tons French white, 3 tons whiting, dry colours and chemicals, best leaf metal and bronzes, useful sets of all trade hands, harness, four-wheel travelling chaise, and numerous other items.—May be viewed on Monday prior and morning of sale, when catalogues may be had on the Premises, and at the Auctioneer's offices, 12, Holborn Bars, E.C.

PIMLICO.—In consequence of the Dissolution of Partnership of Messrs. TURNER & OWST, the old-established Paper stainers.

MR. EDWIN WHITE will SELL by AUCTION, on the PREMISES, ELIZABETH STREET SOUTH, PIMLICO, on TUESDAY, APRIL 19, at ONE, about the Lot, the LEASE of the most desirable MANUFACTURING PREMISES, together with the whole of the useful fixed PLANT, many years employed in and particularly adapted to the production of Paper-hangings in an extensive way, but capable of easy conversion to any other wholesale trade.—Printed particulars will shortly be obtainable on the Premises; of R. PLEWS, Esq. Solicitor, 31, Mark lane; and at the Auctioneer's Offices, 12, Holborn Bars, E.C.

PIMLICO.—The whole of the Unrivalled Stock of PAPERHANGINGS and DECORATIONS, for Unreserved Sale, in consequence of the Dissolution of Partnership of Messrs. TURNER & OWST.

MR. EDWIN WHITE will SELL by AUCTION, on the PREMISES, ELIZABETH STREET SOUTH, PIMLICO, on THURSDAY, APRIL 21, and following days, at TWELVE, the whole of the extensive stock of PAPERHANGINGS and DECORATIONS, consisting of upwards of 30,000 pieces, in golds, flocks, satins, grounds, Scagliola and Sienna marbles, architectural and flora borders and decorations, &c., including all the newest and most admired patterns issued by this renowned house.—May be viewed early in the week of sale when catalogues may be had on the Premises, and at the Auctioneer's Offices, 12, Holborn Bars, E.C.

VAUXHALL-GARDENS ESTATE, LAMBETH, SURREY.—Valuable FREEHOLD BUILDING LAND, arranged in lots, suitable for the erection of Shops, Residence for Operatives, Packet-ice, and Business Premises; also GROUND RENTS, amounting to 30*l.* per annum.

MESSRS. DRIVER & CO. are instructed by the Mortgagee, under power of sale, to submit to AUCTION, at the MART, near the Bank of England, on FRIDAY, MAY 20, in numerous lots, to suit the convenience of purchasers, some very valuable FREEHOLD BUILDING LAND, situate in the parish of St. Mary, Lambeth; comprising a considerable portion of the site of the late Royal Vauxhall Gardens, and having frontages upon Kennington-lane, Vauxhall-walk, and several new roads and streets, called Parkland-street, Burnett-street, Brunel-street, Leopold-street, Gye-street, and Italian-walk. The Vauxhall Station, on the South-Western Railway, and the River Thames are close to the property, affording ready access from all parts, as well as facilities for the transit of goods. The sale will also include several lots of Ground Rents, amounting together to 30*l.* per annum. Detailed particulars, with plans, may be obtained at the Royal Vauxhall Tavern and other Inns in the neighbourhood; at the Auction Mart; of Messrs. KEMPSON & TROLLOPE, Solicitors, 31, Abingdon-street, Westminster; and of Messrs. DRIVER & CO., Surveyors, Land Agents, and Auctioneers, 4, Whitehall, London, S.W.

Land-surveying and levelling, if fully required to act as a good general assistant. Terms and reference.—Address, T. G. B. Chevelier, Bowness, & Son, 12, Bell-yard, Temple-bar.

TO ARCHITECTS, &c.

AN Efficient and Thoroughly Practical Assistant wishes for an Engagement either in the Office or as CLERK OF WORKS. Is well up in Detail and Construction, and the Management of Estates, &c.—Address Architect, 27, Bishopsgate Street Within.

TO NOBLEMEN, GENTLEMEN, ARCHITECTS, AND OTHERS

PRACTICAL CARPENTER and JOINER, aged 34, married, is in want of a SITUATION as HOUSE CARPENTER and JOINER on an Estate, or to SUPERINTEND the REPAIRS of HOUSE PROPERTY, or any situation where first and confidence is required. First-class references for ability, sobriety, &c.—Address, JOINER, care of Mr. Ayliffe, Photographer, 20, Thames-street, Kingston-on-Thames, S.W.

A WELL-QUALIFIED General ASSISTANT who will be disengaged on the 23rd instant, is desirous of RE ENGAGEMENT in an Architect and Surveyor's Office. The advertiser is a thoroughly efficient and practical draughtsman, neat colourist, well versed in quantities, detail, and construction; competent with land surveying, mapping and levelling. Aged 28, terms moderate. Good references.—Address, A. B. 195, High-street, Rochester, Kent.

TO TIMBER MERCHANTS, BROKERS, AND OTHERS

AS CLERK, BOOKKEEPER, COLLECTOR, or MEASURER.—WANTED, by a young Man, aged 23, SITUATION, in either of the above capacities. Writes a good hand, and is thoroughly acquainted with book-keeping. Seven years' reference to late employers. — Address, M. H. 22, Park-street, Mile End, London.

AS CLERK or TIMEKEEPER, aged 35, accustomed to keep time, receiving delivery, and order work, taking out prime costs, collecting accounts, paying wages, &c. With good character and reference.—Address, F. Mr Carrington, 48, Rowland street, Tottenham Court road.

TO BUILDERS AND CONTRACTORS.

A SON of a Builder is desirous of being ENGAGED in a BUILDER'S FIRM. Has a good knowledge of the business. Can superintend, measure work, copy and price plans, and assist in taking out quantities, and is willing to make himself generally useful. Town preferred. Age 22.—Address, B. B. Post-office, Romsey, Hampshire.

MUTUAL LOAN FUND ASSOCIATION

(Incorporated by Act of Parliament, 1850), 14, Russell-street, Covent Garden, LENDS MONEY on personal or other security, in sums of 20l. to 500l. to be repaid by instalments extending over one, two, or three years. The large capital of this Association enables it to complete its transactions without delay. No inquiry or office fees, and strict secrecy observed. Bills discounted at short notice. Forms sent free on receipt of a directed stamped envelope.

The Association also lends money for the purchase of a house by a tenant, or for the liquidation of mortgages on terms most advantageous to the borrower.

EDWARD HARPER, Secretary.

TEN THOUSAND POUNDS READY TO BE ADVANCED by the TEMPERANCE PERMANENT LAND AND BUILDING SOCIETY, on Freehold or Leasehold Property, for any period of years not exceeding fifteen, the mortgage being redeemable by equal monthly instalments. Interest (in addition to a small premium), 5 per cent. on the balance each year.—Apply to HENRY J. PHILLIPS, Secretary.

Offices, 34, Moorgate-street, London, E.C.

NOTE.—More than a quarter of a million pounds sterling have been advanced upon house property alone.

MONEY on FREEHOLD and LEASEHOLD PROPERTY, by the MUTUAL LOAN FUND ASSOCIATION

Incorporated by Act of Parliament, 1850), 14, RUSSELL STREET, Covent Garden, W.C. Advances from 100l. to 1,000l. upon Freehold and Leasehold Property for any term up to ten years. Mortgages redeemed, and the advance can be repaid by easy instalments. Facilities afforded to tenants to purchase the houses they occupy, and the repayment of the advance taken as rent. Greater advantages are offered to borrowers than in building societies, there being no shares to subscribe for, or competition for an advance, and no deduction from the loan. No preliminary fees. Prospectus and forms of proposal sent on receipt of a directed stamped envelope.

EDWARD HARPER, Secretary.

TIME IS MONEY.—All who employ workmen should send two stamps to MERRITT & HATCHER, 2, Grocers'-hall, Poultry, E.C. and by return of post they will receive a variety of useful Forms, by which book keeping is facilitated, and loss of time and material prevented.—MAPS, PLANS, DRAWINGS BILLS of QUANTITIES, &c. expeditiously Lithographed in the best style, at the lowest possible charges. — MERRITT & HATCHER, Printers in every Branch, 2 Grocers'-hall-court, Poultry E.C.

THIRTIETH ANNUAL GENERAL

MEETING of SHAREHOLDERS of the AGRA and UNITED SERVICE BANK (limited), held at the Bank, 27, Cannon-street, E.C. on SATURDAY, APRIL 2, 1864

George Gordon Macpherson, Esq. Chairman, in the Chair

The notice convening the meeting and the following report and statement of accounts were read

The Directors have to submit to the Shareholders the audited accounts for the year ended 31st December last, and to report that, after making ample provision for all bad and doubtful debts, the net profits of the Bank for the year amounted to £2,000,102 1s 2d.

Out of this sum the Directors have declared, free of income tax, two half yearly dividends, at the rate of 10 per cent. per annum each, and have added to the last of these a bonus of 4l. per share, thus making a return for the year of 15 per cent. on the paid-up capital of one million sterling.

From the balance remaining the Directors have refunded to reserved fund the sum of £ 347 2s 4d, taken from it at last year, and, in consideration of the greatly extended business of the bank, have carried to credit a further sum of 25,000, thus raising the fund to 225,000. They have also passed the sum of 5,000 to superannuation fund, and 17,000 to building fund, carrying forward 10,762 1s 2d to credit of profit and loss account for the current year

Since last annual meeting the Directors have purchased desirable premises in Sydney, and have secured land at Shanghai, Karrachee, and Malta, and new to the erection of suitable buildings for the branches at those ports

The present Auditors be eligible for re-election, in terms of the deed of settlement, offer themselves accordingly.—By order of the Board,

MACKINTOSH BALFOUR, General Manager

Secretary, A. F. HAY, 41, Castle street, Leicester square.

A FREEHOLD MANSION TO BE SOLD.
The elegant Furniture may be had at a valuation. There are four receptions rooms, two being 50 feet in length, eleven best bedrooms, standing for eight horses and coach-houses for four carriages; suitable servants' offices, extensive ornamental grounds, with green houses, in all 28 acres; gravelly soil; near Sunningdale Station, South-Western Railway, half a mile from Windsor Great Park, and fifty minutes from the Waterloo Station.—Apply to J. MAY, Esq. Solicitor, 67, Russell-square.

VALUABLE PREMISES.—Large, open SPACE, with an area of 1,230 square yards, TO BE LET, immediately, with or without workmanship, as the tenant may require, in frontage of 167 feet to the road, situate in a main thoroughfare, on the north of the Bank. The extension of railways and city improvements, causing such a consequent scarcity of premises, render these extremely valuable.—Apply to E. & W. STURGE, Bridge-wharf, City-road, E.C.

DEPTFORD, Kent.—To BUILDERS, ENGINEERS, SHIPWRIGHTS, SMITHS, MANUFACTURERS, and Others requiring or desiring commodious Tenements or Residences for their workmen, or to sublet, or to any trade wishing to provide improved Dwelling Houses for their Operatives, together with Trinity House, having on every premises for the inmates of their establishment known as the Lower Ground Almshouses, at the Stowage, Deptford, comprising Twenty-six detached Dwellings, hereby give notice, that they are willing to receive TENDERS for LETTING the said HOUSES on a repairing lease for 21 years, or more, as may be agreed. Each house consists of a basement, ground, and chamber story; five having yards and additional offices; and the others can readily have every necessary accommodation added to them. The whole is approached from the Stowage, a centre roadway, and is inclosed within itself as a distinct precinct. These houses are situated in the centre of the large manufacturing districts on the South side of the Thames They are within 200 yards of the Deptford Pier, and at the ferry, very conveniently situated in relation to the large district of the many factories on the opposite side of the river, from Mill-wall and the Isle of Dogs to the localities adjoining Fox Point and Greenwich, apply to Mr. NORTHWOOD, No. 1, on the Premises. The whole are to be Let by Tender, in One Lot, and MONDAY, the 30th of MAY next, in the day fixed by the Corporation for receiving the Tenders for the further particulars apply at the offices of Mr. RICHARD SUTER, Architect and Surveyor, 25, Gracechurch-street, E.C. and where a plan of the property may be seen.

P. H. BERTHON, Secretary.
Trinity House, March 28, 1864.

BUILDING LAND at CHITT'S HILL, WOOD GREEN, overlooking three different counties, and fronting the High road, eight minutes walk from the station and Alexandra Park, TO BE LET for the erection of superior Villa Residences, which are in great demand in this beautiful locality. Term, 99 years. Money advanced if required.—A plan may be seen and particulars obtained, on application to S. HEWITT, Architect and Surveyor, 101, Great Russell-street, Bloomsbury, W.C.

WATERSIDE PREMISES, CITY-ROAD.
MESSRS. FULLER & HORSEY are instructed to LET, on Lease, from Michaelmas next, Extensive WATERSIDE PREMISES, occupying a site of 31,000 superficial feet, situate on the Wenlock Basin, City-road, and comprising a spacious and substantial modern brick manufactory of two floors, erected on lofty brick piers, with Engine-house, Steam-engine and three Coal-barners; range of brick built offices, and paved yards with gateway entrances. There is a water frontage of about 270 feet.—For further particulars apply to Messrs. FULLER & HORSEY, No. 13, Billiter street, London, E.C.

THE BERNEY ARMS PORTLAND CEMENT WORKS, TO BE LET for a Term of Years, driven by Steam and Wind power; are in complete repair and working order, and calculated to carry on a trade to any extent, being in the neighbourhood of an abundant supply of the best materials, with water carriage to most parts of Norfolk and Suffolk, and through Yarmouth to all the world. The Berney Arms Station is within five minutes' walk leading to Norwich, Lowestoft, and Yarmouth.—Apply to Mr JAMES NESBIT, Merton, Norwich.

CITY of LONDON.—Very valuable and Extensive Building site, close to Wood-street.—The Court of Assistants of the Worshipful Company of Salters are prepared to receive TENDERS for taking a BUILDING LEASE or LEASES, for a term of 80 years, of the whole or part of all that valuable Plot of Land, containing about 11,000 superficial feet, situate close to Wood-street, Cheapside, and having frontages, to Foil street of 120 feet, Harb-street 87 feet, and Monkwell-street 138 feet. A plan of the ground may be seen, and forth particulars obtained, on application at the Clerk's Office, at the Hall, in Southampton Buildings, Chancery-lane, Fetter-lane, or to the Company's Surveyor, JOHN COLLIER, Esq. 20, Finsbury-street. Tenders to be delivered to EDWARD THOMPSON, Esq. Clerk of the Company, at Salters' Hall, and delivered on or before the 23rd day of MAY next, at TWELVE o'clock at noon.

FREEHOLD LAND TO BE SOLD or LET, on Building Leases.
2 Acres, near the Station, at Forest-hill.
1 Acre, adjoining Norwood Junction Station.
2 Acres, Grange-road, Old Kent-road.
A large WHARF TO BE LET, near the Old Kent-road.
Apply to Mr. MAY, Acorn Timber Wharf, Old Kent-road.

IMPORTANT to COAL PROPRIETORS, CAPITALISTS, and OTHERS.—The owners of valuable MINES of COAL, lying within and under a compact freehold estate of upwards of 1500 acres, situate about three miles from the important manufacturing town of Blackburn, Lancashire, are prepared to treat for the absolute SALE of the COAL, or to enter into favourable arrangements for leasing the same for a term of years. Good turnpike roads intersect the estate, and the same is within very easy distance of railway and canal.—For further particulars apply to Messrs. ROBINSON & SON, Solicitors, Blackburn.

BROMLEY, KENT.—To BUILDERS.—WANTED, by SEPTEMBER next, in a pretty situation in this locality, and not far from the railway-station, to be taken on LEASE, with option of purchase, an elegant, architectural, and well-constructed detached RESIDENCE; containing five or six good bedrooms, a dressing-room, dining and drawing rooms, small library, and the usual domestic offices; also a coach-house, two-stall stable, and laundry, together with a good garden tastefully laid out and stocked with shrubs, &c.—Apply, by letter, to H. F. H. care of Mr. A. J. Hall, Stationer, 78, Old Broad-street, City, E.C.

A CAPITAL WHARF TO BE LET, with Crane, near the Midland Railway, Camden-town.—Apply to Messrs. STRINGFIELD & BLYTH, Bangor Wharf, Camden-town.

TO BRICKMAKERS and CONTRACTORS.—TO BE LET, for a term of years, or otherwise, all that TEN ACRES of Capital BRICK EARTH, situated close to the water side, and near a Railway-station in the County of Essex.—Address, E. W. care of Mr. SKIPPER, 18, Jewry-street, London, E.C.

A LARGE BUILDING FOR SALE, at present used as a church, accommodating 1,000 persons.—Address, ZETA, 2, Northumber and Houses, King Edward's road, N.E.

TO BUILDERS.—LAND at NORWOOD, TO BE LET, for Building. Sixty per cent. advanced on account. For particulars address, J. B. Office of "The Builder."

THAMES BANK, PIMLICO. Extensive PREMISES, with the partial use of a Private Dock entering from the Thames, suitable for a Builder's Establishment or a Factory. TO BE LET on LEASE for a long term, at a moderate rents.—Apply to Messrs. SCURRY & WRIGHT, Surveyors, No. 6, Salisbury-street, Strand, W.C.

SOUTH CLIFF BUILDING ESTATE, TENBY, Pembrokeshire.—This Estate presents to Builders and others an unusual opportunity for a first class investment in the fashionable sea-side watering place.—For plans and particulars apply to Mr. J. H. SHIPWAY, Architect, 18, Great George street, Westminster, London; or J. MAULE SUTTON, Esq. Broomfield, Narberth, Pembrokeshire.

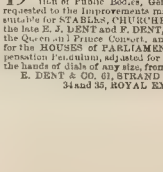
BUILDING LAND, TO BE LET, at low Ground Rents.—

UPPER NORWOOD	Villas	Rental £50
PERRY HILL, SYDENHAM	Shops	,, £30
HACKNEY (best part)	Dwelling House	,, £30
DALSTON (do.)	do.	,, £30

Money advanced if required.
Apply to Mr. T. K. GREEN.
25, COLLEGE HILL, CANNON STREET, E.C.

WANTED to RENT, Small PREMISES, with Dwelling-house, in any town or village where there is an opening for a Bricklayer or Builder's Business. Distance from London no object.—Address, with full particulars, X. X. X. Office of "The Builder."

TO BUILDERS.—BUILDING LAND TO BE LET, at Ealing, W. near to the Common, five minutes' walk from the station. The ground has a frontage of 65 feet, suitable to build a detached villa.—Apply to Mr. LIDDELL, Ravensworth Villa, The Grove, Ealing.



TO BUILDERS.—TO BE LET, in part or whole, a PLOT of 12 Acres of FREEHOLD BUILDING LAND, situated at Leyton, Essex, within five minutes' walk of the Railway-station at Leyton. Houses fitting at 30l to 50l. per annum are much needed in this locality, which is only six miles from the Bishopsgate-street and Fenchurch-street Stations, and within ten minutes, by railway, of Epping Forest. Soil, gravel. Drainage excellent. The Estate is laid out according to special Plan.—For particulars apply to Mr. KEATES, 140, Strand, W.C.

TO BREWERS and OTHERS.—For SALE, by PRIVATE CONTRACT, a Plot of FREEHOLD BUILDING LAND, in the immediate proximity of the Reading Stations on the Great Western, South Eastern, and South-Western Railways, and abutting on a road which will soon become one of the principal thoroughfares to these Stations. The site is admirably adapted for a good second class Hotel Money advanced if required. Apply to Mr. WM. WEEDON, Solicitor, Reading.

TO BUILDERS.—TO BE LET, the different WORKS required in the Erection of a Malt Kiln, purposed to be erected in connexion with the Trafalgar street Brewery in Manor Place, Bradford.—The plans and specifications may be seen at my Office, from SATURDAY, the 2nd, to SATURDAY, the 9th instant, when the estimates are to be delivered. J. C. ROPE, Architect.
31, Kirkgate, Bradford.

BUILDING LAND, Reading, Berks.—FOR SALE, by PRIVATE CONTRACT, in lots suited for the erection of private Dwelling houses, several acres of FREEHOLD BUILDING LAND, forming part of the rapidly improving Western suburb of the town. The situation of the Estate is excellent. The property is ornamentally timbered, and several portions of it are well fenced in with hedges, and planted with trees and shrubs of many years' growth. Distance from the centre of the Town and three Railway-stations, about a mile. A second Church is being erected in the immediate neighbourhood. Money advanced if required.—Apply to Mr. W. WEEDON, Solicitor, Reading.

TURRET CLOCKS, designed and constructed upon the most approved plans and of the very best workmanship and materials, at the lowest possible prices, for Cathedrals, Churches, Public Buildings, and Gentlemen's Mansions, Stables, &c., comprising Turret Timepieces, Striking, Quarter, and Chime Clocks. Windclocks made and fixed. Also Clock dials adapted to the various orders of Architecture.

JOSEPH FAIRER,
188, St. George street East, London.
By Special Appointment to the Queen and to his late Royal Highness the Prince Consort, her Majesty's War Department, &c.
Maker of the Great Clock of the Tower of London.
The Village Clock, price 10 guineas.

DENT'S TURRET CLOCKS.—The attention of Public Bodies, Gentlemen, and others, is respectfully requested to the Improvements made in the Construction of CLOCKS, suitable for STABLES, CHURCHES, and other Large Buildings, by the late E. J. DENT and F. DENT, Clock and Chronometer Makers to the Queen and Prince Consort, and Makers of the GREAT CLOCK for the HOUSES of PARLIAMENT, &c. Turret Clocks, with Compensation Pendulum, adjusted for variations of temperature, to work the hands of dials of any size, from 1 foot to 30 feet diameter.
E. DENT & CO. 61, STRAND (adjoining Coutts's Bank); and 34 and 35, ROYAL EXCHANGE, LONDON.

DESACHY'S FIBROUS PLASTER.

GEORGE JACKSON & SONS,

HAVING BECOME THE PROPRIETORS OF THE PATENT RIGHTS IN

DESACHY'S FIBROUS PLASTER,

Beg to call the attention of Architects to its Capabilities.

It is adapted for the speedy and economical production of any coffered or circular work, waggon headed ceilings (all bracketing being avoided, as it is fixed to the joists direct), fluted and plain columns, panelled dados, all kinds of draper, &c., for the linings of walls and ceilings, and for all purposes of ornamental plaster.

The advantages are great. It is of great lightness and of excellent quality; it is not inflammable, and is ready to be painted immediately after it is made; it has been used (under the direction of Owen Jones, esq.) for the ceiling of St. James's Hall; at Messrs. Osler's, Oxford-street; Mr. Hancock's, New Bond-street; the Crystal Palace Bazaar; the House for the Aged, South Lambeth; and at various other Works.

SPECIMENS CAN BE SEEN AT 49, RATHBONE PLACE.

DESIGNS MADE FOR ANY WORKS.

Also Licensed Lighterman, of 11, Millbank-row, S.W.; and Licensed Lighterman and Wharfinger, of Hermitage Steam Wharf, Wapping, E.

TO BRICKMAKERS.—All Parties who BURN BRICKS in CLAMPS are invited to inspect the NEW MODE of SETTING, patented by Mr ROBERT WHITE, and which may be seen in operation at the Brickfields of J. B. WHITE & BROTHERS, Erith, Kent. The advantages of this plan are two-fold. 1st. Nearly all the bricks are burnt into stocks, and the yield of inferior bricks is reduced from 30 to about 10 per cent of the total make, which in itself represents a large permanent saving. 2nd. The bricks are so much improved in colour and soundness as to give them a considerable additional value in the market over common stocks. Licences for use of the Patent granted to Brickmakers, on application to the Patentees, 17, Millbank-street, Westminster

BRICKS, PANTILES, AND PAVINGS. J. H. ANDREWS, Wisbech, offers Red Pantiles, at 47s. 6d. per 1,000. " 8 inch Pavings, 55s. per 1,000. " Floor Bricks, 40s. per 1,000. White Kiln ditto, 40s. per 1,000. Ridge Tiles, at 75s. per 1,000. Cash Prices. Delivered in Trucks in London, or along the Line on the Great Eastern Railway. Quantities may be delivered by Vessel at any of the Thames Wharfs.

RED BRICKS, STOCKS, PAVIORS, PALE and BRIGHT YELLOW CUTTERS.—ROBERT LITTLE, Brickmaker, Slough, begs to inform Builders and the Trade generally that he is now prepared to Supply any quantity of good well burnt RED BRICKS (either plain, rubbed, or moulded), suitable for facings. Mr. LITTLE is able to Load Bricks for London, or any other part, by either the Great or South Western Railways.—The Bricks may be seen, and prices obtained, either at the Field, Slough, or on application to R. LITTLE, Great Western Railway, Windsor.

BRICK MAKING and BRICK PRESSING MACHINES, DRAIN PIPE and SEWAGE PIPE MACHINES, with every requisite for the MANUFACTURE of BRICKS and PIPES, Clay Crushing, Pugging, and Screening Machines. EAST GREENWICH,

EDWIN HOLLICK,

MANUFACTURER OF PORTLAND CEMENT, OF THE BEST QUALITY ONLY, FOR THE ENGLISH AND FOREIGN MARKETS. VESSELS LOADED ALONGSIDE.

ESTABLISHED 1850.

HALL, BROTHERS, late of MERSTHAM GREY STONE LIME WORKS, resigned the above Works on the 25th March, at the expiration of their Lease, in consequence of being unable to effect such terms for a renewal as they could accept. The Works above being used by them for nearly forty years, during which time a considerable business has been established, and now to give them up so unexpectedly, with only a few weeks' notice, without any remuneration for the trade, is caused to them great loss and disappointment. Anxious that their customers should not be inconvenienced by the sudden change, HALL, BROTHERS, have arranged for them to be supplied in LONDON, and by Railways from these Works, upon the terms they existing, until the 24th JUNE, by Mr. W. PETERS. They wish to remind their customers and the public that their business in Grey Stone and Quick Lime, Cement, Slates, Sand, Coal, &c. is carried on as usual at Croydon, Coulsdon, Redhill, and Reigate; and, should they be successful in obtaining premises for the manufacture of Grey Stone Lime, they will resume their trade in London and on the Railways as usual, and hope for a continuance of that support they have hitherto so generously afforded them. Address,

HALL, BROTHERS, Croydon, or Redhill, Surrey.

SHIPMENTS ON THE SHORTEST NOTICE.

PURE HYDRAULIC LIME, Manufactured from the best HALKIN MOUNTAIN LIMESTONE, sawn as supplied for the construction of the Liverpool and Birkenhead Docks.
The HOLYWELL LIMESTONE COMPANY are prepared to deliver the above, in lump or ground, packed in bags, into waggons, at the Holywell Station of the Chester and Holyhead Railway, or on board vessels at Greenfield Wharf, Chester River.
Prices and particulars furnished on application to Mr. EVAN EVANS, Manager, Pary's Mine Works, Holywell, Flintshire.
The Company guarantee the quality of the Lime to be equal to that used by the Engineer of the Liverpool and Birkenhead Docks.
Agents wanted. No applications attended to without a banker's reference.

BARROW LIME.—JOHN ELLIS & SONS, Leicester, are now prepared to DELIVER the best FRESH BURNT BARROW LIME, at the St. Pancras Station of the Midland Railway, direct from the Kilns, at 20s. per ton.—The Barrow Lime is well known as a very superior Hydraulic Lime from the Blue Lias Stone.—March, 1864.

ESTABLISHED 1844.

JOHN BOARD & Co.'s CEMENT and LIAS LIME WORKS, Dunball (near Bridgwater); Office, Queen-street, Bridgwater. JOHN BOARD & Co. beg to inform Builders, Contractors, and Merchants that they continue to manufacture CEMENTS and BLUE LIAS LIME, at Dunball, near Bridgwater, which, from increased appliances to their works, are enabled to execute orders for the same to almost any extent.

HYDRAULIC LIME and ROMAN CEMENT, manufactured by LLOYD JONES & CO. Halkin Works, Holywell, Flintshire. The Halkin Hydraulic Lime is the same as used in the construction of the Liverpool Docks, Manchester, and various waterworks, collieries, and mines throughout the country, being so long celebrated for its strong cementitious and protecting powers for masonry in water. Can be supplied by rail or water to any part of the kingdom, either in lump (loose), or ground, also in barrels and bags. The limestone can be had in full cargoes, and their cement in barrels, which is of a very superior quality and guaranteed pure. Orders to be accompanied by a banker's reference, delivery at the Works; or to E. & W. AARON, Agents, 66, South John-street, Liverpool.

Self-Regulating Pan Closet.

THOMAS LAMBERT & SON,

Lambert's Ball Valve.

High-Pressure Ball and Screw Valve.

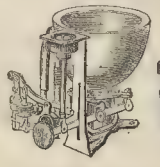
PATENTEES and MANUFACTURERS, SHORT STREET, NEW CUT, LAMBETH.

T. L. & SON find it necessary to state that their manufactures have their NAME legibly marked thereon.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.

ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. which is sold under the name of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can tell the difference between such material. Workmen who have once used the Patent Zinc Paint will never willingly be induced to use any other Paint for their best work.



CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,

WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

J. TYLOR & SONS' PATENT REGULATOR WATER-CLOSETS.

Valve.

Pan.

The Regulator Valve gives perfect control over the supply of water to each closet, so that, however small the fall of water, perfect flushing is insured. All the number can be worked by one simple lift. No intervalves, chains, or wires required. The Closets can be seen in action at the Manufactory, and Illustrated Catalogues had on application to the Manufacturers, J. TYLOR & SONS, Warwick-road, Newgate-street, London.

INTERNATIONAL EXHIBITION, 1862.

CLASS 35, No. 6849.

3s. 9d.

The ONLY MEDAL "for STONEWARE" has been awarded to DOULTON & WATTS, LAMBETH POTTERY, LONDON.

In consideration of a greatly increased sale, D. & W. have determined to introduce the annexed pattern of their ENAMELLED STONEWARE CLOSET PANS, at the price of the commonest description of earthenware.

Experience has shown that this shape is the most simple and efficient, and that in strength, durability, and cleanliness it cannot be surpassed by the most expensive closets.

FIGURE "D" STONEWARE CLOSET PAN AND TRAP, 3s. 9d. COMPLETE.

PRIZE MEDAL TO MAW & CO. INTERNATIONAL EXHIBITION 1862.

IMPERISHABLE TESSELATED PAVEMENTS,

combining a highly decorative and economical substitute for ordinary tiles of their perishable coverings MAW & CO.'S Pattern book, designed by M. Digby Wyatt, esq. together with a special design and estimate of cost adapted to any given dimensions of hall, passage, conservatory, verandah, friezes, &c. will be sent on application to Benthall Works, Broseley, Salop.

May be seen at the Exhibition of Building Inventions, &c. now open at the Galleries of the Architectural Exhibition, 9, Conduit-street, free.

London Agents—W. B. SIMPSON & SONS, 456, West Strand, who have on view a great variety of Specimens of the Pavements.

PEAKE'S TERRO-METALLIC TILES,

PIPES, &c. Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 91, Wharf, Macclesfield-street, North, City-road (as No. 2 only), that the trade term, "TERRO METALLIC," is the exclusive right of the Proprietor; and finally, that the "Records of the Jurors," page 681, of the Great Exhibition, 1851, note the grant of a First-class Medal and rank this Manufacture known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

TWO PRIZE MEDALS AT THE INTERNATIONAL EXHIBITION.

MAGNUS'S ENAMELLED SLATE

obtained the Medal of the Society of Arts; the Prize Medal at the Great Exhibition, 1851; Two First-class Medals at the Paris Exhibition; and Two Prize Medals at the International Exhibition of 1862.

Trashy imitations of this beautiful material are being palmed upon the public. Architects are therefore requested to see that the name of "MAGNUS" is upon each article.

Chimney-pieces, Billiard Tables, Table tops, Baths, Wall-linings, &c. a New Illustrated Catalogue of which can be had at the Pimlico Slate Works, 29 and 30, Upper Belgrave place, Pimlico, S.W.

NO SHUTTER BARS.

JENNINGS'S SHOP-SHUTTER SHOE.

SHOP-SHUTTERS are SHOD and SECURED by the above, at HALF THE COST OF THE USUALLY AND DESTRUCTIVE SHUTTER BAR. Scoops referred to in every public street in London.

When ordering the above, send FINISHED THICKNESS of fronters, and the way they go up.

MARINE RESIDENCE, with 24 acres of Land, distinguished as Appley House, an important Freehold Property on the Coast, at Ryde, Isle of Wight With immediate possession

MESSRS. FULLER & HORSEY are instructed by the Trustees to SELL by AUCTION, at the MART, London, on WEDNESDAY, JUNE 15, 1864, at TWELVE o'clock in one lot, APPLEY HOUSES and ESTATE, an important freehold property, situate within a few minutes' walk of the pier, at Ryde, Isle of Wight, possessing many rare natural advantages as a residence of the highest class for the erection of villas, so greatly in demand in this much-admired watering-place. Appley being now the only land available for such a purpose with a sea view, the site is eminently suited for residences near the town of Ryde. The estate is literally within a ring fence, the northern boundary being girt by the sea, and secured by a stone wall, forming an esplanade in a line with the principal terrace at Ryde, leading to the pier. The land here, which rises precipitously, is covered with a thick wooded plantation, the ramous of which would (if declired) enable the owner to realise a large sum for the timber, without at all interfering with the privacy or views of the higher portion of the property. The surface of the land is undulating, rising to the house on the north side, sloping towards the west and south by Lower Stanhill Farm and part of Whitnash Mills, and at the north-eastern extremity by the turnpike road (separating at that point a small portion of this lot) leading from Blackburn to Accrington, and consisting of the farm-house, farm, and other buildings, and the several closes, pieces or parcels of meadow and pasture land delineated and described in the plan thereof (No 4) hereinafter referred to, and containing together in statute measure 29a. 0r. 25p.

Lot 5.—All that Farm and Tenement (formig part of the Stanhill Farm) situate in the township of Oswaldtwisle aforesaid, on the north east side of and bounded on the south west side by the turnpike-road leading from Blackburn to Accrington; consisting of the several closes, pieces, or parcels of land fully delineated and described in the plan thereof (No 5) hereinafter referred to, and containing together in statute measure 18a. 1r 20p.

Lot 6.—All that Farm and Tenement known by the name of the Stanhill Farm, with the substantial and well-accustomed Inn or Public house (known as the Spread Eagle), with the farm and other buildings thereon, situate in the township of Oswaldtwisle aforesaid, on the south side of and bounded on the north by the turnpike road leading from Blackburn to Accrington, and on the west by the private road or way from Stanhill Ho se to the said turnpike and consisting of the several closes, pieces, or parcels of meadow and pasture land, or part or parcels thereof, and fully delineated and described in the plan thereof (No. 6) hereinafter referred to, and containing together in statute measure 25a. 0r. 31p.

Lot 7.—All that Farm and Tenement known by the name of the Higher Stanhill Farm, situate in the township of Oswaldtwisle aforesaid, on the south side of and bounded on the north by the said turnpike road leading from Blackburn to Accrington, bounded partly on the north by the said turnpike leading from Blackburn to Accrington, and partly by the highway leading from Blackburn to Little Moor End, on the east by Stanhill House and Stanhill Farm, and consisting of the farmhouse, farm and other buildings, and the several closes, pieces, or parcels of meadow and pasture land fully delineated and described in the plan thereof (No. 7), here inafter refer ed to

Lot 8.—All those Two Messuages or Dwelling hou es, and all that piece or parcel of Land or Ground (known as Hick Meadow), situate at Stanhill, within the township of Oswaldtwisle aforesaid, on the north side of the highway from Blackburn to Little Moor End, containing the whole, in statute measure, 3r 20p or thereabouts and fully delineated and described in the plan thereof (No. 8), here inafter refer ed to

Lot 9.—All that Farm and Tenement known by the name of the Salt Pie Farm, situate in the township of Oswaldtwisle aforesaid, on the west side of the high way leading from Blackburn to Little Moor End, bounded on or towards the east by the said highway, and on or towards the west by the Rushen Fold Brook, and on or towards the south west by property of John Redlish, esq and others; and consisting of the farm house, farm, and other buildings and the several closes, pieces, or parcels of meadow and pasture land, fully delineated and described in the plan thereof (No. 9), herein after referred to, and containing together 16a. 1r. 39p.

Lot 10.—All that Farm and Tenement known by the name of the Rushes Farm, situate in the township of Oswaldtwisle aforesaid, on the south west s de of the highway leading from Blackburn to Little Moor End, bounded on or towards the north by the said highway, and on or towards the south, east by Salt P Farm, on or towards the south west by part of Higher Stadvill Farm, and on the south by Smithy Brook, and property of Joseph Pickup, esq., and consisting of the farm-house, farm and other buildings, and the several close, pieces, or parcels of meadow and pasture land, fully delineated and described in the plan thereof (No. 10) hereinafter referred to, and containing together, in statute measure, 27a 1r 7p

Lot 11 All that Farm and Tenement known as part of the Higher Stanhill Farm, situate in the township of Oswaldtwisle aforesaid, on the south side of the highway leading from Blackburn to Little Moor End, bounded on or towards the north by the said highway, on or towards the south east by Stanhill House and Farm, on or towards the south west and north west by land of John Redlish esq and others, and consisting of the Farm House, Farm, and other Buildings, and the several Closes, Pieces, or Parcels of Meadow and Pasture Land, fully delineated and described in the plan thereof (No 11) hereinafter referred to, and containing together in statute measure 34a. 3r. 0p.

Lot 12 All those several Closes, Pieces, or Parcels of Meadow and Pasture Land, situate lying and being within the township of Oswaldtwisle aforesaid, known by the several names and containing (in statute measure) the several quantities following: that is to say, the Old Meadow (including the sites of Grove House, Shrubberies Plantation, Gardens, Coachhouse, Stable, Shippons, Cottages, Outbuildings and Premises hereinafter mentioned, as forming part of this lot), as 3r. 28p.; the Croft, 1a. 0r. 15p.; and the Chapel Meadow, 1a. 1r. 12p.

Also, all that modern capital Family Residence erected on part of the before-mentioned Lot 12, with the Coachhouses, Plantation, Gardens, two Stables, Shippons, Cottages, and Outbuildings connected with the Grove House and Premises aforesaid:

Grove House is a very convenient family residence, contains spacious and well proportioned dining room, drawing-room, breakfast room, seven bed rooms; numerous good and suitable bed-rooms, bath-room, water closet, &c.; kitchens, scullery, cellarage, entrance hall, and convenient staircases The several rooms have been carefully fitted up with modern conveniences and modern fixtures; the whole premises are well supplied with hard and soft water, and are replete with every convenience and appendage usually to be found in extensive family residences

The whole of the before-mentioned farms and properties are freehold of inheritance, and will be Sold subject to the reservation of the Tithes rent charge and under the several farms and properties

The tenants of the several Farms and Properties have duplicates of so much of their respective holdings, and printed particulars, with Lithographic plans of each lot, may be had on application to Messrs WESTALL BROTHERS, Church Mill, Oswaldtwisle, or on application to the Auctioneer, at his Office, No. 86, King-street, Manchester, or on application at the Offices of Messrs ROBINSON & SON, Solicitors, Blackburn; or Mr. GEO. M'CALL, Land and Engineering Surveyor, Blackburn.

Blackburn, March, 1864.

MARINE RESIDENCE, with 24 acres of Land, distinguished as Appley House, an important Freehold Property on the Coast, at Ryde, Isle of Wight With immediate possession

MESSRS. FULLER & HORSEY are instructed by the Trustees to SELL by AUCTION, at the MART, London, on WEDNESDAY, JUNE 15, 1864, at TWELVE o'clock in one lot, APPLEY HOUSES and ESTATE, an important freehold property, situate within a few minutes' walk of the pier, at Ryde, Isle of Wight, possessing many rare natural advantages as a residence of the highest class for the erection of villas, so greatly in demand in this much-admired watering-place. MARINE RESIDENCE, with 24 acres of Land, distinguished as Appley House, an important Freehold Property on the Coast, at Ryde, Isle of Wight With immediate possession

MESSRS. FULLER & HORSEY are instructed by the Trustees to SELL by AUCTION, at the MART, London, on WEDNESDAY, JUNE 15, 1864, at TWELVE o'clock in one lot, APPLEY HOUSES and ESTATE, an important freehold property, situate within a few minutes' walk of the pier, at Ryde, Isle of Wight, possessing many rare natural advantages as a residence of the highest class for the erection of villas, so greatly in demand in this much-admired watering-place. Appley being now the only land available for such a purpose with a sea view, the site is eminently suited for residences near the town of Ryde. The estate is literally within a ring fence, the northern boundary being girt by the sea, and secured by a stone wall, forming an esplanade in a line with the principal terrace at Ryde, leading to the pier. The land here, which rises precipitously, is covered with a thick wooded plantation, the ramous of which would (if declired) enable the owner to realise a large sum for the timber, without at all interfering with the privacy or views of the higher portion of the property. The surface of the land is undulating, rising to the house on the north side, sloping towards the west and south by Lower Stanhill Farm and part of Whitnash Mills, and at the north-eastern extremity by the turnpike road (separating at that point a small portion of this lot) leading from Blackburn to Accrington, and consisting of the farm-house, farm, and other buildings, and the several closes, pieces or parcels of meadow and pasture land delineated and described in the plan thereof (No 4) hereinafter referred to, and containing together in statute measure 29a. 0r. 25p.

Lot 5.—All that Farm and Tenement (formig part of the Stanhill Farm) situate in the township of Oswaldtwisle aforesaid, on the north east side of and bounded on the south west side by the turnpike-road leading from Blackburn to Accrington; consisting of the several closes, pieces, or parcels of land fully delineated and described in the plan thereof (No 5) hereinafter referred to, and containing together in statute measure 18a. 1r 20p.

Lot 6.—All that Farm and Tenement known by the name of the Stanhill Farm, with the substantial and well-accustomed Inn or Public house (known as the Spread Eagle), with the farm and other buildings thereon, situate in the township of Oswaldtwisle aforesaid, on the south side of and bounded on the north by the turnpike road leading from Blackburn to Accrington, and on the west by the private road or way from Stanhill Ho se to the said turnpike and consisting of the several closes, pieces, or parcels of meadow and pasture land, or part or parcels thereof, and fully delineated and described in the plan thereof (No. 6) hereinafter referred to, and containing together in statute measure 25a. 0r. 31p.

Lot 7.—All that Farm and Tenement known by the name of the Higher Stanhill Farm, situate in the township of Oswaldtwisle aforesaid, on the south side of and bounded on the north by the said turnpike road leading from Blackburn to Accrington, bounded partly on the north by the said turnpike leading from Blackburn to Accrington, and partly by the highway leading from Blackburn to Little Moor End, on the east by Stanhill House and Stanhill Farm, and consisting of the farmhouse, farm and other buildings, and the several closes, pieces, or parcels of meadow and pasture land fully delineated and described in the plan thereof (No. 7), here inafter refer ed to

Lot 8.—All those Two Messuages or Dwelling hou es, and all that piece or parcel of Land or Ground (known as Hick Meadow), situate at Stanhill, within the township of Oswaldtwisle aforesaid, on the north side of the highway from Blackburn to Little Moor End, containing the whole, in statute measure, 3r 20p or thereabouts and fully delineated and described in the plan thereof (No. 8), here inafter refer ed to

Lot 9.—All that Farm and Tenement known by the name of the Salt Pie Farm, situate in the township of Oswaldtwisle aforesaid, on the west side of the high way leading from Blackburn to Little Moor End, bounded on or towards the east by the said highway, and on or towards the west by the Rushen Fold Brook, and on or towards the south west by property of John Redlish, esq and others; and consisting of the farm house, farm, and other buildings and the several closes, pieces, or parcels of meadow and pasture land, fully delineated and described in the plan thereof (No. 9), herein after referred to, and containing together 16a. 1r. 39p.

Lot 10.—All that Farm and Tenement known by the name of the Rushes Farm, situate in the township of Oswaldtwisle aforesaid, on the south west s de of the highway leading from Blackburn to Little Moor End, bounded on or towards the north by the said highway, and on or towards the south, east by Salt P Farm, on or towards the south west by part

OSWALD HEAD, Hexham, the Secretary.

BIRKENHEAD INDUSTRIAL RAGGED SCHOOLS.—The Committee are desirous of receiving PLANS and ELEVATIONS for the Erection of SCHOOLS to accommodate 200 children, of whom 60 boys and 40 girls will be resident. A plan of the site and particulars of the requirements and premiums, with the terms of competition, may be obtained on application by post to the undersigned.

WILLIAM JACKSON, Jun. Honorary Secretary, Birkenhead.

TO ARCHITECTS.—The Directors of the Durham County Permanent Investment Land and Building Society hereby offer the following PRIZES for the best DESIGNS for WORKING MEN'S COTTAGES:—

FIRST PRIZE ..... 10 Guineas.
SECOND PRIZE ..... 5 „

The Cottages to contain three and four rooms respectively, and the cost not to exceed 100*l.* per Cottage. Prices of labour and materials in the county of Durham will be furnished on applicati n to the undersigned. The architects should keep in view the following qualities:—1. Accommodation; 2. Ventilation and Sanitary arrangement; 3. Style of Elevation; 4. Cost; and 5. Stability. All designs will remain the absolute property of the Society. William Croizier, Esq. C.E. County Architect; Mr. Alderman Williams, Chairman of the Sanitary Committee, Sunderland Corporation; and Mr. Joseph Ridley, Building Surveyor, have kindly undertaken to adjudicate the prizes for the two best designs. The designs are to be sent in to the General Manager, sealed and endorsed "Designs for Working Men's Cottages," on or before the 30th JUNE next, marked with a motto, and with sealed envelope containing architect's address

SAMUEL WOODHOUSE, General Manager.
Offices, 28, Fawcett-street, Sunderland, April 21, 1864.

TO ARCHITECTS.—It is intended to ERECT a WESLEYAN CHAPEL in the town of Neath, Glamorgan. The Trustees are prepared to receive DESIGNS and ESTIMATES.—For further particulars, apply to Mr. T. ANDREW, Neath.

CONTRACTS.

CITY of LONDON.—Very valuable and Extensive Building site, close to Wood-street.—The Court of Assistants of the Worshipful Company of Salters are prepared to receive TENDERS for taking a BUILDING LEASE or LEASES, for a term of 80 years, of the whole or part of all that valuable Plot of Land, containing about 14,000 superficial feet, situate close to Wood-street, Cheapside, and having frontages, to Fell-street of 120 feet, Hart-street 87 feet, and Monkwell-street 108 feet. A plan of the ground may be seen, and further particulars obtained, on application at the Clerk's Office, at the Hall, in St Swithin's Lane, Cannon street; or to the Company's Surveyor, JOHN COLLIER, Esq., 28, Finsbury-pavement, Finsbury-circus. Tenders to be addressed to EDWARD THOMPSON, Esq. Clerk of the Company, at Salters' Hall, and delivered on or before the 2nd day of MAY next, at TWELVE o'clock at noon.

TO BUILDERS.—TENDERS are required for the ERECTION of extensive STABLING, COACH HOUSES, and DAIRY BUILDINGS, about COTTAGES, LODGES, &c. in connection therewith, at Marton Hall, near Middlesbro', for M. W. F. Bockow, esq. according to plan and specification, which can be seen on application at Marton Hall; or at the Office of Mr. ROSS, Architect, Feetham, Darlington, from WEDNESDAY, APRIL 27th, until TUESDAY MAY 3rd. The various offers to be delivered at Marton Hall before TEN o'clock a.m. on WEDNESDAY, MAY 4th, 1864.

TO BUILDERS.—TENDERS are required for the ERECTION of a CHURCH in the village of Clack Wiltshire, seven miles from Chippenham. The plans and specifications may be seen and quantities obtained at my Office, or at Bradenstoke Priory, Clack, from MONDAY, the 25th inst. until SATURDAY, the 30th, both inclusive. Sealed Tenders to be delivered on or before MONDAY, the 2nd of MAY. No guarantee is given to accept the lowest or any other Tender.

CHAS. F. HANSOM, Architect
Kock House, April, 12th, 1864.

CONTRACTS.

NOTICE to CONTRACTORS.—Royal Engineer Office, Sheerness, April 8th, 1864.—TENDERS are required for PROVIDING and LAYING NEW CAST-IRON WATER-PIPES from the War Department to the various Barracks, &c. at Sheerness, a distance of 1,500 yards. A plan, showing the direction of the pipes, may be seen, and a specification, with all necessary information, be obtained on application at this Office between TEN and FOUR, from 14th to 20th instant.

The parties tendering will be required to take out their own quantities.

Tenders will not be received later than 28th APRIL instant.

The Secretary of State for War does not bind himself to accept the lowest or any Tender.

WAR DEPARTMENT CONTRACTS.—Builders and such competent persons as are desirous of undertaking the several WORKS and REPAIRS to the FORTIFICATIONS, BARRACKS, and other BUILDINGS, required by the War Department, at the places undermentioned, upon a contract for three years, from the 1st JUNE, 1864, may be furnished with every necessary information respecting the same, on personal application at the Office, for Pembroke Dock and Penally, and at the several Barrack Offices for other stations, between the hours of ELEVEN and THREE each day (Sunday excepted), until the 5th MAY, 1864, after which date no further issues will be made.

Stations for which separate Tenders will be received:—

1. Pembroke Dock, including the various Forts, Towers, and Barracks in Milford Haven
   N.B. Felt roofing will form a separate contract from the 1st April, 1865.
2. Penally Barracks and Rifle Range.
3. Newport Barracks.
4. Hubberston Barracks.
5. Cardiff Barracks.
6. Maumbles Fort and Barrack.

One Contractor only will be accepted for the whole of the trades for each of the above-named stations, but the rates of per centage at which the parties Tender may be different for each trade, at their option, but such rates must be shown in the proper place on each form of Tender.

The Tenders must be delivered on or before the 14th day of MAY, 1864, at the War Office, Pall Mall, London, addressed to "The Director of Contracts," and endorsed, "Tender for Artificers' Work" in the left hand corner of the envelope.

The Secretary of State for War reserves to himself the right of rejecting the whole or any of the Tenders.

Royal Engineer Office, Pembroke Dock, 8th April, 1864.

TO BUILDERS. — Persons desirous of TENDERING for a new OAK ROOF, and other Works, to be done at Kempston Church, may see the Plans and Specifications at the Architect's, from TEN till FIVE daily, on and after the 18th to the 30th of APRIL, on which day the Tenders are to be sent in. The lowest or any Tender will not necessarily be accepted.

Bedford, April 15th, 1864. JAMES HORSFORD, Architect.

TO BUILDERS.—Builders willing to TENDER for ANY or ALL of the undermentioned WORKS in the neighbourhood of Shrewsbury, are requested to send their names to the Architect, GEORGE EDMUND STREET, Esq. 21, Russell-square, London, W.C.:—NEW CHURCH at WITHINGTON, NEW CHURCH at WATERS UPTON, RESTORATION of the CHURCH at HIGH ERCAL, REPAIRS and ENLARGEMENT of RECTORY at UPTON MAGNA.

TO BUILDERS.—Persons desirous of tendering for the execution of Works required in ERECTING a HOUSE at Duppas Hill, Croydon, for H. Webb, esq. can see the plans and specification at my Office, on and after WEDNESDAY next. Tenders to be sent to me before TWELVE o'clock on MONDAY, the 2nd MAY next, endorsed, "Tender for a House at Duppas Hill." The lowest or any Tender will not necessarily be accepted.—JOHN BERNEY, Architect and Surveyor, Croydon.

TO BUILDERS.—Persons desirous of TENDERING for the ERECTION of works required in erecting a Tavern at Lower Sydenham, Kent, for Messrs. NALDER & COLLYER, can see the Plans and Specification at my Office on and after WEDNESDAY next. Tenders to be sent to me before TWELVE o'clock, on MONDAY, the 2nd of MAY next, endorsed "Tender for a Tavern at Sydenham." The lowest or any Tender will not necessarily be accepted. JOHN BERNEY, Architect and Surveyor, Croydon.
16th April, 1864.

FARNHAM, Surrey.—Builders desirous of TENDERING for the ERECTION of FARM BUILDINGS at Dippenhall, for Mrs. C. Paine, can see the plans and specification, and obtain any further particulars and bills of quantities, at the Office of the Architect, Mr. T. WONNACOTT, West street, Farnham, on and after the 21st instant. Sealed Tenders to be sent in not later than the 29th inst.

TO BUILDERS.—Persons willing to TENDER for the BUILDING of new SHOW-ROOMS, &c. can see the drawings and specifications at Mr. H. TURNER'S, Stoke Pottery and Works, Hanley-street, Paddington, W. up to day before SIX p.m.—Tenders to be delivered (under cover) as above, on or before the 30th instant, and the lowest will not necessarily, but will probably, be accepted.

MANUDEN CHURCH, ESSEX.—Builders are invited to TENDER for the ENLARGEMENTS and RESTORATIONS of the PARISH CHURCH of Manuden, near Bishops Stortford, and can see the drawings and specifications at the residence of Mr. W. BUSH, Manuden, and at the Office of the Architect, where bills of quantities and all information can be obtained, on and after the 16th instant. Tenders to be forwarded on or before the 30th instant, to me. No pledge is given to accept the lowest or any Tender.—By order,

THOMAS S. LANSDOWN, Architect, Malmesbury.

[For remainder of Contracts see next Page.

CONTRACTS.

BOARD of WORKS, WHITECHAPEL DISTRICT.—A meeting of this Board will be held on MONDAY, the 25th inst., at SIX o'clock in the evening, at the Office of the Board, No. 15, Great Alie-street, White chapel, to receive TENDERS for the FILLING of a New BOARD ROOM and OFFICES, at the rear of the present Offices. Plans, &c., in specification may be inspected, and forms of contract obtained, on application to Mr. FISHER, Surveyor, between the hours of TEN and FOUR, at the Office of the Board. Sealed Tenders must be delivered at the Office previously to the hour of meeting, and no Tender will be entertained unless delivered by the Board and in accordance with the terms of the printed Forms issued by the Board and signed by the person or persons tendering will be required. Persons tendering or their representatives are required to attend at a meeting of the Board. The Board do not bind themselves to accept the lowest or any Tender.

ALFRED TURNER, Clerk to the Board.

15, Great Alie-street, Whitechapel, April 20, 1864.

TO IRONFOUNDERS.—Parties desirous of TENDERING for the ERECTION of the METAL-WORK in IRON and GLASS ROOF, 62 feet span, to communicate with Mr. ALLEN MILNE, Architect, Southampton.

TO BUILDERS.—TO BE LET, the different WORKS required in the Erection of a Malt Kiln, purposed to be erected in connection with the Trafalgar-street Brewery in Manningham-lane, Bradford.—The plans and specifications may be seen at my Office, from SATURDAY, the 23rd, to SATURDAY, the 30th instant, when the estimates are to be received.

J. C. HOPE, Architect.

31, Kirkgate, Bradford.

TO STONE MERCHANTS, CONTRACTORS, and OTHERS.—The Vestry of the Hamlet of Mile-end Old Town will meet at the Vestry Hall, Bancroft-road, Mile-end-road, on WEDNESDAY, the 27th day of APRIL next, at SEVEN o'clock, p.m. precisely, to receive TENDERS for the supply of 2,000 tons of BLUE BROKEN GUERNSEY GRANITE. To be delivered pursuant to the terms of a specification, which may be seen at the Office of Mr. JAMES KNIGHT, the Surveyor, at the Vestry Hall, between the hours of TEN and ONE o'clock. The contractor will be required to enter into sureties, which may be approved and taken by the Clerk to the Vestry, at a cost not to exceed £5 and find two sureties; half the amount of his contract, for the due performance thereof. Tenders (stating names and addresses of proposed sureties, endorsed "Tender for Granite," are to be sent into my Office, before THREE o'clock in the afternoon of the day of meeting. The Vestry do not bind themselves to accept the lowest or any Tender.

THOMAS PRICE, Clerk to the Vestry.

Vestry Hall, Bancroft-road, Mile-end-road, April 14, 1864

NENE NAVIGATION (Third Division). To CONTRACTORS, EXCAVATORS, and OTHERS.—Persons willing to CONTRACT with the Commissioners of the Nene Navigation (Third Division), for DEEPENING the RIVER NENE, from Peterborough downwards, are requested to send or deliver to me, on or before WEDNESDAY, the 11th day of MAY next, sealed TENDERS for Executing the Work. Two several alternative Specifications, and two several corresponding sections of the proposed Work, may be seen on application to Mr. WM. ADAMS, Wisbech. The Tenders to be indorsed "Tender for Excavating the River Nene." The Commissioners are not pledged to accept the lowest or any Tender.—By order,

FRA. JACKSON, Clerk to the Commissioners.

Wisbech, April 14th, 1864.

NEW CHAPEL, HIGH-STREET, HUDDERSFIELD.—To BUILDERS.—Persons desirous of TENDERING for the whole or any portion of the WORKS required in the erection and completion of the above Chapel for the Methodist New Connexion, may inspect the drawings and specifications, and obtain bills of quantities at my Offices, 71, Albion-street, Leeds, from MONDAY, the 2nd, to THURSDAY, the 5th of MAY; and at the Library of the chapel, High street, Huddersfield, from FRIDAY, the 6th, to MONDAY the 9th of MAY. Tenders to be sent in to me, not later than TWELVE o'clock on TUESDAY, the 10th of MAY. The lowest or any Tender not necessarily accepted. By order,

Leeds, April 17, 1864. WILLIAM HILL, Architect.

PADDINGTON.—To STONE MERCHANTS and OTHERS.—Notice is hereby given, that TENDERS will be received by the Vestry of Paddington, for the SUPPLY of GRANITE for Paving Roads during the ensuing year, 6,000 cubic yards of broken, and 1,000 tons of unbroken; and 1,000 tons of small brown surface, hand-picked Hertfordshire or Kentish FLINTS, free from pebbles and dirt; to be delivered by the side of the Parish Wharf in the Harrow-road, free of expense, before the 25th day of MARCH, 1865.—The Tenders to be sent sealed, and directed "To the Vestry," and left at the Vestry Hall, Harrow-road, before the hour of Noon on the 2nd day of MAY next (after which no Tender will be received), endorsed, "Tender for Granite or Flints," as the case may be; and persons sending Tenders are to attend the Vestry Committee of the following morning (TUESDAY), at TEN o'clock precisely. Printed forms of Tender may be had (and none others will be received), on application to the Vestry Clerk's Office, between the hours of Ten and Four. The expenses of the contract to be paid by the Contractor. A £50 Bank of England note must be previously lodged with the Vestry Clerk as evidence that the Tender is made *bonâ fide*, the same to be returned in the case of parties whose Tender shall not be accepted; but in the case of accepted parties, to be retained until the contract is signed. The Tender must be accompanied by an acceptance by the Vestry, the deposit becomes forfeited. The Vestry do not bind themselves to accept the lowest or any Tender.—By order,

FREDK. AVELING, Vestry Clerk.

April 22nd, 1864

TO BUILDERS.—TENDERS are required for BUILDING TWO SEMI-DETACHED VILLAS, at Bexley Heath, Kent, for Mr. S. G. Richmond. Plans and specifications may be seen at the Offices of Messrs. W. GOSLING & SON, Architects and Surveyors, 82, Wellington-street, Woolwich. Tenders to be sent in on SATURDAY, the 30th inst. Mr. RICHMOND does not pledge himself to accept the lowest or any Tender.

TO BUILDERS and CONTRACTORS.—Persons desiring to TENDER for REBUILDING the PARISH CHURCH of FORDEN, near Montgomery, can inspect the Plans and Specification at the Church House Inn, in the Parish of Forden, and at the Office of the Architect, in Hereford.—Tenders are to be delivered to the Architect on the 1 th day of MAY next, and no pledge is given that the lowest will be accepted.

THOS. NICHOLSON, F.I.B.A. Diocesan Architect.

Hereford, 22nd Apl. 1864

TO BUILDERS, &c.—Notice is hereby given, that PLANS and SPECIFICATIONS for REPAIRING, RESTORING, and ENLARGING the PARISH CHURCH of St. PETER AT ASH, in the County of Surrey, close to a station on the South-Eastern Railway, will be kept at the SCHOOL-ROOM, in the village, from APRIL 28th till MAY 7th, inclusive; and all persons desirous of contracting for the above named works must send in sealed Tenders directed to Rev. J. H. CANCELLOR, Ash Rectory, Farnboro' Station, on or before MAY 14th. Neither the lowest Tender nor any will necessarily be received. The Contractor must be prepared, if required, at his own expense, to enter into the usual legal bond, with two good and approved sureties, for the due execution of the works.

LONDON, BRIGHTON, and SOUTH-COAST RAILWAY.—South London Extension to London Bridge. CONTRACT No. 2.

TO CONTRACTORS.—TENDERS for ARCHING.—The Directors of the London, Brighton, and South Coast Railway Company are ready to receive TENDERS for the execution of the Works in erecting a Viaduct, extending from Blue Anchor-road to Crucifix-lane, in the parishes of St. Mary, Newington, and St. John, Horsleydown, and adjoining the south-western side of the viaduct of the South-Eastern Railway. The plans, specifications, and approximate quantities of the works to be executed, will be ready for inspection at the Offices of Mr. FRED DALE BANISTER, the Company's Engineer, London-bridge Terminus, on MONDAY, the 18th instant; and Tenders, in the prescribed form, only, must be addressed to the Secretary, endorsed "Tender for Arching," and delivered at his Office, on or before MONDAY, the 2nd MAY next. The Directors will not be bound to accept the lowest or any Tender. FREDK. SLIGHT, Secretary.

London-bridge Terminus.

TO BUILDERS.—TENDERS are required for the ERECTION of STABLING, &c. at Brighton.—Plans and specifications can be seen, and a copy of the quantities obtained, at the Office of the Architect, Mr. W. F. HOOPER, 14, Queen-square, W.C. Tenders to be delivered not later than SATURDAY, the 30th inst. The lowest Tender not necessarily accepted.

TO BUILDERS and BUILDING SPECULATORS.—The Trustees of the Rugby Charity are prepared to receive TENDERS from Builders and others, for the EXECUTION of certain WORKS in forming the ROADWAY of a new Street or Communication, between Oxford and New Millman-street; and also for Taking in Repairing Lease certain Houses; and also on Building Lease a Plot of Ground adjoining, having a frontage of about 60 or 70 feet. The Trustees do not bind themselves to accept the lowest or any Tender. Plans and specifications may be seen, and information obtained, at the Office of Messrs. ILIFFE, RUSSELL, & ILIFFE, 2, Bedford-row, Holborn.

TO BUILDERS.—Persons desirous of TENDERING for the EXECUTION of WORKS, required in the ADDITIONS and ALTERATIONS to the HORSESHOE TAVERN at Croydon, for Mr. J. Bull, can see the plans and specification at my Office, and after WEDNESDAY next. Tenders to be sent to me before TWELVE o'clock on MONDAY, the 2nd MAY next, indorsed "Additions to the Horseshoe Tavern." The lowest or any Tender will not necessarily be accepted.

JOHN BENNEY, Architect and Surveyor, Croydon.

16th April, 1864.

TO BUILDERS.—Persons desirous of TENDERING for the ERECTION of a NEW MORAVIAN CHAPEL, at Bedford, may see the plans and specifications at the Architect's Office, from TEN till FIVE daily, up to the 27th of APRIL, on which day the Tenders are to be sent in. The lowest or any Tender will not necessarily be accepted.

Bedford, April 13, 1864. JAMES HORSFORD, Architect.

BOROUGH of SOUTHAMPTON. — To IRONFOUNDERS and OTHERS.—Notice is hereby given, that the Local Board of Health for Southampton are prepared to receive TENDERS from any person or persons willing to enter into a Contract for SUPPLYING and FIXING proper IRON FENCING, about 5,500 lineal yards in length, for the garden fronts around the Common fields in Southampton. The Local Board of Health consider advisable that the parties Tendering should submit their own designs and specifications for supplying and fixing such fence. They, however, suggest a design suitable for the purpose. Lithographic plans, showing the roads to be fenced, and a general outline of the fence suggested, and all further particulars, can be obtained upon application to me or to Mr. S. G. POOLE, Surveyor to the Local Board of Health, Southampton, on and after MONDAY, the 25th instant. Sealed Tenders, accompanied with designs and specifications, must be left at my Office, on or before MONDAY, the 9th day of MAY next. No pledge is given to accept the lowest or any other Tender.—By order,

CHARLES E. DEACON, Clerk.

Public Health Office, Southampton, April 13th, 1864.

TO BUILDERS.—Persons willing to TENDER for the ERECTION of NEW CORN STORES to Aldermaston Mill, Berks, may see the plans and specifications at my Office on and after MONDAY, the 25th APRIL. Tenders to be delivered to me not later than FOUR o'clock on SATURDAY, the 30th. The lowest or any Tender will not necessarily be accepted

164, Friar-street, Reading. CHARLES SMITH, Architect.

NEW VICARAGE HOUSE. — Persons willing to CONTRACT for the ERECTION of the NEW VICARAGE HOUSE of LLANBADARN-FAWR, near Aberystwyth, may see the plans and specifications at the Black Lion Inn, Llanbadarn Fawr. Tenders to be sent in to the Rev. JOHN PUGH, Vicar, by the 30th of APRIL.

W. BUTTERFIELD, Esq. Architect.

BLACKHEATH and GREENWICH.—The Trustees of Morden College are prepared to receive TENDERS for REPAIRING LEASES for several HOUSES on Blackheath-hill.—For information, apply to Messrs. SMITH & WILLIAMS, Architects and Surveyors, Frederick's-place, Old Jewry, E.C.

TO SCAVENGERS, CONTRACTORS, and OTHERS.—The Commissioners of Sewers of the City of London will meet in the Guildhall of the said City, on TUESDAY the 3rd of MAY next at Guildhall aforesaid TWELVE o'clock precisely, to receive TENDERS for CLEANSING the STREETS, and for Removing Dust, Ashes, &c. from the Houses of the Inhabitants; and also for Watering certain streets within the said City for the term of One Year from Midsummer-day next, agreeably to specifications, copies of which may be had at this Office. The City is divided for the purposes of these Contracts into four districts, and the Contractor will be required to enter into bond, with two approved sureties, in the sum of £200 for each Division for Cleansing, and for £80 each Division for Watering, for the due performance of the same. And no Tender without the consent in writing of the parties proposed as such sureties, must be enclosed with the Tenders. The Commissioners do not undertake to accept the lowest Tender in any case; nor, unless deemed satisfactory. No Tender will be received after TWELVE o'clock on the day of treaty; nor will any Tender be received unless it contains enclosed the sum of £20 in Bank of England notes, for each Tender; for, in evidence that the same is made bonâ fide, which sum of money will be returned to each person whose Tender is not accepted; it will be retained in the event of the Tender being accepted, and shall have been duly executed by the parties Tendering and their sureties; and in case of such contracts and bond not being duly executed the said sum of money will be retained by and vested in the said Commissioners.

JOSEPH DAW, Principal Clerk.

Sewers Office, Guildhall, 19th April, 1864.

MONAGHAN and CAVAN LUNATIC ASYLUM.—Builders are invited to TENDER for the ERECTION of BOUNDARY WALLS, GATE PIERS, &c. to enclose the site of the above Asylum Grounds, the plans and specifications of which may be seen at the Office of the Architect, Mr. MCURDY, 1, Harcourt-place, Lower Merrion street, Dublin; and at the Office of Mr. HARRY ROGERS, Monaghan, Secretary to the Committee. Tenders are to be lodged with the secretary, Board of Control Lunatic Asylums, Dublin Castle, on or before the 21st day of MAY next, and endorsed "Tender for Boundary Walls for Monaghan and Cavan Lunatic Asylum." Security will be required for the due performance of the Works. The Board of Control do not bind themselves to accept the lowest nor any of the Tenders.

2nd April, 1864.

MONAGHAN and CAVAN LUNATIC ASYLUM.—Competent persons are invited to TENDER for SINKING a WELL on the site of the above Asylum Grounds at Monaghan, the specification of which may be seen at the Office of the Architect, Mr MCURDY, No. 1, Harcourt-place, Lower Merrion street, Dublin; and at the Office of Mr. HARRY ROGERS, Secretary to the Committee, Monaghan. Tenders must be lodged with the Secretary Board of Control, Dublin Castle, on or before the 21st day of MAY next, and endorsed "Tender for Sinking Well for Monaghan and Cavan Lunatic Asylum." Security will be required for the due performance of the Works. The Board of Control do not bind themselves to accept the lowest nor any of the Tenders.

2nd April, 1864.

MONAGHAN and CAVAN LUNATIC ASYLUM.—NOTICE to BUILDERS.—Builders are invited to TENDER for the ERECTION of a LUNATIC ASYLUM at Monaghan, according to the plans and specifications, which can be seen at the Office of Mr. JOHN MCURDY, No. 1, Harcourt-place, Lower Merrion street, Dublin, until the 1st day of MAY next. Builders who purpose Tendering are requested to signify their intention by sending letter addressed to the Architect, on or before the 16th day of MAY next, and to name a Surveyor in case the selection of whom will depend on the majority of votes. Two Sealed Tenders are to be sent in by the Architect to open the letters. The Tenders to be left with the Secretary of the Board of Control Lunatic Asylums, Dublin Castle, endorsed "Tender for Monaghan and Cavan Lunatic Asylum," on or before NOON of the 30th day of JUNE next. The Board of Control do not bind themselves to accept the lowest nor any of the Tenders. The work to be commenced immediately after the acceptance of the Tender. Security will be required for the due performance of Contracts.

Office of Control Lunatic Asylums, Dublin Castle,
2nd April, 1864.

WEST HAMPNETT UNION, SUSSEX. The Guardians of this Union having decided on a GENERAL FIELD VALUATION of the Rateable Hereditaments in the Union, for the purposes of the Parochial Assessment Act, TENDERS for the PERFORMANCE of the above Work are requested, subject to the following regulations:—1. The Union will be divided into Five separate Districts, comprising the following Parishes—

DISTRICT 1.

	Area in Statute Acres.
Birdham	1,948
West Itchenor	782
West Wittering	3,645
East Wittering	1,605
Earnley	1,182
Sidlesham	4,189
Selsey	4,214
Total	17,455

DISTRICT 2.

Pagham	4,376
Hunston	1,043
North Mundham	1,882
Donnington	1,029
Appledram	1,197
New Fishbourne	610
Rumbold's Whyke	645
Merston	710
Total	11,452

DISTRICT 3.

Burnham	740
Felpham	2,254
Middleton	859
Yapton	1,930
Bristol	1,665
Slindon, including the Gumber	2,504
Madehurst	1,568
Walberton	1,722
Eastergate	912
Total	13,674

DISTRICT 4.

Aldingbourne	3,009
Eastham	1,504
Boxgrove	3,076
West Hampnett	1,399
Oving	2,346
Tangmere	774
East Lavant	2,884
Total	16,752

DISTRICT 5.

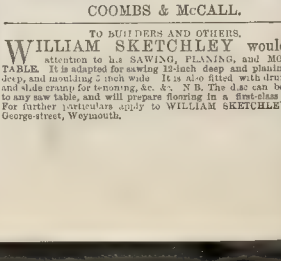
Mid Lavant	330
West Stoke	880
Binderton	1,790
Singleton Parish	5,010
Singleton	
Charlton	
East Dean	4,647
Up Waltham	1,245
Graffham	1,658
Total	15,580

2. No Valuer will be eligible to act for more than one of the above districts, and no gentleman will be eligible for the appointment of Valuer of the district in which he is an owner or occupier of land.

3. Tenders are to be delivered on or before JUNE 1st, 1864, to Mr. R. G. RAPER, of Chichester, Clerk to the Assessment Committee, from whom all information can be obtained.

TO BUILDERS. — Persons desirous of CONTRACTING for the ERECTION of SCHOOL BUILDINGS at Adisham, in the county of Kent, may see the plans, &c. by application to the Rev. H. MONTAGUE VILLIERS, at the Rectory, Adisham, on and after MONDAY, 25th inst. Tenders to be sent to the Office of the Architect, Mr. CHRISTIAN, 8A, Whitehall-place, London, S.W. on or before MAY 9th.—The committee do not bind themselves accept the lowest Tender.

TO BUILDERS. — SCHOOL for DAUGHTERS of OFFICERS of the ARMY, LANSDOWN-HILL, BATH.—Persons desirous of SUBMITTING TENDERS for the ERECTION of NEW WING, and carrying out certain alterations and additions to the school building (lately known as the Lyceum Or College, Bath), are requested to send their names and references to the Honorary Architect.—WILLIAM G. HABERSHON & PITE, 38, Bloomsbury-square, W.C.



TO BUILDERS, &c.—Notice is hereby given, that plans and specifications for RESTORING, ALTERING and ENLARGING the PARISH CHURCH of ST. MARY'S, at Ryhill (two miles from the Weybridge Station), will be hung at the National Schoolroom, from MONDAY, APRIL 25th to SATURDAY, the 30th, both inclusive; and all persons desirous of contracting for the execution of the works must send in sealed Tenders directed to Rev. NEWTON J. SPICER, Rectory, Weybridge, Surrey, on or before TUESDAY, the 10th of MAY next evening. Neither the lowest nor any Tender will necessary be accepted. The Contractor, if required, must be prepared with two good and approved sureties, to enter into the usual legal bond for the due fulfilment of his contract.

THE BOARD of WORKS for the PLUMSTEAD DISTRICT TO SEWER CONTRACTORS, BUILDERS, and OTHERS. Those persons desirous of submitting TENDERS for LAYING DOWN and CONSTRUCTING about 510 feet run of HALF-BRICK SEWER, 24 by 18 in the clear, in and upon Belmont-hill, Lee, within the said District, are requested to deliver the same at or before FIVE o'clock upon the afternoon of THURSDAY, the 5th day of MAY next, at the Office of Mr. F. E. THORNE, 11, Lee-road, Lee, Surveyor, where the Plan and Specification of such works may be seen, and all further particulars may be obtained. The lowest or any other Tender will not necessarily be accepted.—By order,

CHARLES AUGUSTUS SMITH, Clerk to the Board.

Crooms-hill, Greenwich, 14th April, 1864.

DOVER FOUNDRY and IRON WORKS, STAPLE STREET, BOROUGH, S.E.

Girders, Wrought.
Ditto, Cast.
Columns.
Tanks.
Railings.
Staircases.
Machine Castings.
Roofing.

All kinds of Cast or Wrought Iron Work estimated or designed.

HOISTS FITTED UP.

COOMBS & McCALL.

TO BUILDERS AND OTHERS.

WILLIAM SKETCHLEY would call attention to his SAWING, PLANING, and MOULDING TABLE. It is adapted for sawing 12-inch deep and planing 11 inch deep, and moulding 5 inch wide. It is also fitted with drunken saw and slide cramp for tenoning, &c. &c. N.B. The dado can be applied to any saw table, and will prepare flooring in a first-class manner. For further particulars apply to WILLIAM SKETCHLEY, Great George-street, Weymouth.

TO ARCHITECTS AND BUILDERS, RAILWAY CONTRACTORS, &c.

MANUFACTURER OF WROUGHT-IRON GIRDERS
Designed and Guaranteed as to Strength.

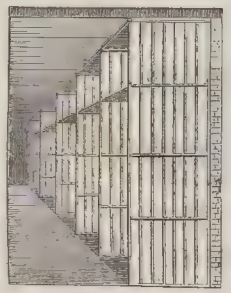
AND EARTH WAGGONS COMPLETE.



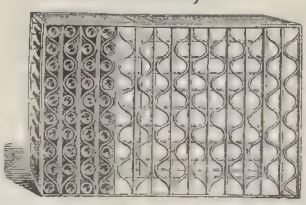
CAST-IRON RAILWAY CHAIRS, WROUGHT CHAIR-SPIKES, FISH-BOLTS, AND RAILWAY STORES.

MATTHEW T. SHAW, 64, CANNON STREET, LONDON BRIDGE, E.C.
Orders requiring Despatch and Punctuality can be executed in a few days.

WROUGHT IRON WINE BINS.

FARROW & JACKSON
Beg to call the attention of Architects and Builders to their Wrought Iron Wine Bins, which are ADAPTED (as shown) either for BRICK ARCHED VAULTS or CELLARS with FLAT CEILINGS, the mode of fixing in either case being so simple, that they may be put up by any ordinary workman. They combine great strength with lightness and economy of space, and their DURABILITY has been satisfactorily PROVED DURING nearly FORTY YEARS.

The Shelves are formed of Plates of Iron laid on Bars, which rest on the Cross-bars of the Lattice Uprights, and are removable at pleasure.



Plans and Estimates furnished, and Cellars fitted complete in any part of the Kingdom.

*** As these Bins were the invention of the late Mr. FARROW, and great attention has been given to them by the present Firm, long practical experience enables FARROW & JACKSON to offer the best advice as to arrangement.

ALSO THEIR

NEW REGISTERED IRON BINS,

Made any size or shape, to fit any spare corner, with
SEPARATE REST FOR EACH BOTTLE,
Peculiarly adapted for Private Cellars.
No laths are required, and all trouble of Binning is avoided. The Cellular Bins may also be had fitted with light lattice doors, affording perfect security to the contents of the Bin.

FARROW & JACKSON,
8, 17, and 16, GREAT TOWER STREET; and
1, HARP LANE, LONDON, E.C.
FACTORY, 57 and 58, MANSELL STREET.

J. B. SCAMMELL & CO. (late Thomas Pugh & Co.)

BUILDINGS AND SHIPS EFFECTUALLY SECURED AGAINST LIGHTNING.

PATENT LIGHTNING CONDUCTORS,

according to the system of Sir Snow Harris, F.R.S. as now universally adopted in every department of the Public Service, supplied and carefully fitted in every detail, under the immediate instructions of Sir Snow Harris, by G. W. GRAY, who has effectually secured a large number of ships, public buildings, and magazines against the destructive agency of lightning, including the Houses of Parliament, new Barracks, Admiralty, Horse Guards, Offices of the War Department, and many churches and other important structures. Buildings surveyed, and plans and estimates submitted, if called for.
J. W. GRAY & SON, 114, Fenchurch-street, E.C.

LIGHTNING CONDUCTORS.

R. S. NEWALL & CO. Patentees of the COPPER ROPE LIGHTNING CONDUCTOR, supply the same, with the point and all staples, complete for fixing, at the following prices:—

Three-eighths-inch diameter	1s.	0d. per foot.
Half-inch diameter	1s.	6d. "
Five-eighths-inch diameter	2s.	0d. "

R. S. Newall & Co.'s Patent Copper Rope Lightning Conductor is being applied by architects, engineers, and scientific men, in all parts of the world.

Offices—130, Strand, London.

BY APPOINTMENT TO H.R.H. THE PRINCE OF WALES.

BARTON'S PATENT PRIZE MEDAL STABLE FITTINGS.

These SUPERIOR-CLASS STABLE FITTINGS are PATRONIZED by the PRINCIPAL NOBILITY, and ADOPTED by many of the FIRST ARCHITECTS and BUILDERS of the United Kingdom.

BY APPOINTMENT TO H.R.H. THE PRINCE OF WALES.

J. BARTON, having entered upon the extensive Premises, No. 370, Oxford-street, adjoining his Patent Stable Fitting Manufactory, begs to solicit attention to his large and well-selected STOCK of STALL and LOOSE BOX FITTINGS, HARNESS ROOM REQUISITES, &c.; also to invite inspection of the newly-erected Practical Stable, now on view. Illustrated Catalogues on receipt of Four Stamps.

JAMES BARTON, IRON WORKS, 370, OXFORD STREET, LONDON, W.

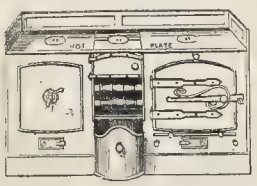
EXHIBITION PRIZE MEDAL, 1862, AND MEDAL OF ROYAL AGRICULTURAL SOCIETIES OF ENGLAND AND IRELAND.

MUSGRAVE'S PATENT STABLE and HARNESS FITTINGS.

MUSGRAVE'S PATENT HARMLESS LOOSE BOXES.

MUSGRAVE'S PATENT IRON COW STALLS and PIGGERIES.

Architects who have not seen these fittings are requested to write for engravings, as they are unlike those of any other maker, and were admitted to excel all the work of their class in the Exhibition.



They can be seen in first-class stables in almost every county in England; and MUSGRAVE, BROTHERS, are now fitting several very large establishments under direction of London architects, noted for employing only what is the best of its kind.

Musgrave's Patent Slow-combustion Stove

Is the nearest approach to Warming by Hot Water. It will burn in churches from Saturday till Sunday evening, without attention during the hours of worship. In halls will burn day and night for weeks, with little care. Capable of warming a large apartment for twenty-four hours, at a cost of 2d.; and deserving of special attention because of its safety, healthfulness, durability, and extreme simplicity.—For full particulars apply to

MUSGRAVE, BROTHERS, Ann-street Ironworks, Belfast.

THE LEAMINGTON PRIZE KITCHENER.

These Ranges are strongly recommended for Economy, Cleanliness, and a Cure for Smoky Chimneys.

The Top forms an entire and efficient Hot Plate, and having an Open Fire, removes all the objections of a Close Fire-range.

A large STOCK of SELF-ACTING and other RANGES, REGISTER STOVES, and every description of BUILDERS' IRONMONGERY, at Wholesale Prices.

All Goods delivered free within Five Miles.

BURT & POTTS,

WHOLESALE AND MANUFACTURING IRONMONGERS,

BROWN & GREEN'S

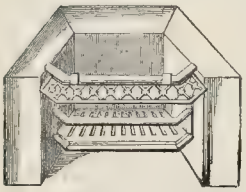
PATENT KITCHEN RANGES.

PRIZE MEDAL, 1862.

These Ranges combine the latest improvements with great simplicity and durability. They afford facility for roasting meat in front of the fire without interruption to the action of the oven, hot plate, boiler, &c. The Ovens are well ventilated, and perfect either as roasters, or for baking bread or pastry. For Efficiency, Economy, and Ventilation, and

CURE OF SMOKY CHIMNEYS,

these Ranges are unequalled. They are of all sizes and prices; and when fitted with Bath and Steam Apparatus, &c. they form the most complete appointment for good establishments. Designs, &c. may be had on application at THE LONDON WAREHOUSE,



72—74, BISHOPSGATE STREET WITHIN.

"One of the best arrangements of the 'Kitchener.'"—See *Builder*, Sept. 6, 1862.

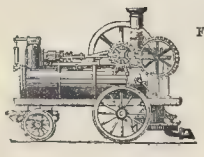
EDWARDS & SON,

STOVE GRATE & KITCHEN RANGE MANUFACTURERS,

No. 49, GREAT MARLBOROUGH STREET, REGENT STREET, LONDON.

THE DENNETT ARCH.



Allowed to be the cheapest fireproof construction known, and used with the greatest success for the last ten years in the Midland Counties, and has been adopted by G. G. Scott, esq. for the New Foreign Offices, used in any form of arch, groin or dome; turned to any length, width, or height, forming a perfect floor and ceiling in one mass, from 2½ inches in the crown to any required thickness.

Address to the Patentees,—A. & R. DENNETT & CO. NOTTINGHAM.

TESTIMONIAL.—"I have made use of Messrs. Dennett & Co.'s material for Fireproof Arching, and though I have, happily, had no practical experience of its efficiency as against fire, I can bear witness to its strength, and its extreme convenience of application. I have made use of it in positions in which I should have found it difficult to introduce any other fireproof material, and it has this advantage, that the arches constructed of it are so entirely in one mass that they cover the space like a compact shell or inverted basin, and are, consequently, almost wholly free from lateral pressure.

"GEO. GILBERT SCOTT, 20, Spring Gardens London."

SMOKY CHIMNEYS.

S. DEACON

Respectfully invites the attention of Architects Builders, &c. to his

PATENT LOUVRE CHIMNEY CAP,

which has been in use some time with perfect success, many curing chimneys where other caps have been of no avail.

The advantages attending this Cap are—it can be thoroughly cleaned by the machine when the chimney is swept, the brush being able to pass through the Cap without the liability of misplacing it; an increased up current, and the impossibility of a down one.

Prospectus, with testimonials, forwarded on receipt of Postage Stamp, by

THE TIVIDALE COMPANY, LIMITED

(Late JOHN H. PORTER & CO. of the Ebro Works, Tividale, and late of Birmingham),

Are prepared to undertake the MANUFACTURE and CONSTRUCTION of

ALL KINDS OF WROUGHT AND CAST IRON WORK.

The class of work contracted for and manufactured by the late Firm has consisted chiefly of Iron Bridges (among others the Lambeth Suspension Bridge in London),

Iron Roofs, Sheds, Stores, and Lighthouses; Iron Columns, Girders, and Fire-proof Floors;

Smiths', Founders', and Boiler-makers' Work generally.

The Works at Tividale, near Dudley, are situate in the heart of the Iron and Coal District of South Staffordshire, and thus conveniently placed for delivery to the several shipping ports—London, Liverpool, Hull, Gloucester, and Bristol.

The Messrs. PORTER continue their personal superintendence, as Managing Directors, in London and at Tividale; and it is hoped that the Company will enjoy a continuance of those favours hitherto so liberally extended to the late Firm.

Chief Office—7, St. Mildred's Court, Poultry, London, E.C.

MANTEL PIECES, ENGLISH AND FOREIGN,

IN EVERY VARIETY OF DESIGN AND COST,

Have been added to their LARGE and EXCELLENT ASSORTMENT of FINE FINISHED STOVES FENDERS, &c. in the NEW SHOW ROOMS of the

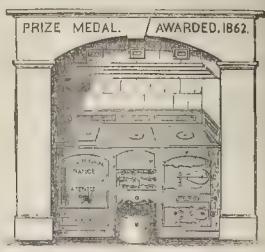
GENERAL IRON FOUNDRY COMPANY (LIMITED),

At No. 43, UPPER THAMES STREET, LONDON.

By an arrangement with Mr. WILLIAM POTTS, of Birmingham, the Company have the exclusive Right of Sale of his ART MANTELS in the London District. These Works are of the HIGHEST EXCELLENCE in DESIGN and FINISH, very beautiful, and durable. They also beg to call special attention to the beautiful and varied productions in ART BRONZES and METAL WORK, adapted for ARCHITECTURAL and CABINET DECORATION, MURAL MONUMENTS, &c now on view in their Rooms. Also to the following Articles of their Manufacture, viz.

PATENT WROUGHT IRON WINDOWS,

Strong, light, durable, easily fixed, cheap, and free from risk of breakage.



BILLING'S PATENT CHIMNEY THROATS AND AIR APPARATUS.

Most effective for the Cure of Smoky Chimneys.

FIRST-CLASS COOKING APPARATUS,

For Club Houses, Hotels, Restaurants, &c.

PATENT WORCESTERSHIRE RANGE.

PRIZE MEDAL 1862, AWARDED FOR EXCELLENCE.
The above RANGE is most complete, and strongly recommended for its unrivalled ECONOMY, CLEANLINESS, CONVENIENCE, DURABILITY, and is a certain CURE for SMOKY CHIMNEYS.
It is an entirely new invention, and consists of large MEAT ROASTER, PASTRY OVEN, and WROUGHT IRON BOILER. The top forms a HOT PLATE for BOILING, STEWING, &c. The whole heated by ONE SMALL FIRE. One 5 feet wide is equal to an ordinary Range 8 feet wide.
Extracted from the "London Daily Telegraph," May 19th, 1862.
"INTERNATIONAL EXHIBITION, Class 31.
"Of the most recent inventions it should be said that Messrs. JONES & ROWE'S Patent Worcestershire Range has attracted very special attention, and has been commended by the best authorities. A valuable peculiarity of their Ranges is the placing of the OVEN and ROASTER one above the other instead of *side by side*; and the ROASTER is constantly replenished with fresh air."

Manufacturers of Gas Chandeliers Glass Lustres, &c. &c.

THE FURNISHING OF BED-ROOMS

HEAL & SON have observed for some time

that it would be advantageous to their Customers to see a more large selection of Bed-room Furniture than is usually displayed, and the large property recently added to the different descriptions of Furniture, it is necessary that each description should be placed in separate rooms. They have therefore erected large and additional Show-rooms, by which they are enabled not only to extend their show of Iron, Brass, and Wood Bedsteads, and Bed-room Furniture, beyond what they believe has ever been attempted, but also to provide several small rooms for the purpose of keeping complete suites of Bed-room Furniture in the different woods.

Japanned Bed Goods may be seen in complete suites of three or six different colours, some of them light and ornamental, and others of a plainer description. Suites of Stained Deal (called Polished Deal), Oak, and Walnut, are also set apart in separate rooms, so that customers may be able to see the effect as it would appear in their own rooms. A suite of very superior Solitte Oak Furniture will generally be kept in stock, and from time to time new and select Furniture in various woods will be added.

Bed Furniture are fitted to the Bedsteads in large numbers, so that a complete assortment may be seen, and the effect of any particular pattern ascertained as it would appear on the Bedstead.

A very large Stock of Bedding (HEAL & SON'S original trade) is placed on the BEDSTEADS.

The Stock of Manufactory Goods for the better Bed-rooms, as Japanned Goods for plain and Servants' use, is very greatly increased. The entire Stock is arranged in 4 Bed-rooms, six Galleries (each 120 feet long), and two large ground floors, the whole forming as complete an assortment of Bed-room Furniture as they think can possibly be desired.

Every attention is paid to the manufacture of the Cabinet-work, and they have just erected large Workshops on the premises for this purpose, that the manufacture may be under the most immediate care.

Their Bedding trade receives their constant and personal attention, every article being made on the premises.

They particularly call attention to their Patent Spring Mattress, the Sommier Elastique Portatif. It is portable, durable, and elastic, and of certain price than the old Spring Mattress

HEAL & SON'S ILLUSTRATED CATALOGUE of Bedsteads, Bedding and Bed-room Furniture sent free by Post.—196, 197, 198, Tottenham Court-road, London.

A PRIZE MEDAL for SUPERIOR LOCKS

was awarded to J. H. FOR SUPERIOR DESIGN AND WORKMANSHIP.

CEILING FLOWERS,

PANEL DECORATIONS, TRUSSES, CAPS, &c. IN PAPIER MACHE AND CARTON PIERRE.

WILLIAM WHITE,

49 and 50, Great Marylebone Street, London, W.

NEW DESIGNS FOR CEILING FLOWERS SENT ON APPLICATION.

SPECIAL DESIGNS
FOR THE
DECORATION OF
PUBLIC AND PRIVATE BUILDINGS
SUPPLIED WITHOUT CHARGE.

THE LAND SECURITIES COMPANY

(Limited).
Capital, 2,000,000*l.*
DIRECTORS.

His Grace the Duke of Marlborough, President.

The Directors of the International Financial Society (Limited), acting as a Finance Committee.

John Eouis, esq. M.P.
Sir James Ferguson, Bart. M.P.
Col. Fulke Southwell Greville, M.P.
Sir John Charles Dalrymple Hay, Bart. M.P.
James Mackie, esq. M.P.
Sir Laurence Palk, Bart. M.P.
Sir Henry Strakey, Bart. M.P.
William Dargan, esq.
Henry Farquhar, esq.
Sir John Gray.
Henry Kingscote, esq.
John Hurst, esq. Lloyd, esq.
Hon. William Napier.
Hon. Henry Petre.
Sir Charles Rich, Bart.
Philip Twells, esq.

OFFICES.—Chief Office, West End, 32, Charing-cross, S.W.; Branch Office, East End (54, Old Broad-street, E.C.), Office of International Financial Society.

The Company will make advances, repayable with interest, at fixed terms, or by instalments, or by terminable annuities, upon the security of—

1st. Of landed estates, first-class house property, and real property of all descriptions and tenures, and of all estates and interest therein.

2nd. Of rates, dues, assessments, and impositions of all descriptions, raised or imposed by or under the authority of any Act of Parliament, public or private, Royal Charter, Commissions of Sewers, Drainage, or other sufficient legal authority.

3rd. Of charges and securities of all descriptions upon or affecting landed estates, and all real property and tenures, made, given, or issued, under the authority of any Act of Parliament, public or private.

Temporary advances will be made on landed estates, and on houses in course of erection, with or without the deposit of title deeds; and they undertake the negotiation of permanent investments.

For further information, and forms of application, apply to the Hon. WILLIAM NAPIER, Managing Director, the Land Securities Company (Limited), 32, Charing cross, London, S.W.

THE PROVIDENT CLERKS' MUTUAL

LIFE ASSURANCE ASSOCIATION. Established 1840.

TRUSTEES.

Thomas Barring, esq. M.P.
Thomson Hankey, esq. M.P.
Wm. George Prescott, Esq.
Baron L. N. DeRothschild, M.P.

The Report and Balance-sheet presented at the 23rd Annual Meeting, on the 3rd February, showed the following results:—

The income for 1863 was	£59,750
The accumulated fund amounted to	221,593
The claims paid since the foundation of the Association, in 1840, amount to	126,000
The cash bonus at the recent quinquennial division was	30,000

The Reports and Balance-sheets of this Association may be had by any person, whether a member or otherwise, on application at the Chief Office, 18, Moorgate-street, E.C.; or of the Agents to the Association.

April 9, 1864. WM. THOS LINFORD, Secretary.

£1,000 IN CASE OF DEATH,

or an Allowance of 6*l.* per week while laid up by injury caused by

ACCIDENT OF ANY KIND,

Whether Walking, Riding, Driving, Hunting, Shooting, Fishing, or at Home, may be secured by an Annual Payment of £3 to the RAILWAY PASSENGERS' ASSURANCE COMPANY.

MORE THAN 8,400 CLAIMS FOR COMPENSATION
HAVE BEEN PROMPTLY AND LIBERALLY PAID

For particulars apply at the Offices, 10, REGENT-STREET, and 64, CORNHILL. WILLIAM J. VIAN, Secretary.

PENCILS, BLACK LEAD, and COLOURED CHALKS.

A. W. FABER'S POLYGRADE LEAD PENCILS.
Sole Agents, HEINTZMANN & BOCHUSSEN, 3, Friday-street, E.C.
SOLD BY ALL STATIONERS AND ARTISTS' COLOURMEN.

MONEY.—IMMEDIATE CASH

ADVANCES on FREEHOLD and LEASEHOLD PROPERTY, REVERSIONS and ANNUITIES,
WINE, SPIRIT, and TIMBER WARRANTS,
FURNITURE, SHARES, &c.
Mr. RICHARD CROSSLEY, 17, Moorgate-street, Bank, E.C.

TEN THOUSAND POUNDS READY TO

BE ADVANCED by the TEMPERANCE PERMANENT LAND AND BUILDING SOCIETY, on Freehold or Leasehold Property, for any period of years not exceeding fifteen, the mortgage being redeemable by equal monthly instalments. Interest (in addition to a small premium), 5 per cent. on the balance each year.—Apply to HENRY J. PHILLIPS, Secretary.
Offices, 34, Moorgate-street, London, E.C.
NOTE.—More than a quarter of a million pounds sterling have been advanced upon house property alone.

MONEY on FREEHOLD and LEASEHOLD PROPERTY, by the

MUTUAL LOAN FUND ASSOCIATION
(Incorporated by Act of Parliament, 1850), 14, RUSSELL STREET, Covent Garden, W.C. Advances from £50 to £5,000, upon Freehold and Leasehold Property for any term up to ten years. Mortgages redeemed, and the advance can be repaid by easy instalments. Facilities afforded to tenants to purchase the houses they occupy, and the repayment of the advance taken as rent. Greater advantages are offered to borrowers than in building societies, there being no shares to subscribe for, or competition for an advance, and no deduction from the loan. No preliminary fees. Prospectus and forms of proposal sent on receipt of a directed stamped envelope.
EDWARD HARPER, Secretary.

LADDERS.—TO BE SOLD, TWO Long

LADDERS, one 73 round, the other 50 round, painted, and new last year. Price, 4*l.* 10*s.*—Apply at Bessborough Library, Rosehampton-street, Vauxhall Bridge, Pimlico, S.W.

The Builder.

VOL. XXII.—No. 1107.

The Designs for proposed Museums, South Kensington.

WHETHER the buildings for Government Offices, now in progress on the site between Downing-street and St. James's Park, be regarded as a successful issue of the competitions of 1857, to the extent of their division of the entire project, or as themselves not promising to be characterized by that small element of invention, without either *bizarrerie* or caricature, which art ever requires in new structural work, and which might be all that we should desire; this much is plain, that altogether the results have been disproportionate to the comprehensiveness of the original programme of 1856,—which was based upon conclusions that are now cast aside, or widely departed from, as to the wants of the departments,—and are disproportionate to the pains which architects were induced to take, as also to the merit of the designs that were received in 1857. The exhibition of that year, in Westminster Hall, is to be regarded as having been formed from two competitions, if not three, or even more. Architects were invited to send in a "block plan" showing general arrangement of the whole number of offices, and disposition of surrounding streets and routes of access, only keeping within a certain boundary for the offices generally, and placing the War Office and the Foreign Office on a site corresponding as to its northern, southern, and eastern boundaries, with the actual site of the Foreign Office and the India Board buildings which are now in progress. But the question of such arrangement was unavoidably mixed up with that of Westminster Bridge, and that of proposed routes which it was necessary to regard extending to considerable distance. Thus, even the part of the programme involved questions, the solutions of which could not be exhibited without a plan of a considerable portion of London, as well as the "block plan," by each competitor, and also could not without consideration of the detailed planning of each office. As to the particular offices at the time intended to be commenced immediately,—and for which the exact site was shown,—architects might compete for them by detailed drawings, or might confine their attention to the "block plan;" or they might send in drawings for one of the two offices only. In short, architects disposed to accept the invitation to compete, had several courses open to them; and it was gravely calculated by the Office of Works, that the liberty of choice, and the preparation of "block plan," Foreign Office design, and War Office design by different hands, would result in a perfect fitting together of the designs of three persons, in default of the fortuitous circumstance of the three first premiums being accorded to the same individual. The result was that which had been expected by every one not of the Department, premiums were awarded to designs which could not work together; and the chief result of the competition, apart from its having made one or two individuals better known, may be that the improvement of London street-communications, which has from several causes received *impetus*, allows us to recognise as approaching formation, some of the lines of route which were indicated on plans; though the bulk of the suggestions of 1857 were cast aside, after we believe having been scarcely looked at. The whole management, however, of these competitions, and of the competition for the Wellington Monument in St. Paul's Cathedral, was bad enough to prevent success from any future announcements on the part of Government.

This at least architects have been able to satisfy themselves about,—and we have shown,—that it is not to their interest to accept the invitation to any competition, unless their designs will be exhibited, and much better as to the arrangement, and for longer period of time, than the drawings are exhibited generally, or than they can be without ample space; unless the competitors have the option of affixing their names; and unless the designs are judged of by professional architects altogether, or forming the majority of the judges, and unless these take more pains than generally, and are able to give themselves time which might deserve to be paid for even at a much higher price than the amount of the premiums. We have also been able to satisfy ourselves, that "instructions" beyond what may be necessary for comparison of the designs, are often asked for, by architects themselves, under erroneous notions; the effect of such "instructions" being to bring all designs to a general resemblance; whilst the object of the competition is to produce new suggestions, and untrammelled by anything beyond what is necessary to good faith on the part of those who give architects the trouble of preparing designs. The management of the Government Offices competition failed, first, in the programme; second, in the exhibition, which was open too short a time, and not a sufficient number of days in the week, to be of much advantage, even towards educating the public, and which had all the usual defective arrangement of such exhibitions; third, in the selection of judges, who were nearly all amateurs, who showed by the allotment of many of the premiums at least, that they had not studied the designs, and were chiefly anxious to confer rewards upon the greatest number of persons; and fourth, by the waste of public money involved in allotment of premiums, and not proceeding with the two selected designs.

The later history of the Government Offices, resulting in the appointment of a competitor who had not received a first premium, and the selection of a design by him totally different in character to that for which he had been rewarded; and the incidents comprising changes of intention that might have worried every spark of art-enthusiasm out of another man; may not be to the discredit of the Office of Works: but it is very much to the discredit of the parliamentary and Government management combined, of public works in this country.

Undaunted by the ill-success of one of his predecessors in office, Mr. Cowper in January last, announced that the Commissioners of Works were prepared to receive designs for buildings, of a different character, to be erected on the site of the Exhibition Building of 1862. Having obtained a vote of the House of Commons in favour of purchase of the ground, but followed by one adverse to the retention of the building, the Government perhaps felt bound to make some use of the site. They appear to have considered the question of the removal of the Natural History collections of the British Museum, to South Kensington, as settled; and equally so that of the establishment in the same locality, of the permanent collection of models and specimens described as belonging to the Commissioners of Patents. As to the location of the latter collection, distant from the offices which have to be resorted to by inventors and agents, and from the library, open to all persons and invaluable to men of science, if not as to the removal of the other collections, the Government must be prepared for considerable opposition. The question of the object of the intended buildings was mooted in the House of Commons on Friday in last week, when Mr. Cowper raised a laugh by saying in the course of his reply, as reported, that "the first thing would be to get designs for the building; and the use to which the building should be put, would be a matter for further consideration." He had, only in the previous sentence, said that "the proposed building was to occupy one front of the site lately occupied by the Exhibition, and there would be space enough to receive the Natural History collection of the British Museum, and also the contents of the Museum of Patented Inventions, if it should be ultimately determined to remove those inventions to Kensington." Had Mr. Cowper not given the explanation which we have quoted last, no words would have been too strong for condemnation of a mode of proceeding not more likely to conduce to success in public works than in any other sort of object usually attempted to be served by logical system. Still, he seems to have added, that "no decision had yet been come to on that subject,"—the use to which the building should be put,—and afterwards to have said that he was "really unable to say at what particular period of time the matter" of the proposed Natural History Museum building "would be brought before the House." We should not be surprised to find that Mr. Cowper was wrongly reported.

However, designs had been advertised for; and 33 sets were received on the 30th of March last. The number 32 was first stated in the House; but this resulted from a mistake. They are now hung in the Royal Gallery near the House of Lords, as stated in our last, and were seen by the public last Saturday, as probably they may be again on this Saturday; and they will soon be on view on successive days, for, we hope, sufficient time to be examined by all persons interested. We count the straining-frames, many of which of course contain several drawings to each, 248 in number. Some of the competitors have about a dozen of these groups of drawings; and the others have different numbers down to three. We are disposed to speak highly of the manner in which Mr. Fincham, the Clerk of Works of the Westminster Palace, under the Commissioners, has managed the arrangement of the drawings, which is really as good as the space would permit. It has often fallen to our lot to endeavour to describe a similar number of drawings packed together in a much smaller space, and generally without their having been arranged on any principle. But we must venture to impress upon those who may be named as judges, that they will not obtain that knowledge of the competitors' intentions which is essential, unless with some exertion and perhaps fatigue. Some of the drawings which, with the writing upon them, are important, are as usual not to be examined without ladders, or hassocks to kneel upon; and the light in the gallery is not good.

The number of competitors is greatly below what it would have been prior to the epoch of the Government Offices case; and the falling-off may show dissatisfaction with the conduct of the Government, and with that generally of the projectors of competitions. Such an attitude of the profession, the Government ought to be observant of. Mr. Cowper will, we believe, do all that he can to obtain the best decision, and to promote the interests of the competitors; and, as a first step, he has appointed as judges three architects not at present in practice,

one painter, and one amateur. They have commenced work. As usual, the authorship of several of the designs is recognisable at once; though this may be less the case than generally. Difficulty of the recognition, and absence of many whose efforts would have been desired, will commonly go together in a competition. There are, however, in this instance, five or six designs of considerable, and some of them of great, merit; though, as usual, the "instructions" have operated, and here more than their wording should have operated, to restrict independent study of plan with the objects in view. Such objects *may* be correctly stated by those who have need of the accommodation: the manner of satisfying them can be but seldom, without architects' experience. In many of the designs, there is strange resemblance, either externally, or in construction and arrangement, to the existing and so often condemned building. Is it possible that competitors continue trying to catch what they fancy may be prepossessed views, instead of to produce the best arrangement? That would be one way of competitions not realizing the intentions of their projectors. Scarcely more than two of the designs can be classed as Gothic.

In the programme of January last, it was stated that all the buildings then standing on the land, excepting those facing the Horticultural Gardens, and used in 1862 as refreshment-rooms, were to be removed. The buildings excepted, measuring about 360 feet by 20 feet, were to be incorporated with those of the new project. This scheme, as already stated, was to provide accommodation for the collections of natural history of the British Museum, and for the models and machines belonging to the Commissioners of Patents. Besides the designs for the two museums (the buildings for which were required to be placed on the eastern, or Exhibition-road portion of the site), each competitor was to submit a block-plan embracing the whole area from Exhibition-road to Prince Albert's-road; and there is one paragraph in the original paper of particulars, which says that the buildings intended to provide the accommodation mentioned, would "probably be erected at intervals of time," and refers to future extension of those buildings, as also to the ultimate appropriation of the whole site for buildings fitted for exhibition of various objects of art and science. Premiums of 400*l.*, 250*l.*, and 100*l.*, respectively, were to be given; excepting that an architect to whom a premium had been awarded, and who might be employed to superintend the execution of his design, was to receive only a commission of 5 per cent. upon the outlay,—the commission to include all expenses for measuring, but not salaries to clerks of works.

As to the requirements of the Natural History Museum, it was stated that the extent of floor-space and wall-space might be learned from plans which were prepared in 1862, for another site, under the directions of Professor Owen, and which were printed by order of the House of Commons on the 23rd of June, 1863. These plans, along with sections, were the work of Mr. Hunt, who arranged the building in two stories above ground, with an attic over part of the centre, and with a vaulted basement under all. The ground and first floors were for exhibition purposes; whilst in the third floor provision was made for libraries and professors' rooms. A theatre, 100 feet in diameter, was provided, in a central position, for popular lectures. The museum was to be lighted from the roof, and from windows; which last were to be 10 feet above the level of the floor, so as to admit of upright glass-cases being placed under them. The building would have covered about four acres of ground; the total floor-space available for exhibition would have been about five acres; and the cost, exclusive of fittings, was estimated by Mr. Hunt at 350,000*l.* The plan resembled in some respects, in principle, that which we recommended in 1862, for any future Exhibition building, namely that of long galleries placed transversely or transeptwise to a longitudinal hall or corridor; but the connecting longitudinal portion was in two floors, whilst the transverse galleries were on one side only. But there are defects in Mr. Hunt's plan that would be fatal to it in our opinion. One of them is the provision of but one door, though a large one, to an area of plan measuring 220 feet (or eventually even 364 feet) by 200 feet. This arrangement seems to be the result of designing all the corridors (out of which open the transverse galleries, and of which corridors there are four, or two in each story, in Mr. Hunt's plan) to lead right and left, from one entrance-hall, which however is rightly shown of ample dimensions. The theatre is at the back of it.

In some of the designs, or at least in one design, the galleries placed transversely are on both sides of a central corridor, and the arrangement somewhat resembles the pavilion-plan of hospital-building, as carried into effect at Blackburn, Woolwich, and some other places where the foreign arrangement has been modified.

Mr. Hunt made his transverse galleries about 155 feet in length and 40 feet in width; and they were placed at intervals, for light, of less than 20 feet. The collective length of the galleries, giving the accommodation required, was stated as 3,280 feet, with the breadth of about 40 feet. The lower floor was to be 30 feet in height, and the upper one 25 feet in the centre. No rooms for attendants were provided in contiguity with the rooms containing the collections; but the particulars dated in last January, required twenty-five such rooms, to be each about 25 feet by 18 feet. Generally, the plan was referred to merely as explaining the views of Professor Owen, but not with the intention of restricting the designs to similar disposition or to forms and dimensions. The 20 feet width of areas would have been inadequate; and it has been so viewed by the authors of some of the best designs.

Professor Owen's requirements of space in the whole, and for each of the four departments of Natural History, namely, Geology, Mineralogy, Botany, and Zoology, and for such groups as those of Mammalia, Birds, Reptiles, Fishes, Invertebrata, Shells, Insects, Ethnology, and Osteology, were explained by him in a report which has been printed, and which the authors of the best plans have probably made themselves acquainted with; though the programme omitted to distinctly refer to it.

The judges, before beginning their examination, would do well to consider the question of lighting. It is attended with difficulty; but upon the settlement of it, the principle and the starting-points of the planning may be said to depend; and these, if not solved, may leave the utility of the building greatly beneath the full requirements. Mr. Hunt's arrangement is that of an upper story top-lighted, and side-lighted where the external walls would allow, and of a lower story lighted (except as to the side-lighting windows in the external walls) by well-holes, or in effect as was the space under the galleries of the Exhibition Building of 1862. This perhaps may be said to be necessarily the position of the matter, wherever there are more than one story, the only choice being as to the width of the courts or well-holes by way of which the light has to get to the space below a gallery, or under an upper floor; and as to the roofing-over the courts at one level or the other, or the leaving them open to the sky, which latter method would render substantial walling, with windows in it, unavoidable, however the light-admitting area might seem to be reduced below that of such an arrangement as one in which iron columns could be used as in the building of 1862. But then would arise the question whether a building with iron columns throughout the interior could be regarded as fire-proof, as required by the programme, or otherwise as consistent with preservation of the collection. An additional point not telling for the acceptance of the "ferro-vitreous" system of building, is the fact of the arrangement of the contents of a museum in upright cases to a considerable extent. But it has been contended that top-lighting (here assumed to be the best), the full amount of wall-space, and even ventilation, are all secured by a building, of one story in height, and that space in a second story really involves a loss, light being considered. The principle of one-storied arrangement has, we believe, been adopted in the design for the National Gallery, by Messrs. Banks & Barry, which is intended to be carried into effect on the ground at the back of Burlington House; and it is very prominently put forward by one of the competitors in the present instance, in an alternative design. But we are ourselves strongly of opinion that whatever may be desirable in picture-galleries, side-lighting, as well as ample light, is necessary for the exhibition of all minute objects such as are to be displayed in table-cases. Moreover, as to wall-cases, top-lights must be arranged with the greatest care, or the objects will not be seen as intended. The aim in both instances is to get the light in ample quantity upon the object, and to avoid if possible reflection of the spectator's head or figure. If any one will go to the Jermyn-street Museum, so admirably planned in some respects, he may discover that the reflection makes it impossible to see even the very forms of fossils, as those of the lower *strata*, which rather than the mere stones, were the objects of exhibition; and the same disadvantage would be experienced were the contents of the table-cases insects or shells. In the portion of the South Kensington Museum, where the objects lent on loan were exhibited in 1862, those in the table-cases, could be seen only insufficiently by day, and badly by night, owing to the position of the light with reference to the spectator's position; and partly to the light being, after all care, inadequate for objects of minute workmanship; whilst, as to the largest area of top-lighting, those who, in 1862, in the International Exhibition, had goods which they were anxious should be seen, especially some of the French exhibitors, might be questioned with advantage as to the effect of the lighting upon the objects in upright cases. We do not profess to have decided, or to be able now to more than suggest these questions as necessary for consideration of the judges, and belonging as much to their duties as a question of taste, or as the mechanical process of testing whether the number of superficial feet for each portion of the collection has been provided by a competitor.

Of the Patent Museum, little was said in the programme, excepting that a superficial area not less than 23,000 square feet, was to be provided, disposed on two floors. A residence for a director of police was mentioned, as though it should form part of the Patent Museum building.

Decidedly the most conspicuous, or in some respects the most meritorious, set of drawings in the exhibition, is that which faces the entrance, and is marked with the motto, "*Ad ogni uccello suo nido è bello.*" It includes nine frames of drawings, got up and mounted with skill and taste. The perspective is sketched in in brown ink, and tinted, with a masterly hand. The judges will decide whether it tallies with the instructions. No other competitor has addressed himself more completely to the question of the appropriation of the whole ground extending from the situation indicated by the instructions as to be appropriated to the Natural History Museum and the Patent Museum (that is the east, skirted by Exhibition-road), to the western extremity bounded by Prince Albert's-road. His view is taken from the south, making the Cromwell-road the boundary, that way, of a most effective group of buildings, as in the drawing, composed of a central mass, and four subordinate masses, the latter being one at each angle of the ground, and the central mass being crowned by a large dome and four smaller domes. The masses are joined together only by covered ways; excepting as to the north, or Horticultural Gardens, side, along which the Natural History Museum, with the space reserved for its extension, forms a continuous building. From this the dome-crowned portion projects southward. In the elevation east, as in that west, a space of 100 feet is left without any obstruction (other than the low covered way) to the view of the dome. The south-eastern mass is the Patent Museum: the north-eastern is the end of the Natural History Museum already named. Each of the four angles of each mass at the angles of the ground, is crowned by an octagon story, or belvidere. Deferring mention of the decorative details, we revert to the question of plan. Here it is seen that the design is not quite abreast with the requirements, and in external effect even would not equal what might be supposed only from the view. The centre, for a length much more than the breadth of the dome-crowned projection, is recessed from the Cromwell-road; but we question whether, considering width of that road, the building could be seen as represented in the view. It may be quite right to give up space for foreground and accesses: but the whole building might have to be set back to secure the effect shown in the view we have mentioned; which the requirements, large as the space is, might not allow. Several other designs in the collection would fail greatly through neglect of the consideration of the width of the Cromwell-road and the other two roads. Trees are in the foreground of one of these views; and the building is shown as though in a park. It may be regretted that the site was not large enough to admit of due effect, and that approaches obliquely disposed and otherwise were not made to lead up to it; but if distance and foreground be limited almost to the width of the street, designs should be made as might be best, accept-

r facts. The author of the design spoken of, s taken great pains to show that his general in is divisible, according to as many as nine idifications, any one of the number being capa- of being regarded as final or to be carried ward at a later time. The rooms, or divisions the museum, open from one side of a side- ated corridor; and parallel with each dividing ll, is a row of columns on each side thereof. e wall and columns carry a gallery. The fing is arranged in wide spans over the lofty ition of the room, and in narrow spans over gallery. Excepting in the case of the corri- s, the lighting is all from the top. Provi- n is made for cleaning; and, by double glazing, prevent access of wet. Though columns ve been mentioned, the author says that none iron are used. The system of top-lighting, peated in large courts near the main entrance, s shown by the design itself in one small tch, might entail all the objections that we ve alluded to. The Patent Museum complete shown as a building square on plan, with side- hted galleries next the external walls, four ircases, one at each angle, and a glass- vered central court. The basement story, as the manner of lighting it, is not the same in the drawings. The general character of this sign, decoratively, is that of the works of ramante. There are broad angles, panelled; ere are pilasters; windows that nearly all are ch-headed and furnished with small shafts, b-arches, and ornamented spandrels; there is uch sculpture; names of celebrated men are serted in the frieze; and there is a bold and ry effective base-moulding. The materials roposed are stone and granite, or red brick, hite terra-cotta mouldings, and red terra-cotta rnament. One merit of the design is in the rrangement of the chief dome central to each evation and surrounded by the other domes. n the plan, the lighting of the museum, the aircases to the galleries, and the position of he attendants' rooms, are perhaps not so good s in other designs.

In the design marked "Well to build is well o buy," buildings covering the eastern half of he entire ground comprise nearly everything hat is brought into the perspective view. The eneral plan shows the eastern half nearly all overed by the buildings of the two museums, ith the requisite courts or areas for light, and ndicates that the other half might have build- ngs similarly arranged in plan. The author egards an exact counterpart of decorative etails for symmetry, as unnecessary; though e might desire the general character, and the eights, to be observed throughout. In the entre of the entire ground would be a building, eeply recessed from the Cromwell-road front, o be used as a general meeting-hall; and it would be terminated by a lofty dome. The omewhat lancet-form of this latter feature seems o have been intended to accord with high- itched roofs and other picturesque features which are amongst those of the design; although the details, displaying originality, and seeming to be the result of much study, are nearer to Italian in character, than to Gothic. The two blocks of building of the Cromwell-road front, would be joined together by a covered way, carried by an arch or arches, an arrangement similar, in fact, to that of the bridge of the Rialto; although that example is a far larger structure than the covered bridge in the design before us. Two similar bridges appear in the Exhi- bition-road elevation, connecting three blocks of building. Of these three blocks, that which is to the south, and which running west, forms nearly the half of the Cromwell-road front, is the Patent Museum. This building, and the width of ground at the back of it, comprise space which is not at all too much for the requirements of a museum that ought one day to equal and to surpass that noble institution the Conserva- toire des Arts et Métiers. The several parts of the eastern front, have an accordance only of character and style, and an accordance in heights: the long front in the middle, that of the Natural History Museum, is symmetrical; but the end of the Patent Museum, and the buildings which are in corresponding position northward, do not resemble one another further than has been stated. The northern buildings comprise the theatre (some of the details of which combine with the general form to remind us of an Italian baptistery), an Educational Museum, and a clock-tower, terminated with a lofty curved roof. In the plan of the Natural History Museum, which building occupies by far the largest portion of the eastern half of the ground, the galleries are arranged transversely to a central corridor, as by our principle explained in 1862 with the aid of type, excepting that there are courts open to the sky. There are twelve of these courts, measuring each 110 feet by 27 feet 6 inches; the great central corridor, in the axis of the plan, is about 440 feet in length, and is 30 feet in breadth; and the transverse galleries measure 155 feet by 40 feet. As will have been understood, they are in two stories, whereof the lower one is lighted by side-lights, and the upper one from the lower halves of the slopes of the roofs. At the end of each transverse gallery, and next to a corridor of communication from gallery to gallery, is an attendant's room with separate staircase and a lift. In the arrangement of these attendants' rooms, this plan is superior to any in the exhibition, as, we might add, it is in most of the features of the Natural History Museum. The courts are at least 7 feet 6 inches wider than those of Mr. Hunt's plan. Of course the ground covered, in order to get the Exhibition-space, is considerable, whilst probably not more than necessary. We have alluded to the decorative character of the front. It has been well studied; and the mouldings, and the details of ornament, display much invention. The roofs are of high pitch and flat-topped, and have dormers. The windows are generally arch-headed, and have a novel form of archivolt combined with the key-stone. Sculpture, as of shells and vegetable forms, or otherwise designed with special reference to the use of each building, ornaments certain spandrels; whilst other spandrels, those of the upper range of windows particularly, are carved in patterns resembling drapery, but not suspended exactly as hitherto in the much-criticised festoons. The sculpture in the Patent Museum front is excellent. The main entrance of the Natural History Museum has an arcaded porch, with steps right and left. The ground story of the whole building is well raised above the street-level. Brick and stone are suggested as the materials to be used. The author of this design deserves great praise for the thought he has evidently given to plan; and on the whole, his idea of grouping the buildings with a symmetry of positions, and general masses, whilst in other respects varying corresponding fronts, is worked out with skill, and with a result well deserving to be recollected when the general question involved in such treatment may be mooted, as it is likely to be again from time to time. Some of the details resemble those of the Insurance Office at the corner of Gracechurch-street and Eastcheap, which we have published, whilst the general character reminds us of that of a design for the Government Offices which also we have published. It would be almost idle to refrain from this slight indication of the authorship, which moreover is stamped upon the design as plainly as the merit of the plan and the art-work of the elevations.

We are not able now to describe more than these two designs: but we have referred to others; and we shall continue our notice. Out of the designs that we have not distinctly mentioned, we have noted those marked "Sublime Moliar Atrium," "Not known and yet well known," "Ich Dien" (with the Prince of Wales's Feathers), "Fortiter et Fideliter," "Utilitas," "Dieu et Mon Droit," "Mæcenas," "Athenian," "Pro Rege et Lege," "Bramante," "Consilio et Labore," and "One more Attempt at Design out of the beaten Track," as worthy of attention for various features of plan or decorative treatment.*

* We have received several communications pointing out the extent to which the instructions have been departed from by some of the competitors; but we have already devoted so much space to the designs that we cannot find room for the letters.

COUNTRY CONTENTMENTS TWO CENTURIES SINCE.

We are apt to overlook, as we contemplate the various transitions from style to style in English architecture, the alterations that were taking place at the same periods in the domestic life of our ancestors. These alterations bear so materially upon the styles of their buildings that we should at least keep their influence in mind. The thick walls and small windows of the very early builders gave place to those of lighter construction for the sole reason that the deviation made from olden manners called for the change. In this matter we are prone to attach, perhaps, too much importance to the political aspects of the country at given periods, and to ascribe too much to their effects. We think more, for instance, of Oliver Cromwell and his generation as iconoclasts than as husbands and fathers requiring certain accommodation in their homes; and more of the tragedy enacted on a platform in front of one of the windows of Whitehall than we do of the myriads who lived and died at the same time in less isolated grandeur and misery, and left the children behind them of whom the present generation are descendants: and yet we may be sure that the sweet scent of hay floated in at their windows as in at ours in the spring-time, that roses bloomed and faded, that corn grew, was gathered in and garnered up, that waters froze and thawed; in fine, that the seasons brought their various exigencies and employments then as now, and required as varied provisions in the construction of dwellings and homesteads; and that it was in the concession of these requirements of seasons and civilization that the progress of domestic architecture consisted. With the object of viewing the every-day occupations of those who dwelt in the land two centuries since we dip into a knotty nut-brown volume lying before us, the pages of which are of the tawny tint of old point-lace, entitled "Country Contentments, or the Husbandman's Recreations. Contayning the wholesome Experiences in which any Man ought to recreate himselfe, after the Toyle of more serious Businesse; as namely, Hunting, Hawking, Coursing with Greyhounds, and the Laws of the Lease, Shooting in Longbow or Crosbow, Bowling, Tennis, Baloone, the whole Art of Angling, and the Use of the Fighting Cock." It is written by Gervase Markham, and bears date 1633. With this is bound up "The English House-wife, containing the inward and outward Vertues which ought to be in a compleate Woman. As her Skill in Physick, Surgery, Cookery, Extraction of Oyles, Banquetting Stuffe, ordering of Great Feasts, preserving of all Sorts of Wines, conceited Secrets, Distillations, Perfumes, ordering of Woull, Hempe, Flax, making Cloth, and Dying; the Knowledge of Dayries, Office of Malting, of Oates, their excellent Uses in a Family, of Brewing, Baking, and all other Things belonging to a Household." This is also written by Gervase Markham. As he sat compiling these works, which he affirms, parenthetically, are most profitable and necessary for all men and the general good of this kingdom, there were sixteen years to run before the dread vision of a block and edged axe began to obtrude itself into the thoughts, day and night, of Charles I. John Hampden had fallen on Chalgrove field ten years before. Rubens had yet seven years to dream of his gorgeous ceiling in the banqueting-room in Whitehall Palace. Dugdale, Ben Jonson, and Inigo Jones were still living. Evelyn was but thirteen years old. Sir Christopher Wren was an infant in arms. Milton's step was falterless and his vision keen. Camden, the antiquary, had lain but ten years in his grave; Sir Robert Bruce Cotton, whose collection of records, charters, and MSS., is the marrow of the British Museum, but two. The Great Fire had not then consumed old London; nor the great plague depopulated it. And the charm of novelty had scarcely vanished from its pages when Richard Cromwell resigned a crown to enjoy the "country contentments" of which it treats.

It is observable that whenever the master of the house is alluded to he is called the husbandman: whenever the mistress is indicated, she is called the housewife. The various "contentments" appear to have been pretty equally divided between them; all the outdoor occupations being set aside for the husbandman, and the superintendence of the indoor economy placed in the hands of the housewife. The husbandman is recommended to make himself proficient in the cure of all diseases of cattle, as well as those of horses and hounds, including hydrophobia,—a recreation that it would be, doubtless, difficult to reconcile with enjoyment at first; in the art of breaking in horses, and of producing white or black stars upon their foreheads, at pleasure,—another contentment that the uninitiated would be scarcely likely to enjoy; in the proper mode of composing kennels; in the art of enriching barren soils; in the most effectual ways of preserving seeds and grain; the husbandry of bees; the ordering of poultry, including the proper gathering of goose-feathers, for, be it known, "the custom pursued by some of pulling the feathers out of their living geese twice a year for scriveners, beds, and fletchers, is but a needless profit, as it disables their flight and leaves them a prey to the rapacity

of the fox, and also exposes them to the cold;" in the construction and stocking of fish-ponds, and similar pursuits.

The planting of an orchard is esteemed one of the greatest boons permitted to man's lot. "What was Paradise," asks the good Gervase, "but an orchard?" Again, he urges, when wearied with the troublesome affairs of their estate, being tired with the hearing and judging litigious controversies, and choked with the close *ayres* of their sumptuous buildings, their stomachs cloyed with variety of banquets, where do the gods of the earth fly but into their orchards?" An orchard planted with fruit-trees, decked with flowers, ornamented with mounts of stone or wood curiously wrought within and without, with a true *dyall* or clock in a corner thereof, and some *anticke* work placed here and there, especially if silver-sounding music composed of instruments and voices commingled could be introduced, both delights the mind and brings health to the body. And if they added to these, large walks, broad and long, close and open, raised with gravel and sand, having seats and banks of camomile, with borders on every side hanging and drooping with fruits, the roots of their trees powdered with strawberries, red white, and green, their lesser wood cut to the form of men armed in the field ready to give battle, or of swift-running hounds to chase the deer, a bowling-alley, and a pair of buts with which to stretch their arms, the gallant cavaliers could wish for nothing more to delight their friends; unless, indeed, it might be a maze well framed to the height of a man, wherein a guest might divertingly lose himself while gathering berries; or, perhaps, a brood of nightingales. Should there be, though, hard by, a pleasant river, they might make a conduit or two, and sit on their mounts and angle *peckled* trout or *sleighty* eels; or moats whereon they might row and fish with nets. Bees, if kept in a dry and warm beehouse, *comely made of fir-boards*, would thrive in an orchard, yield great profit, and pay the gardener his wages. Yea, continues the practical Gervase, twenty stocks or *stooles* of them would pay your orchard. "What can your eye desire to see, your eares to heare, your mouth to taste, or your nose to smell, that is not to be had in an orchard, with abundance of variety?"

Gardens bear no comparison to orchards in the esteem of this representative writer, and are handed over to the care of the country housewife; for, let a garden be laid out with ever so much profitable quaintness, or be never so fresh and fair and well kept, it will require renewal of soil and herbs many times in the short life of a man; but orchards endure for hundreds of years. He condemns with much warmth the indifference which deters tenants from planting fruit-trees, and endeavours to induce landlords to grant longer leases, so that they can no longer defend themselves behind the proverb, "Botch and sit; build and flit."

The medium through which our author viewed life for his readers' behoof, was the conviction that a good man was entitled to every comfort and felicity that the earth, or the creatures of the earth, could afford him. High in the list of earthly pleasures, he placed country recreations; and foremost among these the most royal, stately, manly, and warlike chase, the hunting of wild beasts. Hawking, coursing with greyhounds, angling, training fighting-cocks, shooting with crossbows, bowling, playing tennis and *baloone*, follow in the succession given. These amusements are severally treated at great length, every mischance anticipated, every remedy detailed, every success delineated, and rigid compliance with every etiquette insisted upon. The treatise on angling requires especial comment as having been published exactly twenty years before the first edition of Izaak Walton's more celebrated work appeared, and as having considered the subject in as devout and deferential a light. Gervase Markham claims for angling the antiquity of having been the recreation of the first patriarchs, and the dignity of being ever attended by four sisters, Patience, Justice, Temperance, and Fortitude. It is the most comely and honest of pastimes, and gives the most liberty for religious meditation. It calls, too, for as much learning as skill; for an angler, to come up to Markham's standard, should be a general scholar, acquainted with all the liberal sciences and grammar, so that he may be able to write or discourse of his art in true and fitting terms. He should have sweetness of speech, strength of argument; be able to tell by the aspects of the sun, moon, or stars, of coming changes in the weather; know the geography of the country well; and be skilled in proportions so as to be able by soundings and calculations to arrive at questions concerning currents and bends of rivers. He should not be unskilful in music, so as to be able to relieve any possible melancholy by a hymn or anthem, as David did in Salem. Full of love for his neighbour, he must be strong and valiant, not affrighted with thunder, nor fearful of storms, not affrighted with thunder, nor fearful of storms, humble of thought, not disdaining at need to kneel, lie down, or wet his feet and figures, and dexterous in the manufacture of lines, hooks, floats, and artificial flies. Above all things, an angler's apparel should be plain and comely, of no garish or shining hue; but of a tawny or russet colour, fitting close to the body, well lined, without any new-fashioned slashes, or hanging sleeves waving loose, for fear of offending the sharp eyesight of the fish.

In a computation of the labour to be expected from an agricultural servant daily, we may see whether times have bettered in this respect. Gervase Markham led husbandmen to expect that their men might well plough an acre each of stiff soil daily, or, perhaps, an acre and a half, with one team; and in light sandy soils two or three acres. A man could well mow an acre of meadow-land a day, or an acre and a half of barley or oats, or, if the latter should be growing thin, he might even mow three or four acres a day, and not be over-worked; of wheat he might thrash four bushels; of barley, six; of beans or peas six bushels per diem. A good farmer or *plowman* rose at four, and after giving thanks for his rest and the success of his labours, proceeded to the stable, foddered his cattle, cleaned the house, rubbed down the beasts, curried his horses, rubbing them with cloths and wisps till they were as clean as they would come. He then took both oxen and horses to water, and, housing them after that process, then gave them more fodder and, his horses especially, provender, consisting of chaff, dry beans or oat-hulls, peas or beans, or clean oats, or clean garbage, with straw chopped small with it, according to the means of the husbandman. Whilst they were eating he attended to their harness and the plough-gear, duties which occupied him till six o'clock. He then spent half an hour over his own breakfast before yoking his cattle, which would occupy him another half-hour. At seven he began to plough, and ceased not till two or three in the afternoon, when he brought home his cattle, rubbed them, foddered them, gave them food, and went in to his own dinner. At four o'clock, allowing half an hour for his dinner, he went again to his cattle, rubbed them down, cleaned their stalls, gave them more fodder, and then occupied himself in preparing the necessary fodder for the next day. This done, and carried to the stable or ox-house, he once more watered his plough-oxen and horses, and gave them more provender. At six o'clock he went into the house for his supper, after which meal he sat by the fireside, mending shoes for himself or the family, or beat hemp or flax, or picked and stamped apples or crabs for cider, or ground malt or querns, or picked candle-rushes, according to the season, till eight o'clock. Then he took his lanthorn and candle, and went to take a final look at his cattle, littered them, saw that they were safely tied, gave them food for the night; and then, giving thanks for benefits received during the day, retired to rest himself. There were many other duties performed, but these were all that fell to the ploughman's share. Each month brought its varied occupation, all of which Markham duly chronicled and grouped with rules to maintain the husbandman's health through each season. In January, he was to keep his body warm, and let his diet be good and wholesome, taking exercise for his sauce. In February, he was to forbear meats that were slimy or phlegmatic, and either purge, bathe, or bleed, as art directed. In March, bathing was to be frequent, bleeding but rare, and diet cool and temperate; and so on throughout the year, till towards Christmas, when meats might be well spiced, wines used, and every means taken to banish care, and keep the heart in good cheer.

But it is in the duties devolving upon the "complete housewife" that we may best discern the influences that affected domestic architecture. The profusion of provisions in the banquets of the time bordered upon barbarous magnificence, compared to the elegant modes of preparing dishes in the present day, and called for dining-halls and kitchens of sufficient dimensions to avoid the terrible confusion that must otherwise have occurred. It was held that a woman had no right to enter the state of matrimony unless possessed of a good knowledge of cookery; for otherwise she could perform but half her vow: she might love and obey, but she could not cherish. To be perfect in this art she must know in which quarter of the moon to plant and gather all kinds of salads and herbs throughout the year; she must also be cleanly, have "a quick eye, a curious nose, a perfect taste, and a ready eare;" and be neither butter-fingered, sweet-toothed, nor faint-hearted: for if she were the first of these, she would let everything fall; if the second, she would consume that which she should increase; and if the third, she would lose time with too much niceness. For an ordinary feast with which any good man might entertain his friends, about sixteen dishes were considered a suitable supply for the first course. This included such substantial articles as a shield of brawn with mustard, a boiled capon, a piece of boiled beef, a chine of beef roasted, a neat's tongue roasted, a pig roasted, baked *chewets* (minced chickens made into balls), a roasted goose, a roasted swan, a turkey, a haunch of venison, a venison pasty, a kid with a pudding in it, an olive-pie, a couple of capons, and custards. Besides these principal dishes the housewife added as many salads, fricassees, *quelquechoses*, and *devised pastes* as made thirty-two dishes, which were considered as many as it was polite to put upon the table for the first course. Then followed second and third courses, in which many of the dishes were for show only, but were so tastily made as to contribute much to the beauty of the feast. The banquets given by princes or nobles were much more important affairs. They were served in this manner:—First the grand sallet was to be marshalled in by gentlemen and yeomen-waiters, then green sallets, boiled sallets, and compound sallets; these were followed by all the fricassees, such as collops, rashers, &c.; then by boiled meats and fowls; then by the roasted beef, mutton, goose, swans, veal, pig, and capon; next were ushered in the hot baked meats, such as fallow-deer in pasty, chicken or calve's-foot pie, and dowset; then the cold baked pheasants, partridges, turkey, goose, and woodcocks; lastly, carbonadoes both simple and compound. These were all arranged upon the table in such a manner that before each trencher stood a salad, a fricassee, a boiled meat, a roasted meat, a baked meat, and a carbonado,—a profusion that must have been almost overwhelming. The second course comprised the lesser wild and land fowl, which were again followed up with the larger kinds, as herons, shovellers, cranes, bustards, peacocks, &c., and these by cold baked red-deer, hare-pie, gammon of bacon pie, wild boar, roe-pie; and scattered among these were the "conceited secrets" in the way of confectionary and sweet pastry, which were the pride of the good housewife's heart; besides whatever fish was available, which was to be distributed according to the manner in which it was dressed, with the respective courses, the fried with the fricassees, the broiled with the carbonadoes, the dry with the roast meats, and those stewed in broths with the boiled meats. The carbonadoes consisted of any meat scotched on both sides and sprinkled with seasonings in various combinations, and then either broiled over the fire or before it. Roasted geese were stuffed with gooseberries, hence the term; and, if we were to enter into the given details of the various modes of dressing these numerous dishes, we could mention many as long disused. Some of the terms employed are as startling to modern ears as the ingredients: to take one instance, pie-dishes were called coffins.

We are not to conclude that this profusion was an everyday fact. There are hints here and there that this was by no means the case. Oatmeal is called the crown of the housewife's garland, as being the largest item of consumption in the household; and whigge (whey) is praised as an excellent cool drink, and as wholesome as any other with which to slake a labouring man's thirst the whole summer long. On the other hand we know this whigge was looked upon in a somewhat similarly scornful light as that in which we regard small beer, because it was adopted to distinguish the political body opposed to the Tories. And the constant supervision of the mistress of the house over every undertaking would also be a surety against the practice of extravagance. Although there were good men-malsters in the land, there was no beer to compare with that made by the mistress and her maids. These made both beer and ale; cider from apples; perry from pears; mead and metheglin from honey and herbs. The wines,

,oo, were in her care. It is curious to note the kind of care they experienced at her hands. Every *fatt* (vat) of foreign wine was dosed with several gallons of milk and eggs beaten up, and each was flavoured with some gallons of another, in a mode that must have much bewildered the palates of King Charles's lieges. If claret lost its colour, she stewed some damsons or black pullasses, and poured their syrup into the hogshead, when all came right again. If sack ran muddy, she took some rice, flower, and camphor, and popped that mixture into the butt; if any wine became hard, she knew how to make it mellow with honey and eggs: the same with muskadine and malmsey. The indefatigable mistress of the house was as omnipresent in the bakehouse as elsewhere, and saw to the making up the various kinds of bread, both for the family and the hinds or servants. There were several kinds in use; wheat bread, rye bread, rye and wheat mixed, and barley and wheat mixed: into the servants' barley-bread she adroitly mixed two pecks of peas and a peck of malt. She also looked in at the dairy, saw that it was kept as clean as a prince's chamber, and gave an eye to the profits. She could send several cheeses to table,—new milk cheese, nettle-cheese, floaten milk cheese, and eddish or after-math cheese. By way of relaxation to these serious duties, which, with the necessary supervision of the dressing and spinning of wool, hemp, and flax, must have kept the good dame pretty fully employed, she prescribed for any of her household that were indisposed, compounded her own remedies, and made stores of scented bags to lay among her hoarded-up linen, scented waters for different ornamental purposes, perfumes to burn, washing-balls, perfumed gloves, rosemary-water to preserve the complexion (called the bath of life), violet-water, herb-water for weak eyes, and other distillations. Plaisters, ointments, lotions of all kinds were among her cunning secrets. These occupations serve to show why the offices were so spacious and my lady's closet so small. Markham gives scores of quaint recipes no housewife should ignore who was at all sensitive as to her reputation for skill. In these we are reminded of the absence of really scientific knowledge in the peculiar value set upon valueless distinctions. The milk of a red cow, for instance, was deemed more efficacious than that of any other colour for medicinal purposes; butter made in May without any salt in it was esteemed a sovereign cure for wounds, strains, or aches, although that made in any other month possessed no such virtue; and again, it was of no use to apply certain remedies unless the moon was on the wane. This portion of the volume is dedicated to the Right Honourable and most Excellent Lady, Frances, Countess Dowager of Exeter.

In the state of society here depicted as passed amidst "country contentments" it was estimated that a man's life, or, as Markham quaintly expressed it, "A clean body kept by the three doctours, Doctour Diet, Doctour Quiet, and Dr. Merriman," should endure for a space of a hundred years; and the reason why this was not always attained was ascribed to the fact that the person dying below that age had degenerated his constitution to a condition of "tender rottenness" from cloying his frame with excess of meat, drink, sleep, and idleness. This opinion is applied to every phase of longevity, both in the animal and vegetable kingdoms. The conviction points to a healthy energy of mind bearing alike on social, scientific, and architectural progress; and that this worked its due effect we have evidence in the strides since made in these matters. Those who would not exert themselves for their own profit, or for the benefit of a friend, were deemed "well worthy to want." A noteworthy instance of the result of this sturdy shouldering of the wheel may be seen in the very different face now worn by the Weald of Kent to that it presented two centuries since. We now look upon Kent as the garden of England: husbandmen, in King Charles time, pulled their broad-rimmed slouched hats over their eyes, and turned their gaze from it as an "unfruitful wilderness." Our author was in possession of information "painfully gathered for the good of this island by a man of great eminence and worth," and this he revised, enlarged, and presented to his readers in the form of an additional "booke" or chapter of his more important work, entitled "The Enrichment of the Weald of Kent; or, a Direction to the Husbandman for the true Ordering, Manuring, and Inriching of all the Grounds within the Wealds of Kent and Sussex, and may generally serve for all the Grounds in England of that Nature." The particular manure he recommended for this large tract of woody soil, that from ancient British times had retained much of its original character of a vast hunting-ground, was marl. And this was to be applied with the characteristic profusion and energy of the period. The land was to be well ploughed with the "strength of eight beasts at least;" and then the marl was to be spread over it at the rate of 500 cartloads an acre, every load to contain ten or twelve bushels of eight gallons each, and every acre to contain 160 rods of 16½ feet to the rod.

As the tawny pages flutter to and fro there is a little movement in the air: we could almost fancy as of groups of old-world husbandmen and housewives busy with the tasks set forth. There were no periodical reviewers in those days; but as corn found in Theban tombs has sprung up in modern soil, perhaps this notice of an old book may verify the virtues of good seed; and the energy, industry, economy, and enterprise shown to have been so profusely sown by our forefathers be reaped by us and left, in new forms, to posterity.

CIVIL ENGINEERING IN INDIA.

Having seen in your valuable periodical some complaints respecting the treatment the English civil engineers have met with from the Indian Government, I deem it my duty, both for the interest of truth and the benefit of the profession generally, to lay before the public, through you, a few leading facts of some importance connected with the subject.

I am the more encouraged to do this from the circumstance of our Indian possessions presenting an immense field for the exercise of engineering talent, and the Home Government of India continually advertising for young men to come out to India to fill certain appointments in the Department of Public Works; and I consider the treatment those have met with who have been deluded from their homes by false and deceitful promises, deserves to meet with a world-wide circulation.

In the year 1855, some seven or eight English civil engineers were sent out by the Court of Directors of the late East-India Company, and about the same number of subordinates, to the Madras presidency. The former were to receive 600*l.* and the latter 300*l.* per annum: some of these were young men, but others were persons of considerable practical experience, and all of them possessed a good English education and excellent testimonials. They were under a legal covenant to serve the East-India Company for twenty years, after which, they were to retire with a certain pension: this covenant entitled them to certain privileges; and they were, moreover, told that they were to serve a company remarkable for its liberality and generosity to all deserving servants.

For some time after their arrival, there did appear a disposition on the part of the Madras Government to treat them with liberality: they were allowed a good establishment of clerks, draughtsmen, &c., and a sum of 6s. per day was granted to each of the engineers, and half that amount to their assistants, to pay for a conveyance to and from their place of business; and this sum, they were told, was in accordance with their covenants with the Home Government. After some little time, a change seemed to come over the Madras Government, the cause of which it was not very easy to explain. In the first place, they were all placed in the rank of uncovenanted servants, directly contrary to their own covenants; and persons of the most inferior rank in the uncovenanted service were suddenly, and much to their own amazement, raised to the same rank and rewarded with the same salary. The next step was to reduce all their pay to one-half what was agreed; but this was so glaringly illegal that it was ultimately abandoned. Next, their establishment of clerks, &c., was reduced until they had nearly all the inferior office work to do themselves. Then their travelling allowance of six shillings per day was taken away, and they were told that when their journeys out and in did not exceed five miles in each direction, they must pay for it themselves, although five miles in India is fully equal to twenty miles in England, the heat being so excessive and the so-called roads so miserably bad. Then they were informed that unless they learnt the native languages no promotion would be allowed to them; and yet there are about seven or eight different languages in the Madras Presidency; and the head officers of the Department of Public Works have in many instances been twenty years or more in the service, and never learnt even *one* language properly. Besides all this, not one of the English civil engineers has, up to the present time, been made district engineer, or even allowed to superintend a single work on his own responsibility, but compelled to abandon his European experience and do his work in the same disgraceful manner that it is done in by the military officers who are placed over him, and whose total ignorance of practical science in many instances exceeds all belief. The Home Government engaged to supply them with everything for the proper performance of their duty, and yet they have been left sometimes even for years with no proper instruments, no office of any kind, no office furniture, and hardly any kind of stationery except a few miserable articles of the most obsolete character. Often their surveying instruments are of so wretched a description as to be more fit for a marine-store dealer's shop than an engineer's office. They are often removed to distant stations for no assignable reason, and allowed only one shilling per mile for travelling, while their actual expenses are frequently three times this amount. I know of one gentleman who has been removed six times in eight years, and he told me that one of his journeys extended to nearly 800 miles: he was compelled to start without a single rupee in his pocket, and do the best he could; and he received his travelling expenses three months after his journey was completed.

Latterly, every attempt has been made to degrade their professional character by refusing them all opportunities of displaying their abilities: hardly one of them has ever been permitted to begin and complete a single engineering job on his own account. Their time is mostly frittered away in patching up broken bridges, mending tank-banks, and filling in useless office forms: often they are employed for days in paying native labourers with their own hands, as the Government pay the clerks and writers so wretchedly that their honesty can never be depended upon,—the head writer of an establishment seldom getting more than two shillings per day. If they fall sick in the execution of their duty, one-half of their pay is deducted: if they have families, no medical attendance is allowed to their families without payment of a most exorbitant description. I knew one gentleman who was suddenly called upon to pay 20*l.* for medical attendance to his family of a most trivial character; and 15*l.* or more are often charged for an accouchement. Sometimes they have to live at a station sixty or seventy miles distant from all European society, and lodge in the most wretched and unhealthy hovels. The actual cost of living is at least double what it is in England, so that it is extremely difficult to save money. I know it may be alleged that some of these inconveniences are inseparable from their duties, and that military engineers are equally exposed; but even when this is the case, the latter are far more liberally paid, and constantly promoted over the civil engineers' heads, without the slightest reason, except favouritism.

The following facts will show the difference between the pay of civil and military engineers, &c., in the Madras Presidency:—

	Per annum.
Military Officers of the Engineer Corps in the Department of Public Works, Madras Presidency:—	
Lieutenant-Colonel of thirty years' standing, with no European experience, from 2,000*l.* to	£3,000 0 0
Captain of twelve years' standing, with no European experience	1,320 0 0
Lieutenant of six years' standing, with no European experience	640 0 0
Infantry Officers:—	
Major of twenty years' standing, no European experience	1,250 0 0
Captain of twelve years' standing, no European experience	808 0 0
Lieutenant of six years' standing, no European experience	630 0 0
(Besides travelling allowance according to rank.)	
Covenanted civil engineers of eight years' standing, besides European experience varying from six to twenty years	600 0 0
(Besides travelling allowance, same as the above.)	
Uncovenanted Members of the Department of Public Works:—	
Corporal of Sappers and Miners, of above twelve years' standing, with no European experience	500 0 0
Assistant-engineer of about six years' standing, with no European experience	600 0 0

Besides this, it must be borne in mind that during the past eight years nearly all the young lieutenants of engineers have been promoted to be captains, and many of the captains raised to lieutenant-colonels, while during the same period

the covenanted civil engineers have received no promotion except a trifling deputation allowance, and this only temporary and in a few cases.

There are still nearly fifty captains and lieutenants of engineers to provide for, so that the English covenanted civil engineers stand but a very poor chance of promotion.

Let us now inquire what grounds the military gentlemen have for this preferential preferment. According to the constitution of the late East-India Company, each director was entitled to a certain amount of patronage, so that all the military officers were appointed by individual directors, as a matter of favour, and very often as an act of charity towards their needy friends or relatives. The education of the young cadets was paid for entirely out of the public funds; and not only was their passage out to India defrayed by the State, but they were allowed to count the last year of their training at Addiscombe, or Chatham, as part of their period of service, to entitle them to pension. How their time was generally employed there is well known to every one in their neighbourhood. They likewise participate in the benefits of the military fund, retiring regulations, and furlough, &c.

The whole of the covenanted civil engineers were appointed by the Court of Directors, unsolicited on their part, most, if not all of them being at that time employed in Europe. Their education had been paid for by themselves or their families, without any expense to the State: their passage out was paid by the East-India Company. Here they are excluded from the benefits of the military fund, entitled to no furlough and no retiring benefits, while after twenty years' service their pension is only one-third of their average salary.

As to the value of the professional services of the two classes, the bad manner in which all the works of the military engineers are performed, is so well known, that it is sheer waste of time to attempt to prove what has been already proved over and over again, and fully testified by all the higher authorities for upwards of sixty years. These *mock engineers* have had the sole control of the public works of the Madras presidency: they have spent about forty millions sterling, and left the country without roads, bridges, canals, or any available means of communication: not one single man of acknowledged talent has appeared among them; hardly one single building deserving of the name: by ignorance, incompetence, extravagance, and shameful waste of the public money, with a fixed determination to oppose every species of improvement, and crush every attempt to put matters upon a right footing, they have made the name of a civil engineer a by-word of reproach, and the Department of Public Works a name of scorn and derision to the whole public press of India.

How the Madras Government—composed of gentlemen of honour and respectability—could behave in the manner they have done to the civil engineers sent out from England, must always be a matter of astonishment and regret; or how the Home Government could tolerate such proceedings, is equally inexplicable; but it is most earnestly to be hoped that no more English civil engineers will be so weak as to be deluded from their homes by such false and specious pretences: if they do, they richly deserve the treatment they will get. Let them remain at home, or try the new colonies, resting assured that 100*l.* per annum in their own country is very far better than 600*l.* in India, with all the indignity and the ill-treatment they will be certain to meet with there from a clique who know nothing except what they learn from more ignorant native overseers, and hate really clever practical engineers, because they refuse to conform to their ways of wasting the public money.

ONE OF THE VICTIMS.

Madras Presidency.

A BORGIA RING.—At the last meeting of the British Archæological Association, Mr. Pettigrew, F.R.S., in the chair, the Rev. C. H. Hartshorne exhibited the signet ring of the celebrated Cæsar Borgia. This remarkable object of Roman art is of gold, slightly enamelled, with the date 1503. Round the inside is the motto, *Fays ceque doys avien que pourra.* A box drops into the front, having on it BORGIA, in letters reversed, and round it the words, *Cor unum, una via.* At the back is a slide, within which it is related he carried the poison he was in the habit of dropping into the wine of his unsuspecting guests. The signet is contained in an elegantly chased silver box, surmounted by a jewel.

GARIBALDI.

FAREWELL! England's honour'd guest!
England's blessings on thee rest,
For that thou hast stood the test,
Garibaldi!

Not from party love or spite;
Not some old grudge to requite;
Not to prop up wrong 'gainst right;
Garibaldi!

Leapt thy sword forth from its sheath;
March'd thy volunteers to death,—
Murm'ring with their failing breath,
"Garibaldi."

But to break thy country's chain;
Freedom for her sons to gain;
Fellow-sharer in their pain,—
Garibaldi.

Thus in honouring thy name,
England honours ev'ry aim
Freedom's jewel to reclaim,
Garibaldi.

And may heroes still to be,
When they bend their gaze on thee,
Learn that deeds of bravery,
Garibaldi,

Not alone suffice to earn
England's reverence: may they learn
Self-denial, when they turn,
Garibaldi,

To Caprera's rocky isle;
Patience when they strive to smile,
Suff'ring wrongfully the while,
Garibaldi;

Proud respect to honour'd laws,
That thou, from a tyrant's claws,
Wrench'd a kingdom! Then didst pause,—
Garibaldi,—

With thy hand upon the crown,
Which one word had made thine own!
At Another's feet laid down,—
Garibaldi,—

What thy sword alone had won!
This the cause why ev'ry son
Of England, with admiring tone,—
Garibaldi,

Shouts aloud thy honour'd name,
Which we glory to proclaim—
Glory in thy well-earn'd fame—
Garibaldi!

R. F. H.

INSTITUTE OF PAINTERS IN WATER COLOURS.

THE thirtieth exhibition of the one-while "New Society of Painters in Water Colours," consists of 323 pictures; and though the works of two or three of the members who have heretofore furnished chief features of the gallery—Mr. Haghe and Mr. Henry Warren, for example—are not so prominent as usual, the collection as a whole is an excellent one. The most ambitious figure-picture is a triptych, by Mr. Tidey, "The Night of the Betrayal," 253, whereof the two outer leaves are more satisfactory, as it seems to us, than the centre. It may be said to be "washy," but is, nevertheless, a work of great merit. Mr. Edward Corbould illustrates in his own peculiar manner the "Morte d'Arthur," 282. It is a very elaborate production, and must be placed amongst his most successful works. A portrait of a *piquante* light-haired lady, playing with a little hairy dog, "Fluffy," by Mr. J. M. Jopling, will not be overlooked by any visitor to the gallery. It shows great advance in technical power. Six or seven landscapes, by Mr. George Shalders, mostly with sheep, are amongst the gems of the gallery. Of Mr. Edmund Warren's contributions we must say the same. Mr. Chas. Vacher comes out strongly with views in Egypt, whence he has recently returned. 7, "Amalfi, in the Gulf of Salerno," T. L. Rowbotham; 23, "View of Ingleborough," H. C. Pidgeon; 29, "Windermere by Sunset," A. Penley; 47, "Stokesay Castle, Salop," J. H. Mole; 186, "Doorway, south side of Rouen Cathedral," W. W. Deane; 315, "A November Day in Nantfrancon," J. C. Read; and some of Mr. Fahey's, are good landscapes. 76, "The Beacon," John Absolon; 203, "The Eleventh Hour," Elizabeth Murray; 262, "The Snake Charmer," Carl Werner; and others, deserve notice. Mr. C. Cattermole gives promise: but he should try his subjects by the test of truth. Does he think, for example, that the casting of the Perseus by Cellini was done in the manner he has presented?

LIGHT FLOATING PROJECTILES.

JOSEPH NOVI, formerly an officer of the Neapolitan artillery, perceiving from the year 1842 the defects of the parachute rockets, light balls, and other illuminating implements, conceived a projectile formed of a hollow globe or case of fusible metal, filled with a composition similar to Indian fire or blue light, consolidated by a combination of various resinous solutions. The fire was transmitted by a fuse, and an almost inextinguishable composition, gradually increasing towards the great section of the globe. Guns, mortars, and howitzers might discharge these light balls, in the same manner as common shells, from which they differ, the sides being less thick, and with alloy, so as to enable them to bear fusion. The inventor claims to have produced a fire-work similar to the ancient Greek fire. Purified petroleum and naphtha, camphor, resins, combined with different oils, fused saltpetre, and cotton, rendered nearly fulminating,* were employed, to procure an inextinguishable flame.

Mr. Novi has now improved this light ball by enclosing the composition with vulcanized guttapercha, lined with sulphuretted copper, combining therewith the etherised essences (*vives essences*) of bituminous substances. This projectile may be fixed to a wooden disk (*sabot*), put into an uncovered common case, and fired from cannon or howitzer. If the composition be contained in wooden cylinders, like the safety cable of the life apparatus, the same effect will be produced. There are many circumstances under which such a projectile might be very useful.

THE ARCHITECTURAL ASSOCIATION.

THE ordinary meeting of members was held at the House in Conduit-street on Friday evening, the 15th inst.

The chair was occupied by the Vice-president, Mr. J. H. Christian.†

Mr. J. D. Mathews (Hon. Sec.) said that, on making inquiry, he had ascertained that the Society of Arts had not yet arrived at any decision with reference to the prize drawings for model cottages; but that he had been given to understand that after the award had been made, the drawings would be exhibited.

Mr. T. Blashill announced that the architectural examination class would meet on Tuesday next; and that several interesting papers had been promised on the following subjects:—Timber (strength of), Brickwork, Masonry, Vaulting and Groining Timber-roofs, Plumbing, &c.

Mr. E. J. Tarver then proceeded to read his paper on the desirability of establishing a School for Figure Drawing from Living Subjects. This will be given hereafter.

At the conclusion,

Mr. Burges observed, that he had very little to add to the able paper of Mr. Tarver. He approved of the recommendation of that gentleman to begin with a skeleton, but he would not advise the student to devote too much of his time to that particular department. If, however, the human figure were drawn alongside of the skeleton, the student would by degrees be able to get a competent knowledge of anatomy without much trouble. With regard to finding a room in which to establish their school of drawing from the life, he would suggest that they should apply to the Institute up-stairs for the use of one, and to keep knocking at the doors until the Institute either opened their own doors or found an asylum for them. With respect to the preparation of drawings of sculptured subjects by architects, he thought it would be far more desirable that they should make small sketches, rather than attempt cartoons, for which the commission of 5 per cent. did not supply any adequate remuneration. His advice, therefore, was to prepare a small drawing, to be afterwards developed and improved upon by the person to be charged with the execution of the work. In olden times, there was little difficulty on this head, as the architect usually combined in his own person the professions of the painter and the sculptor. In those days the architects were not paid 5 per cent., and they did not in all probability hold a similar social position to that

* *Vide* Battista Martena Flagello Militare. Napoli, 1676.

† The following gentlemen were, on ballot, elected members of the Association:—Mr. J. T. Allen, Wish House, Southsea; Mr. J. S. Quilton, 3, Harley-road, West Brompton; Mr. W. C. Henman, 7, Milman-street, Bedford-row; Mr. A. C. Browne, 2, Verulam-buildings, Gray's Inn; Mr. M'Callum, 25, Westbourn-place; and Mr. C. Malseh, Pimlico.

hich the architect now enjoyed. There were course exceptions to the rule. Raffaelle, for stance, lived like a nobleman, and received incely honours at his death; but, as a general le, the architects of olden times were not what light be called gentlemen. He was glad to see e members of the Architectural Association aking a move in the direction suggested by r. Tarver. He hoped, too, it would continue, r it was the only indication of progress which e was able to discover.

Mr. Ridge observed that, in his opinion, the reat objection to students of architecture ining existing life schools was, that they ould have to conform to a certain routine, hich in their case would be unnecessary. He dvocated, therefore, the establishment of a urely architectural class, whose object would e fixed and definite. Looking to the experience erived from other classes connected with the ssociation, he saw no reason to doubt that a fficient attendance would be obtained. He sugested, however, that as the question of expense as of primary importance, the subject should be eferred to a committee, who would make the ecessary inquiries, and report the result.

A member said that he feared Mr. Tarver had nder-estimated the cost of the school or class hich it was proposed to establish. From his wn experience he could state that models (unde r draped) were not now to be had on the econolical scale suggested; and that the other accesories would prove more costly than Mr. Tarver ppeared to suppose.

Another member said, that as the question of ent might prove an obstacle in the first instance, he would be happy to place a room in is house at the disposal of the school for one or wo evenings each week.

Mr. Mathews suggested whether it might not e better to think over the matter, and confer with Mr. Gilbert Scott (from whom the first suggestion of the school had been derived), so that beginning might be made in the autumn.

Mr. Lewes thought they ought not to begin in small way, and that before committing themselves to any definite scheme, they should endeavour to get subscriptions or a grant of money rom the Institute.

A member suggested that a committee might e formed to consider the question of modern costume, and that they should endeavour to bespeak a favourable reception for whatever dress hey might suggest by adopting it themselves.

The Chairman said he approved of the paper read by Mr. Tarver, and of the suggestion for the establishment of a school of figure drawing, as an adjunct towards that proficiency in drawing generally which it was so useful and necessary for the architect to acquire. He also approved of the suggestion, that they should knock at the doors of the Institute; for he believed that body would not reject the proposition in the manner apprehended by some of the speakers. The reference of the whole subject to a committee of the Association might, however, be desirable in the first instance.

Mr. Blashill quite approved of making the experiment, and expressed his opinion that it would be desirable to make a commencement as soon as possible. With regard to modern costume, he was aware that Mr. Burges, in his Cantor Lectures, had done all he could to throw ridicule upon it; but, in his opinion, it was not deserving of it. The costumes of all nations were generally determined in great part by the varying circumstances of each; and that our costume was suitable and convenient, if not as picturesque as it might be, was proved by the fact that it was popular. Like all other human institutions, it was, however, susceptible of amendment; but he for one was not prepared to visit it with unreserved condemnation.

After some further discussion, the proposition to refer the subject to a committee was adopted.

A vote of thanks was passed to Mr. Tarver for his paper.

The Sheffield Waterworks Company.—The directors of the Sheffield Waterworks, in the report submitted to the shareholders, recommend that the question of the general liability of the company, for the damage occasioned by the bursting of the reservoir, should not be disputed. They propose that legitimate claims should be fairly and promptly met, leaving the shareholders the duty of determining how the money is to be raised. The directors still have faith in the prospects of the company, notwithstanding the disaster which has swamped their resources.

COMPETITIONS.

Museum and Albert Memorial, Exeter.—Twenty-three plans were sent in competition for the premiums offered for the best designs for an Albert Memorial Building at Exeter. After examination of the plans, the sub-committee, on the 22nd of March, resolved,—

"That the plan numbered '5' was entitled to the first prize; the plan numbered '15' to the second prize; and they commended plan numbered '16' for its internal arrangement."

At a meeting of the general committee, the sealed letters were opened, and it was found that the plan "No. 5" belonged to Mr. Jno. Hayward, of Exeter; plan "No. 15" to Mr. J. Philpot Jones, 21, Whitehall-place, London; and plan "No. 16" to Mr. W. F. Cross, Exeter. The committee purpose to exhibit the plans to the public, provided the authors of them consent to the exhibition of their works.

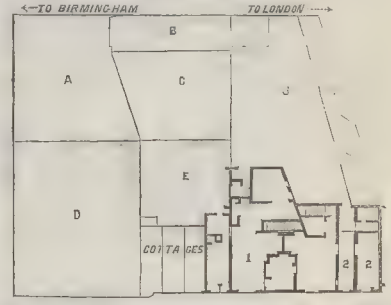
Ashford.—The committee selected twelve designs, and then resolved to limit the outlay to 3,000*l.* They reduced the number to six, putting aside those which exceeded that amount. The mottoes of these six are "Civis Romanus;" A O in circle; "'Tis good to begin well;" "'Tis better to end well;" cross compasses in circle; and "Pro rege, lege, grege." These were referred to Mr. Joseph Clarke to report on. The design with last-named motto has since been selected, and is found to be by Mr. H. J. Austin, of Hereford-road, Bayswater.

WORKING OF THE PUBLIC WORKS ACT AT MANCHESTER.

In the course of some remarks on this subject in the town council, a statement was read, to the effect that at the Prestwich reservoir, where cotton spinners were employed, "whilst the work was near the surface, and the soil to be removed was light and sandy, the men earned reasonable wages; but when the solid clay was reached and the excavation became difficult, the same men did not earn more than fivepence per day; and, as might be expected, they soon abandoned that part of the work. The contractors then put on a gang of their own trained navvies, who, for the same work, and at the same rate of pay, earned 3*s.* 10½*d.* per day." The loans already agreed to be made to the corporation, are for the execution of the following works, viz.:—

1. The purchase of land for, and the formation of, a public cemetery (25,000*l.*).
2. The extension of waterworks (30,000*l.*).
3. The severing and paving of new streets, and the repairing and otherwise improving the condition of public highways in the several townships of Chorlton-upon-Medlock, Ardwick, and Cheetham (61,000*l.*).

With respect to the works referred to in No. 3, the corporation had always entertained the opinion that it would not be practicable to employ to any great extent the unemployed operatives. So far as the cemetery is concerned, the land is purchased, and the contract with Mr. Gay has been signed. In the execution of these works, the corporation feel confident they will be able to secure employment for a considerable number of operatives. With respect to the waterworks, the only works yet undertaken have been the obtaining, removal, and preparation of clay for the reservoir intended to be formed at Prestwich. On the 28th ult. there were 309 able-bodied operatives receiving relief. Efforts are being made to secure a site for the new public park for Chorlton-on-Medlock and Hulme, as there is little doubt the loan of 30,000*l.* will be obtained under the Public Works Act.



THE BIRTH-PLACE IN STRATFORD-ON-AVON.

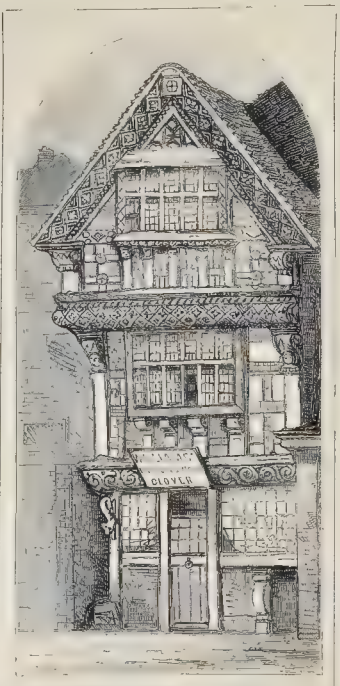
With a better fortune than has been the lot of many of the places connected with our eminent men, the house in which Shakspeare first saw the light now stands, after experiencing various vicissitudes, with much the same appearance that it presented three hundred years or so ago. Recently we gave some account of its restoration, and glanced at the uses to which portions of the interior are now devoted. So great, however, is the interest which is attached to this subject, especially at the present time, that we are led to annex some engravings which will afford a better idea of the past and present aspect of this famous spot than any mere written description.

From an examination of prints and drawings of the houses in Henley-street, which are still in existence, it is clear that as far back as the reign of Henry VII., and perhaps before this date, a substantial dwelling stood here, isolated from other buildings; backed by cherry and apple orchards and garden ground. Probably it was originally one mansion, occupied by a family in good circumstances. However this may be, the house is described, during William Shakspeare's life-time, as consisting of two messuages, two gardens, and two orchards, with their appurtenances. The tradition that the poet was born in this house in 1564, six years after Queen Elizabeth began to reign, has never been disputed; but there is no actual evidence that he was born on St. George's day, the 23rd of April, in the above-named year. The register-book of Stratford shows that the future dramatist was baptized on April 26th; so that, if he were born on St. George's day, he must have been only three days old when the baptism was solemnized. It is certain, however, that early christenings, particularly when the child showed indications of weak health, were common. Nor is there anything except the tradition to show that John Shakspeare was in possession of this property in 1564, when his eldest son was born; but the persevering investigation of Mr. Halliwell has brought to light a deed dated 1596, which proves that the two houses in Henley-street were purchased by John Shakspeare, for 40*l.*, in 1575. At this time William would have been eleven years of age. Considering the discoveries which have been recently made, we should not despair of finding documentary evidence which will confirm the early traditions connected with the poet; but, in the meanwhile, until evidence can be shown to the contrary, we must be content with tradition. In this house, there can be but little doubt the seven children of John Shakspeare and his wife Mary Arden, of whom William was the eldest, were born; and here John Shakspeare died, after experiencing pecuniary difficulties.

At the time of his marriage with Mary Arden, the youngest daughter and co-heiress of Robert Arden, of Wilmcote, Shakspeare's father was a man of good condition, who, no doubt, had "two gowns," and everything handsome about him. He had been a glover—a trade which was formerly extensively practised in Warwickshire. He afterwards became a wool-dealer and farmer.* He also received a little property through his wife, in 1565, when the eldest son was a year old. John Shakspeare was an alderman,; and, in 1569, was high bailiff of Stratford; but, as the children grew and increased in numbers, misfortune appears to have come upon the family.

Various circumstances seem to show that the poet's early and, it is said, unhappy marriage was

Plan of the Shakspeare Property in Henley Street, as shown in the Account of the Birthplace, 1824.



References.—1. Apartment below the room in which the Poet is said to have been born, which was long used as a Butcher's shop. 2, 2. Bar and parlour of the Swan and Maidenhead Inn. 3, 3. Plot of ground sold by Thomas Hart to Alderman Payton in 1771.

* It is worthy of remark, that even at the present day, it is not uncommon for the tradespeople of Stratford-on-Avon to combine several kinds of business, or to exchange that to which they have long been accustomed for some other.

BITS FROM STRATFORD-ON-AVON.

in some measure forced upon him by debt and difficulty; and that, at the early age of twenty-two, Shakspeare was driven from Stratford by trouble and anxiety. In 1578, John Shakspeare mortgaged his estate of Asbies, that came to him with his wife, for 40*l.*; and in 1579 sold other property in Snitterfield. In 1580 he became involved in a Chancery suit about Asbies, which was undetermined in 1597. In 1586, in an action for debt in the Bailiff's Court, there is a record of a warrant of distress issued against him, with "nothing to distrain upon," as the return to it; and in the same year his name was struck off the roll of the corporation. Notwithstanding, the Henley-street property does not appear to have passed from the Shakspeare family; and part of the premises was occupied by Mrs. Hart, the favourite sister of the poet. The success of Shakspeare in connexion with the stage must have been both rapid and brilliant; for, in 1597, when thirty-three years of age, he purchased New Place, the best house in Stratford-on-Avon, and altered and fitted it for his future residence.

For the greater part of two centuries the house in Henley-street, divided into two tenements, was but little altered in its outward appearance. In an old print dated about a hundred years ago, the birthplace is shown, with the dormers and gable, the porches and other peculiarities which have been recently added. But for this print it would have been difficult to obtain authentic particulars on which to carry out the work of restoration; for the pecuniary circumstances of the possessors of this property (the Hart family) declined, the house became subdivided, and many of the old picturesque features were destroyed. At one extremity the old wood timbering had been covered with the modern brick front of the "Swan and Maidenhead Inn;" and at the other there were planted some mean-looking cottages, in the ground floor of which were small open-windowed shops; and from the roof the dormers, which formerly, as they do now, were important features of the building, had

OLD HOUSE AND SHOP IN THE HIGH STREET.

entirely disappeared. More description is, however, not necessary, for the accompanying engraving is a careful illustration of the place, as it appeared before the restoration was commenced.

John Shakspeare died in 1601, and the property in Henley-street passed to the dramatist. Joan Hart, the sister of William, resided in one of these tenements until her death; and the Hart family remained in possession until 1806, when William Shakspeare Hart sold the houses to Mr. Thomas Court, by whose family the premises were afterwards sold to a committee for the public.

It is satisfactory to know that the place in which our greatest poet first saw the light is now in good and substantial condition; and that it is placed in the custody of those whose successors will cause this quaint and interesting building to retain its present appearance in centuries which are yet to come. In this way Shakspeare's house will have a double interest, for the English buildings of this style are rapidly disappearing; and, two or three centuries hence, this house will have become an architectural curiosity.

RONDEAU SUR SHAKSPEARE.

23 AVRIL, 1864.

C'est noble et grand de célébrer Shakspeare!
De présenter un hommage à sa lyre,
Dans un sonnet ou bien dans un roudeau
D'examiner en lui ce qui fut beau,
A l'univers afin de le redire.
D'un monument de marbre et de porphyre
De tous les yeux qui soit le point de mire,
C'est noble et grand de lui faire cadeau.

C'est noble et grand de célébrer Shakspeare!

Il fait surgir la terreur ou le rire,
Nous peint l'amour ardent et son délire,
Avec un tact, un goût toujours nouveau;
Sa verve est grande, et son style un joyau,
Qu'à chaque instant on cite et l'on admire.

C'est noble et grand de célébrer Shakspeare!

LE CHEVALIER DE CHATELAIN.

EXTERIOR OF THE BIRTHPLACE, BEFORE ITS RESTORATION AND SINCE.

THE RANDOLPH HOTEL, OXFORD.—Mr. Wilkinson, Architect.

RANDOLPH HOTEL, OXFORD.

THIS building has just been commenced. It will stand at the corner of Beaumont-street, and opposite the Taylor and Randolph Institution, erected, some twenty-four years ago, by Professor Cockerell; likewise facing Magdalen-street, and opposite the Martyr Memorial, a well-known piece of work by Mr. Scott. Within view of the hotel will be the Colleges of Baliol and St. John, the churches of St. Mary Magdalen and St. Giles, and the whole of St. Giles's-street.

The site purchased for the hotel is freehold, and contains almost an acre of ground. The building has been designed with a view of making it a first-class hotel, and every new appliance will be introduced to render it as complete as possible. The plan is arranged so that several suites of rooms may be let off (without interfering with the working of the hotel), and which will possess all the comfort and quietude of private dwellings.

The basement plan contains the kitchen, scullery, bread and pastry rooms, bakehouse, larders, icehouse, wine and beer cellars, rooms for linen, knives and clothes cleaning, strong closets, servants' halls, a few servants' bedrooms, and a telegraph-room. The ground plan contains a coffee-room and library, 65 feet by 27 feet; a dining-room and room for public purposes, 34 feet by 27 feet; commercial-room, lavatories, bar, servants' rooms, a spacious entrance-hall, smoking-rooms, and conservatory. The one-pair plan are private dining-rooms, ladies' coffee-room, sitting-rooms, and eighteen bed-rooms. On the second-floor are twenty-one bed-rooms and sitting-rooms, and on the two upper floors are twenty-nine rooms, making a total of sixty-eight rooms on the four floors, besides bath-rooms, water-closets, lavatories, and servants' rooms. A Portland stone staircase leads from the ground-floor to the various landings and corridors, which are fireproof; so is also a considerable portion of the ground-floor.

The hotel is undertaken by a joint-stock company, to supply a want generally felt of first-class accommodation in Oxford. The architect is Mr. Wilkinson, of Oxford; the clerk of the works, Mr. Cleland. The contractors are Messrs. Kirk & Parry, of London. The cost of the building and fittings will be 18,000*l*.

PROVINCIAL NEWS.

Blackburn.—A new Reform Club-house is about to be commenced in Victoria-street, Blackburn. The building is in the Italian style of architecture, the front being of stone. The entrance-door and windows of the ground-floor are finished with carved key-stones and spandrels, above which is a projecting balcony supported by carved cantilevers on a level with the first floor, the windows of which, and the floor above, have columns and carved caps in the reveals, and are finished with carved key-stones, and also Corinthian columns between the windows. The whole is completed with block-cornice and parapet, with carved vases, and a Mansard roof, with ornamental iron cresting round the lead flats. The interior arrangements comprise an entrance-hall and reading-room, with staircase leading to the assembly-room on the first floor, and billiard-room above, and also to the committee and other rooms set apart for the convenience of the club. The cost of the entire premises, exclusive of furnishing, will be about 4,500*l*. Mr. B. Abbott, of this town, builder, is the contractor; and the whole of the works are to be carried out from the plans, and under the superintendence, of Mr. James Patterson, architect, of Blackburn.

Lumley Castle.—The additions and alterations at this seat of the Earl of Durham are making progress towards completion. The whole of the new works have been designed by Mr. Sydney Smirke, and are being carried out under the immediate superintendence of Mr. Leighton, clerk of the works to his lordship. One of the chief buildings is the great hall, which will be covered with an open timber roof, with moulded principals. This is being made and fitted up by Messrs. W. & C. Burnup, of Newcastle, builders.

Jarrow.—Building operations are at present being actively proceeded with at Jarrow, Hebburn, and Hebburn Quay. At Jarrow two hundred new houses are being erected by the workmen of Messrs. Palmer, Brothers. This is exclusive of great numbers of houses being built by other persons. Workmen are also at present engaged in erecting new coal staiths at the Jarrow Iron Works.

NEWS FROM SCOTLAND.

Edinburgh.—A proposal, often mooted, to establish in Edinburgh a college hall in connexion with the University, is now made in a practical shape. A joint-stock company, on the limited liability principle, has been formed, and shares to the amount of 7,600*l*. subscribed in furtherance of the undertaking, the nature and aims of which are set forth in a prospectus just issued. The site which the council have in view for the proposed building is a large triangular area opposite the City Workhouse, bounded by the Forrest-road, Bristo-street, and Teviot-row. The situation is open and airy. The designs have been prepared by Messrs. Peddie & Kinnear, and a lithographic sketch has been circulated with the prospectus. This view represents the principal front, which faces south-west, and looks straight to the entrance to the Meadow-walk. This front is 170 feet long, and is composed of two advanced wings and a main building or curtain connecting them, in the centre of which is a steep-pointed and somewhat slender belfry tower. The northmost wing is composed of the building at present on the site and immediately at the back of the Free Church, which building was originally erected for an industrial school. The style of the building externally is that variety of Gothic common in the domestic and municipal buildings of Belgium, and which is a lighter and less stronghold-like variety of the Scottish baronial. The main front of the building is in three stories—ranging in height with the two stories of the present building to be used as dining-hall and library. The windows of the two lower stories are divided by mullions and transoms, and have segmental and curved heads. The upper row of windows rises somewhat above the eaves of the steep roof, and their gables, supported by buttresses and pinnacles, are made important features in the design. The two projecting wings terminate in gables ornamented with crockets and finials; and, corbelled out at each corner at the level of the first floor, are large circular turrets in two stories. These turrets have large windows, and form a kind of conical roofed projecting oriel from the corners of the rooms.——A public meeting has been held in furtherance of the project for the establishment of a workmen's club and institute. It is proposed to rent a large hall in the middle of the town, and the total expense would be about 200*l*. for the first year, which would require about 480 members, at 2d. a week to render it self-supporting. Resolutions were agreed to promotive of the object in view.——The Edinburgh scavengers have struck work, the cause of complaint being night work and Sunday work. Officials have been sent to Glasgow and Dundee to raise a new force, and placards have been issued through the town calling for men at 15s. a week. The streets, particularly in the poorer quarters, are already in a filthy and offensive state. Altogether about 200 men are on strike, and some who were willing to work were prevented.

Perth. An endeavour is being made to have the statue of the late Prince Consort, for which subscriptions are being collected, cast in bronze instead of being set up in stone. From 150*l*. to 200*l*., however, are still wanted of the sum requisite for the stone statue, and the subscribers have therefore resolved to carry out the memorial as originally intended.——The lands and castle of Balthayock, in this neighbourhood, after remaining for five or six hundred years in the hands of the Blairs of that and other lks, within the last year or two were purchased by Mr. Samuel Howard, late of Stanley. Mr. Howard began forthwith to make improvements, first on the dwelling-house, and then on the old castle immediately adjoining. The castle is grey with old age, save where (which is in most places) its massive old walls are covered with luxuriant and venerable ivy, which clings to them so tenaciously that you might climb to the summit through its branches. The castle walls are so ancient, that neither history nor tradition, it is said, assigns any date to them. They are about 12 feet thick in the basement story, and about 7 feet in the summit one. A spiral staircase winds up through them from what was once the dungeon-keep. The castle was fire-proof. For a long time past it was unroofed, and the upper arch was partly broken. That has been repaired, and the whole is now covered with a roof, in keeping with the general aspect of the building. The length of the walls is about 52 feet, the breadth 39 feet, and the height 55 feet. Apart from the dungeon there are only two rooms. The lower one is being fitted up as a dining-hall; the upper one as a picture-gallery. The restoration is not yet completed. More joiner-work than any other has been required, and this is being performed by Messrs. Pullar & Keay. Mr. Annan has taken the plaster-work; and Messrs. Frew & Son the plumber-work.

Aberdeen.—The ceremony of cutting the first turf of the aqueduct of the new gravitation water-works, for the supply of 6,000,000 gallons of water per diem from the Dee at Cairnton to the city has just been cut by Sir Alexander Anderson, of Bielack, the Lord Provost, who, in his address on the occasion, referred to the contractor, Mr. Gibb, as being the fifth generation of a family of most respectable contractors, who had distinguished themselves in many important works; while, during these five generations, they had always paid 20s. in the pound.

CHURCH-BUILDING NEWS.

Oakham (Rutland).—At a meeting of the church spire restoration committee, the following tenders were received for taking down the church steeple a certain distance from the top:—*Mr. J. Brown, builder, 170l.*; and Mr. Cave, 146*l*.; when the latter tender was accepted.

Wokingham (Berks and Hants).—The parish church of St. Mary, Wokingham, has been reopened. From lapse of years and other causes the edifice had fallen into a state of decay, and was choked with unsightly fittings. The chancel arch and its piers were in a ruinous state, and the outer walls of the fabric generally were in a very dilapidated condition. The present restoration consists in an entire rebuilding of the chancel, with its north aisle, and the addition of a south aisle and large vestry. The chancel arch also, and the arches to the north and south of it, have been rebuilt; as also the north and south aisles of the nave. The tower has been opened out to the rest of the church; but funds were wanting for the restoration so much needed of the tower generally: had these sufficed, it would have been put into repair, and heightened. Of the new work, in such portions as are restorations or intimately connected with old features, the original date of the work has been adhered to; but where, as in the case of the chancel, the building was new from the ground, Middle Pointed or fourteenth century work has been adopted by the architect. The new south chapel, however, has received the old windows and doorway from the former aisle of later date. The old Norman south door has been restored, and a new porch erected over it. A simple form of reredos has been adopted over the altar, and plain stone seat for sedilia and a credence niche; and the chancel is further furnished with light iron girdles in the side arches, choir seats, and low wooden screen in the chancel arch. The pavement is of Minton's tiles. The fittings in the nave are open sittings, and the old font has been refixed near the tower arch. Several painted windows have been presented to the church. The east window in the chancel, which is by Hardman, of Birmingham, was presented by Mr. Elliott Morres. The central figure represents the Crucifixion, and on each side the Evangelists. Above is represented our Saviour in glory, taken from the first chapter of the Relevations. On the left and right of this there are two figures, representing the Resurrection and Ascension. In the east of the south side aisle there is a memorial window; and, facing the south, another, presented by members of the Twycross family. The former window has the following subjects,—the Baptism, Crucifixion, Resurrection, and Ascension of our Lord, under Perpendicular canopies, with pedestals and inscriptions relative to each subject. The tracery contains devices of angels with crowns of glory, and palm branches. The south aisle window contains the subject of our Saviour raising Jairus's daughter, under a canopy of floreated ornament of the lily, with angels bearing a scroll with the words, "She is not dead, but sleepeth." In the tracery are figures of Faith, Hope, Charity, Piety, Prudence, and Devotion. These windows were designed and executed by Mr. W. Holland, of Warwick. The old solid chalk pillars still remain. The stone carving in the new work has been executed by Mr. Nicholls. Upwards of 21 feet altogether have been added to the length of the edifice. The church has been drained, and a heating apparatus applied to it, which was constructed by Mr. Potter. Mr. Woodyer, of Grafham, was the architect: Messrs. Lawrence were the contractors; and Mr. Edgington acted as clerk of the

:ks. The ironwork was by Messrs. Filmer & ison, of Guildford.

Barming (Kent).—A plan of repair of the old urch here was made by Mr. Hakewell; and, on ng laid before the parish, with the estimated pense, was approved and adopted. Accordingly chancel has been repaired, the roof renovated, old pews removed, and the church reseated. w stone windows have been made, and the wooden ones taken away. Messrs. Whittaker Whitehead also gave two new windows of inted glass. The money raised was 620*l.*, nich was expended as mentioned; but some ngs, as designed, still remained undone. But rything has now been completed.

Birchington (Isle of Thanet, Kent).—The re-oration of the church is shortly to be proceeded th. The chancel will be restored at the cost the Dean and Chapter of Canterbury; the ispe chantry, by Mr. H. P. Cotton, of Quex ark; and towards the thorough reparation of e tower and spire the Board of Trinity House s made a grant of 100*l.* It is also proposed open, repair, and re-tile the roofs; to raise the vel of the floor; to provide new seats of uniform naracter, enlarging the number of sittings from il to 542; and generally to restore the whole ructure. Towards this portion of the restora-on (the estimated expense of which is 1,000*l.*) ont 500*l.* have already been promised. Mr. N. Beazley is the architect.

Newport (Isle of Wight).—The *Isle of Wight Churchman* states that the church of Brading is ortly to be restored. A new roof is now ndertaken at the expense of Sir Henry Oglander, nd the reseating of the church is also in con-mplation. The restoration of the nave of Niton arish church is to be immediately put in hand. The chancel to Whitwell church is also to be efitted; and the restoration of Gafcombe church looked upon as a certainty. These three last-amed works are to be from designs by Mr. R. . Jones, of Ryde.

Hewelsfield (Forest of Dean). — The parish hurch of Hewelsfield, in the rural-deanery of he Forest, has been re-opened, after restoration nder the superintendence of Mr. Butterfield.

Whitwood.—On Easter Monday, the corner-tone of All Saints' Church, Whitwood Mere—ne of two places recently formed into parishes n that district, through the liberality of the ean and chapter of Christ Church, Oxford—as laid by the Hon. & Rev. P. Y. Savile, rector f Methley.

DISSENTING CHURCH-BUILDING NEWS.

Walsall (Staffordshire).—The foundation-stone f a new Wesleyan school chapel has been laid t the junction of Queen-street and Bridgman-treet. The site is sufficient to admit of the rection of not only a school capable of accommo-lating 200, but a chapel calculated to contain ittings for 500. The new building will cost bout 200*l.* and is of red brick, with dressings of white and coloured bricks. The chapel, which will be erected hereafter, will cost about 500*l.* or 600*l.* The plans of both buildings have been prepared by Mr. A. Beardsmore, of Darlaston. Mr. J. Wilkes, of Darlaston, is the contractor for the present building.

Leicester.—The new Congregational Chapel in Oxford-street has been opened. This chapel has been built for the use of the congregation re-cently attending the Harvey-lane chapel. The architects were Messrs. Shenton & Baker. It is built in a free rendering of the Lombardic style. The buildings, including school-rooms, are 110 feet in length by 54 feet in breadth, with an elevation in front of 53 feet. From the back part 36 feet have been taken for school purposes. The interior of the chapel is 74 feet by 49 feet 8 inches; the average height from floor to ceiling is 30 feet 8 inches. The gallery is supported by octagon pillars. The floor line is 10 feet above that of the chapel. The ground-floor is an inclined plane, rising 16 inches from back to front. The seats are arranged in a segment of the circle, each one inclining 4 inches. Access to the pews is given by two aisles. The seats in the gallery rise each one 13 inches above the other. The front is of open ironwork. The gas-fittings were supplied by Mr. Bramley. There are two sunlights in the ceiling, and brackets of a twisted cord pattern give additional light under the gallery. The school-rooms are behind. The boys' school is 32 feet by 24 feet: on either side is a class-room, 12 feet 6 inches by 10 feet, which, by means of sliding doors, can be thrown open to the school. On one side, in the hinder part of the building, is the minister's vestry and staircase; on the other side an infant school-room, 18 feet by 12½ feet. The height of these rooms is 13 feet 6 inches. The upper room is intended for girls: it is 50 feet 6 inches in length by 33 feet 6 inches in width. The height from floor to ceiling is 18 feet. At one end a senior class-room, formed by sliding-doors, and a teacher's retiring-room, have been provided. The cost of the building, including ground, will somewhat exceed 4,000*l.* The contractor was Mr. T. B. Collins. The woodwork was done by Mr. W. Clifton, and the ironwork by Mr. Richards. The staining, gilding, and glazing by Mr. W. Widdowson.

Cheltenham.—A committee has been formed for erecting a new church for the ministrations of the Rev. George Roberts on his expulsion from St. John's. The sum required for the building and endowment is 10,000*l.* Of this sum nearly 3,000*l.* are already subscribed.

Willenhall.—The foundation stone of a new school chapel, in connexion with the Primitive Methodists, has been laid at Lane Head. The structure will be a plain brick building, constructed to seat about three hundred persons, and the price, including site (the price of which was nominal), will be about 230*l.*

Knutsford (Cheshire).—The builder's contract for the erection of a new Wesleyan chapel at Knutsford, on the vacant plot of ground adjoining the savings-bank, in Princess-street, has been let to Mr. Massey, contractor, Chorley. The voluntary contributions already amount to something like 1,300*l.*; and it is expected that the work will be commenced without delay. Mr. T. R. Clements, of Knutsford, is the architect.

Lincoln.—On Monday, the foundation-stone of a new Wesleyan chapel and schools was laid, in the parish of St. Peter, at Gowts, by the Rev. H. H. Chettle, to be erected from the designs of Messrs. Bellamy & Hardy, architects.

STAINED GLASS.

St. Alban's Church, Worcester. A circular west window has been erected in this church. The subject is, "The Baptism in Jordan." The window has been erected, by subscription, to the memory of the late rector. Mr. F. Preedy was the artist.

Hereford Cathedral.—The accepted design for the memorial window which is proposed to be erected in remembrance of the late Archdeacon Lane Freer has been exhibited, according to the local *Times*, in a shop in High Town. This design is intended to fill the great window of the north transept of the cathedral, which presents a peculiar difficulty in treatment, owing to the fact that the number of lights is equal, thus precluding the pyramidal arrangement. Judging from the drawing, remarks our authority, we cannot say that the artist has succeeded in conquering this difficulty. Not only is there nothing in the upper part of the window conspicuous enough to form an apex to his design, but the two sides do not balance either in grouping or in colour. On the left hand there are two striking groups—the Crucifixion and the sending forth of the Apostles—against which the right side has only one, the Saviour in his exaltation. In the colouring, too, the predominant blue of the left-hand triplet of lights seems to outweigh the dominant ruby tone of the other half of the window. The chief subjects for illustration cross the triplets, within scroll-work. The two centre pieces are illustrative of "the Church Militant" and "the Church Triumphant." The former depicts Our Lord sending forth the apostles to convert the world and establish the Church. On the other side appears the Church Triumphant, in which the figures are grouped with thoroughly artistic effect. Here the Saviour appears enthroned in Heaven, surrounded by the blessed, bearing emblems of the Christian virtues; and the figures are similar in number to those opposite, enclosed in a scroll, the principal ornament in which are angels' faces. Underneath each principal compartment there are five of a minor character, the centre being larger than those by which it is flanked. Forming the base of the group illustrating the Church Militant are the following pictures:—St. Stephen distributing Alms; the Baptism of the Eunuch by St. Philip; the Shipwreck of St. Paul; and the Persecution of St. Paul in Prison. Below the Church Triumphant are five distinct groups, representing the angels of Heaven sealing the servants of God. In the base appear the emblems of masonry, in allusion to the fact that the deceased was the D.P.G.M. of the Province of Herefordshire. The spaces above the principal groups are divided into eight compartments on each side. Over the Church Militant are representations of St. Paul disputing with Festus, St. Peter and St. John confirming in Samaria, Angels with spiritual armour, the Martyrdom of St. Stephen, and St. Peter healing Æneas, with the Crucifixion of Our Lord as a centre. A similar number of compartments appear above the Church Militant, the principal representations in which are the Heavenly Jerusalem, Angels crowning and receiving the Just into Heaven—two compartments each. Above these are seven oriels, three in a triangle over each triple light, with a smaller one in the centre. These seven lights illustrate the seven gifts of the Holy Ghost. The apex is formed of a larger oriel, in which the descent of the Holy Ghost in the form of a dove is surrounded by six cherubim.

St. Asaph's Cathedral.—An east window has just been put up in the choir of St. Asaph's Cathedral, as a memorial of the late Bishop Carey and Mrs. Carey, both of whom have been great benefactors to the diocese by their bequests towards the building of churches, schools, and parsonage houses, and the relief of poor clergy. The window is the gift of the representatives of Mrs. Carey, Mrs. Levitt and Miss Sheepshanks. The stained glass is the work of Messrs. Ward & Hughes, of London. There are seven lights, forming in the arrangement of the tracery two distinct windows, with a centre compartment between them, which is devoted to the subject of "The Ascension." The three lights on either side contain in each two subjects from Our Lord's history. The reticulated tracery above the side-lights is occupied by the six Acts of Mercy, and the whole is surrounded by a cusped oval, in which is a representation of Our Lord enthroned in glory, bearing in his hand the orb and sceptre. The tracery (which harmonizes with the old original windows of the cathedral) is from a design of Mr. Gilbert Scott, and has been carried out under the direction of a local architect, Mr. Fairclough.

SANITARY MATTERS.

Kidderminster.—Under the head of "Preventible Disease at Kidderminster," *Aris's Birmingham Gazette* states that "an unpleasant discovery has recently been made in Kidderminster, testifying to an amount of ignorance of the simplest sanitary laws which is anything but blissful. Small-pox having been alarmingly prevalent throughout the past winter, and previous vaccination proving but a slight defence against the scourge, the attention of the sanitary inspector became directed to the condition of the spot where the disease appeared to have originated. The locality is described as not naturally unhealthy; but, from insufficient sewerage, and the neglect of the inhabitants, it has become so. In his researches, the inspector found that in one yard 'pigs were kept in a brew-house adjoining the house where children were affected, and the whole gutter drainage emptied into a grate under the pump trough, thus polluting the well. The tenants had dunghills also within two yards of their doors.' But this is not the worst instance. 'In another small and confined yard there was a pigsty, dung collected from the roads, a privy with the floor a foot below the yard, and ankle-deep with the drainage from the dunghill and pigsty, and a range of stabling, privies, and slaughter-houses, all adjoining'!" Lark Hill, described as "one of the most beautiful spots in the town," is now one of the least desirable residences; because, whilst it has become densely populated, it has not been provided with sewerage. The authorities, however, have turned their attention to the important question of the sewerage; and it is to be hoped they will also take measures for enforcing some degree of attention to sanitary requirements throughout the borough.

Rugby.—Messrs. Easton & Amos have been appointed engineers to the Rugby Board of Health, with the view of carrying out their plans for water supply, in preference to those of Mr. Hawksley for obtaining water from the river Avon. Messrs. Easton & Amos's plan consists in securing a supply by impounding the water of several small streams and the surface water from about 900 acres of land in two storage reservoirs.

Britonferry (Glamorganshire). — The Local Government Act has been adopted by the owners and ratepayers of the parish of Britonferry.

INCREASE OF MORTALITY IN LIVERPOOL.

AT a recent meeting of the Liverpool town council, Mr. Jeffrey presented the following tabular statement, compiled by Mr. Miller from the report of Dr. Duncan for 1861, and that of Dr. Trench, the present medical officer of health, for 1863 :—

Rate of the Mortality per 10,000 of the inhabitants of Liverpool for the years 1861 and 1863, showing the increase or decrease.

		1861.	1863.	Increase.	Decrease.
Parish of Liverpool		319	360	41	—
Borough of Liverpool		288	332	42	—
Scotland	Ward	308	296	—	12
Vauxhall	,,	351	347	—	4

Everton and Kirkdale	,,	51.2	76.5	25.3	49.2
West Derby	,,	41.8	58.6	16.8	40.0
North Toxteth	,,	57.9	74.4	16.5	28.5
South Toxteth	,,	83.0	131.3	48.3	58.0

The local *Journal* states that in the "talk on Change" there is great reluctance to admit the accuracy of these statistics, as "it is very difficult to believe the frightful deterioration in the health of the town which the returns presented to the council seem to show; and that proper inquiry should, therefore, be promptly made, before Liverpool is again represented to the world as one of the most unhealthy spots in it." Liverpool, however, has been frequently shown to be an unhealthy town, notwithstanding recent endeavours; and the reluctance of its merchants to admit the fact is of little or no force against such statistics as those produced.

LECTURES BY DR. FAIRBAIRN, C.E.

DR. FAIRBAIRN has recently been lecturing at the Dumfries Mechanics' Institute. There was an excellent attendance at the first lecture, but the attendance at the second was not so good, though the lecture was of a much more popular character than the first one, the subject of which was "Iron and its Appliances."

The lecturer began by saying that the extensive use of iron in aid of our manufacturing interests might date from the commencement of the present century; or, more accurately, from the close of the war in 1815, when a new era burst upon the country in the arts of peace. It must be in the recollection of many persons now living, how very imperfect our machines and mechanical constructions were as late as 1820. At that time the steam-engine had certainly attained a tangible shape in being composed entirely of iron; and millwork was just emerging from the state in which it was left by Smeaton and Rennie. Both of these engineers had introduced improvements by the substitution of iron for wood; and the latter, in his construction of the Albion Mills, was the first to supplant the old wooden wheels by the more compact and ingenious constructions of cast iron. Smeaton and Rennie may, therefore, be considered the pioneers of iron appliances. The lecturer went on to treat of the appliances of iron, 1st, to the steam-engine; 2nd, to mill work; and 3rd, to machinery; noticing the varied forms and conditions in which it is employed for security on the one hand, and its economical distribution for the purposes of construction on the other. In regard to the steam-engine, he dwelt at some length on the construction of boilers. On the question of engine-beams, he said,—"It has often occurred to me, in the exercise of my profession, that in engine-beams, as in bridges, a judicious combination of that material would relieve us from all anxiety on the score of security; and, moreover, it would establish a new and important era in the application of wrought iron in place of cast iron for the main beams of engines."

The subject of the second lecture was "On the Present State of our Knowledge in Science and the Useful Arts, as compared with the Past."

The lecturer began by saying that the last fifty years had been remarkable for the discoveries, inventions, and improvements made in every branch of art and science; and there was every reason to believe that the next fifty years would be no less remarkable for the development of material progress and mental acquirement. He would first consider the state of our knowledge of practical science as it existed a century ago; second, its progressive improvement; and third, its comparative value and influence on the present as well as future generations.

In speaking of the construction of submarine telegraph cables, Dr. Fairbairn said :—If a heavy weight were suspended to a piece of the cable, the copper wire, which is exceedingly ductile, would be drawn out, the gutta-percha covering would also expand; but on the removal of the weight the insulator, being elastic, would contract, but the copper wire would not go back; the result of which was that the contractile force of the gutta-percha had a tendency to double up the wire and push it through the insulator: so that when the cable was being paid out there was the risk, whenever the cable came in contact with the water, of the electric current passing into the sea, and the wire thus becoming useless. This showed how very cautious and careful they should be in the construction of such cables, in order to see that one part of the cable, when put to a severe strain, should harmonize with the other parts of it.

PROPOSED THEATRE IN MANCHESTER.

A LIMITED liability company has been formed in Manchester to raise the capital necessary for the construction of a small building adapted for various purposes of public amusement, including concerts, popular entertainments, and dramatic performances of a light character. The shares were taken immediately, without any appeal being made to the public. The site of the building will be at the western end of Oxford-street, nearly opposite St. Peter's Church. The theatre will be bounded on one side by Messrs. Henderson's warehouse, and will extend as far back as Bale-street.

The façade will be Italian, treated freely. The interior will be comfortably fitted up, and is intended to accommodate between 1,400 and 1,500 individuals, each of whom will have from 15 to 20 per cent. more room than is usually afforded in places of public entertainment. The stage, it is proposed to arrange in a novel manner, which will be carried out under the superintendence of Mr. William Beverley. Mr. E. Salomons is the architect; and Messrs. Metcalfe & Waterson have contracted to execute the works.

ROYAL HORTICULTURAL SOCIETY.

THE show on Wednesday was excellent, and was well attended. Minton's fountain is being erected in the gardens. A column has been stuck up, we hope temporarily, in a line with the fountain, so as to hide it altogether from those walking towards it down the centre path. On the Queen's birthday, 24th May, the gardens at South Kensington will be opened to the public at a low rate. An exhibition will be held, showing the various uses of flowers for the decoration of halls, drawing-rooms, balconies, churches, and buildings generally; also dinner and supper tables, hand bouquets, garlands, and floral devices of all kinds, for which prizes will be awarded. Lady amateur artists and Royal Academicians will be associated with the judges. On the evening of Wednesday, 25th May, the conservatory will be lighted for the first time, and there will be a *conversazione*, open exclusively to Fellows and debenture-holders, who will be received by the President.

TO DEADEN SOUND.

IN answer to your correspondent as to the best means of deadening sound, when altering an old house in North Lancashire, about four years ago, I met with the best deadened floor I ever saw. Long moss had been gathered in the adjoining woods, dried, and mixed with dry lime rubbish, and filled in between the joists. I adopted the same method in the new portion of the house with equal success. The moss has the advantage of being exceedingly light. The lime rubbish should be well screened and mixed with the moss, great care being taken to leave no part unfilled. The neglect of this is, in my experience, a very common cause of failure.

R.

THE POSITION OF THE ARTIST WORKMAN.

WHILE so much is being said and written respecting the position of the artist-workman, perhaps a few words from one of the craft may not be out of place.

I believe there is a very general feeling prevailing in the architectural world that the artist-workmen of the present day are not making that steady progress which the well-wishers of art could desire. In a paper recently read at the Architectural Association, and reported in your valuable journal, Mr. G. G. Scott alluded to this deficiency in very pointed terms, calling, at the same time, upon all thorough architects to assist to the utmost of their power the studies of the workman; for, said he (speaking of figure and animal sculpture), "We really, for the most part, dare not let our carvers introduce such subjects, for fear of making our whole work ridiculous; and even a grotesque animal, as a gurgoyle, in which the Mediæval sculptors were so wonderfully successful, becomes in the hands of our own simply contemptible." This is certainly a sweeping assertion, but in many cases too true. Still more recently the subject was touched upon by Mr. Beresford Hope, who suggested some admirable paths to improvement. In fact, there is scarcely a thinking man of the day who does not draw ugly comparisons between ourselves and the careful workmen of the Middle Ages.

But as there are always two sides to an argument, let us look at the question from an artist-workman's point of view.

I would ask these questions :—Are we considered by our architects as were the architectural sculptors of the Mediæval period by theirs? And does the award of employment go, as a rule, to merit, as was the case with them? Decidedly not: our system of working is totally different. Taking the average amount of carving done in this country, I will venture to say *one-half* of it comes to the carver, not direct from the architect, but through the hand of the builder. Of course the builder must have a profit from the work; and as builders, generally speaking, are not enthusiasts in art-matters, they get it done as cheaply as they possibly can. A man is looked out who has a reputation, not for *skill* and *taste*, but for doing the greatest amount of work in the shortest possible time. The "job" is finished, the architect not pleased, committee grumbles, and the builder makes excuses; the scaffold is cleared away, and there stands a fifth-rate carver's handiwork—as Mr. Scott justly remarks, "simply contemptible." Why should builders have this work under their hands? It is well known, and patent to every one, that they are not educated in a school to qualify them in the direction of such work. I have heard a statement made in defence of this principle, asserting that it would be difficult in many cases to get carving done at all if it were not included in the general contract; but I hold it would be better were it never done than that such absurdities should be committed in the name of art.

I beg also to call your attention to the system of competition in very many instances, even where the work comes direct from the architect. I will take, for example, a church to be carved. Carvers are invited to send in tenders: each one sends in his price, *in accordance with his acknowledged ability*, and, in nine cases out of ten, the *lowest one* gets it. This blunder no sensible man would attribute to the architect: it rests entirely with the building committee, who, preferring economy to skill, have the mortification of seeing an otherwise beautiful building covered with meaningless rubbish.

Then where, I ask, is the encouragement for the skilled artist? Is he to spend his hours studiously, carefully noting the best examples within his reach, searching every garden, wood, and valley in quest of Nature's beauties, labouring with an earnest love for his work, striving with all his energy to produce those wonderful forms and effects which make his art divine! Is it fair to bid him excel the studious masters of the past, and then put him in competition and on a par with some brainless fellow who has just sense enough to know that his works are next to worthless? I wonder what glorious old William of Wykeham would have said if any one had suggested such a competition to him? And if such a system had prevailed at that period, should we have cause to blush now when the early and modern works are placed in comparison?

The productions of the skilled workman are rated in competition by the price of his unskilful

ther. He has only to prefer *quantity* for *ity*, and employment is certain; or, if he ine on the ground of not being able to pro- good work for the money, he can stand out gether. A starved artist certainly tells iography, but in real life it is the reverse of sant; so he usually chooses the former se, trusting more upon his strong arm than rains for remuneration. This, I think, is one ne principal reasons why many architects are lid to trust their carvers, "for fear of making r whole work ridiculous." And such, I fear, continue to be the case while art is in a petition precisely similar to brickwork and ng.

AN ARTIST-WORKMAN.

Books Received.

Elementary Text Book of the Microscope. By W. GRIFFITH, M.D., &c. London: Van oorst. 1864.

author of this elementary work is also the joint author of the "Micrographic Dictionary." is a very competent writer on such a subject, ither for students or for adepts in the science Micrography. The present volume is illus- ed by twelve coloured plates, containing no than 451 microscopic figures; and it includes escription of the methods of preparing and unting objects, &c. The work is both interes- g and instructive,—with the plates, especially

VARIORUM.

The Speeches and Addresses of H.R.H. the nce Consort. London: Murray. 1864." This a cheap edition of these excellent speeches, l it contains some new matter not in the other tions.——"On the Economical Use of Fuel, and Prevention of Smoke in domestic Fire-places, h Observations on the Patent Laws. By F. wards, jun. London: Hardwicke. 1864." hough the author of this treatise belongs to ire-grate manufacturing firm, this is not a re advertising puff, but of general utility on subject of which it treats. It contains nu- rous sketches and descriptions of fire-grates various principles of construction, with re- rks on what the author regards as the best ms of domestic fire-places. Fire-brick and zed tiles are recommended for a considerable rtion of the fire-grate, instead of black iron.

Miscellanea.

ART UNION OF LONDON.—The general meeting, receive the Council's report and distribute e amount subscribed, will be held in the lelphi Theatre on Tuesday next. Each sub- iber's receipt will admit a party.

THE LANDSEER LIONS FOR NELSON'S COLUMN, TRAFALGAR SQUARE. — We perceive, from the vil Service estimates, that these lions are to st something more than 4,000*l.* apiece, or ,000*l.* for the four. From the same source we rn that 53,000*l.* is the sum to be asked of the tion for the purchase of land at Kensington re.

CARDINAL WISEMAN'S LECTURE AT THE ARCHI- CTURAL MUSEUM. We are requested to men- n, in consequence of inquiries on the subject, at the lecture by Cardinal Wiseman on the th instant will be published. The address by e president, Mr. Bereesford Hope, on the posi- on of the art-workman, is now in the press, opies will be sent to the subscribers to the useum.

WOBURN, BEDS.—Lord Charles Russell, ser- eant-at-arms, House of Commons, and half- ncle to the present Duke of Bedford, who had r some time acted as parish churchwarden, signed that office at the late Easter meeting, ving dislike to pulling down the church as his ason. According to a statement in the *tandard*, it will be carried out against the ishes of the great majority of inhabitants, old d recent; "two or three" only concurring in e "ambitious desires of a few years' resident cumbent." It is stated that 2,000*l.* would fectively improve the present church, and that e greater part of 12,000*l.* proposed for a new e might be well applied in charity, the town pos- ssing, amongst other deficiencies, "the poorest mshouses in that part of the kingdom."

THE RADNOR COUNTY SURVEYORSHIP. — Mr. Stephen Williams has been appointed to this office, in the place of Mr. Morton, who has resigned.

THE DUBLIN EXHIBITION OF 1864. This exhi- bition, which is to be opened in May, gives promise, it seems, of attaining successful results. Nearly double the amount of available space has been applied for by manufacturers and ma- chinists. There will be a large display of machinery in motion.

THE COPPER TRADE.—The price of copper has been reduced 5*l.* per ton, making 15*l.* since the 1st of March. The present price is, for tough cake, 98*l.*; best-selected, 101*l.*; manufactured, 105*l.*; yellow metal, 9¼*d.*; sheathing nails, 11¼*d.* per lb. This reduction is said to have been unexpected.

FREAKS OF LIGHTNING.—In a house at Felzius, near Figeae, struck with lightning, says a con- temporary, the flooring of the upper story was turned upside down, and all the nails disap- peared. All the locks and bolts were destroyed, and there remains nothing of a large press which was in one of the rooms. The owner of the house was in the act of unlocking the outside door at the time, and the key in his hand was cut in two by the lightning, without causing him any injury.

A DAVY MEMORIAL.—A committee of the working men of Penzance having raised 500*l.* towards a memorial of the late Sir Humphry Davy, two ladies of that town have offered to contribute 1,000*l.*, on the sole condition that the memorial shall take the form of almshouses. The *Cornish Telegraph* announces a further donation of 100*l.* by Mr. T. H. Bodilly, a mer- chant of Penzance, and the proffered assist- ance of the London Chemical Society in securing for his natal place a memento of the distin- guished chemist.

ROOFING AND PAVING THE HAYMARKET, LIVER- POOL.—It has been resolved by the Liverpool Council to cover the Haymarket, pave it anew, and light it at night with gas. The covered space will be used as a drill-shed by the local volunteers. The Council resolved on thus altering the whole area, although the Markets Committee only recommended 6,500 square yards to be roofed, and the whole to be repaved with boulders, at a cost not exceeding 6,210*l.*

TAYLOR PRIZES (IRELAND).—It is known that the sum of 2,000*l.* was bequeathed by the late George Archibald Taylor, of Dublin, for the pro- motion of art in Ireland. This has been applied to the establishment of a perpetual endowment for the encouragement of art students, the management of the scheme being intrusted to the Royal Dublin Society, in conjunction with the trustees of the will. For the year 1864 the trustees offer the following prizes, open to art students of Irish birth or attending a school of art in Ireland, to be awarded at an exhibition to be held on the 23rd of November, 1864, at the house of the Royal Dublin Society. 1. For the best drawing or cartoon in chalk, the figures to a scale of 3 feet (two or more prizes each), 10*l.* Subjects—"The Good Samaritan;" "The Meet- ing of Æneas and Dido, after the Shipwreck." 2. For the best landscape in oil colours, 20*l.* To be increased or lowered in amount, or wholly withheld, according to the merit of the works. All works must be delivered before two o'clock on the 14th of November, 1864, at the House of the Royal Dublin Society, Kildare-street, Dublin.

THE DENBIGH WATER WORKS.—We see from the *Carnarvon Herald*, that the town of Denbigh, not to be left behind in the march of improve- ment, has just supplied itself with that invaluable adjunct to health and comfort, "good water." It had long been an object greatly desired, so much so that a committee of the townspeople had offered a premium for the most feasible plan of supply, but as none were approved of, the premium was divided among the competitors. In 1862, Mr. William Richardson, civil engineer, of Birmingham, and lessee of the Denbigh Gas Works, found that there was a source at Llewesog, about three miles from Denbigh, peculiarly adapted for the supply by gravitation of a soft water, sufficient in quantity, at the usual average of consumption, for the increase of many years. A company was quickly formed, and the Act of incorporation obtained last session; and within ten months the works have been sufficiently executed for the water to be brought into the town. The principal reservoir is called the Myddelton Reservoir.

DOMESTIC HYDRAULICS.—A horizontal water- wheel, according to an American paper, has been recently invented, by which parlour-organs, washing machines, mangles, sewing machines, &c., may be worked in all houses where hydrants have been introduced.

STAGE FOOT-LIGHTS. — A. M. Subra has in- vented a new system of foot-lights, by which, it is said, much of the peril to artistes on the stage is avoided, and the nuisance of fumes streaming upward in their faces obviated. A third advan- tage is said to be its economy, to the saving of fifty per cent.

JESTING WITH "THE LAST ENEMY." — The fol- lowing laconic inscription is said to be engraved upon the tombstone of a person who had lived opposite to a churchyard: "Removed from over the way." This reminds one of the "disconso- late widow" who informed the public, on her husband's tombstone, that she still "carries on the tripe-shop round the corner."

ARTISTS' GENERAL BENEVOLENT INSTITUTION. The forty-ninth annual dinner of this Institu- tion was held in the Freemasons' Hall, on Satur- day, the 16th inst., with remarkable success, the Bishop of Oxford presiding. There was a very large attendance, and the donations and subscrip- tions announced amounted to 1,190*l.* Amongst those present were Messrs. R. Redgrave, W. P. Frith, Creswick, E. M. Barry, Hakewill, J. Turner, Gambart, Hurlstone, Farrer, Millais, Weekes, Dobson, Anthony Trollope, Faed, Hors- ley, Chas. Lucas, &c. &c.

RAILWAY WHEELS FOR PREVENTION OF ACCI- DENTS.—Mr. R. B. Greenwood has taken out a patent for a simple mode of preventing acci- dents from engines, carriages, or trains running off the line in consequence of obstructions on the rail. The invention consists merely in reversing the middle pair of wheels where six are used, or inserting a middle pair where not used, so that the flanges will run outside the rails while those of the other wheels run inside. The tendency of the old flanges to push the rails out of gauge, too, he considers will thus be obviated, and this cause of trains running off the line removed.

BATH ABBEY RESTORATIONS. — The following tenders were received for the external work pro- posed to be done at the abbey, under the speci- fication of Mr. Scott, architect, as approved by a former vestry. The tenders were separated into items for the fabric generally; the east window, the roof of the tower, the parapets, the roof of the nave, north and south aisles, and choir, and the cleaning and decorating the ceiling of the choir. The totals were as fol- lows:—Messrs. James & Price, of Cardiff, 6,551*l.*; Mr. H. W. Penning, Marlborough, 6,509*l.* 10*s.* 1*d.*; Mr. G. Pollard, Taunton, 5,799*l.*; Mr. G. C. Mann, Bath, 5,760*l.* 12*s.*; Messrs. Morgan & Lovell, Bath, 5,393*l.* 16*s.*; Messrs. Bladwell & Ambrose, Bath, 5,389*l.* 14*s.* The lowest was a little below Mr. Scott's estimate. The work is nearly all external, and includes wood, stone, and lead work. A committee, consisting of the rector, churchwardens, and other parochial officers, with a list of influential parishioners, has been ap- pointed to carry out the work and raise the necessary subscriptions.

BELLS FOR ST. HILDA'S, MIDDLESBROUGH.—A peal of bells for this church have been cast by Messrs. Mears & Co. of London. The bells are eight in number. The peal is in the key of G natural, and the tenor weighs eleven cwt. and three quarters. Each bell bears the founders' names and the year of casting. The following is a description of each bell:—

No.	Weight. Cwt.	qrs.	lb.	Inscription.
Treble	4	0	2	Presented by Thomas Vaughan. "Gloria Deo in Altissimis."
2nd	4	1	9	Presented by the Clay Lane and South Bank Iron Companies.
3rd	5	0	0	Presented by Gilkes, Wilson, & Co.
4th	5	2	17	Presented by Cochrane & Co.
5th	6	2	1	Presented by Hopkins & Co.
6th	7	2	12	Presented by Joseph Pease.
7th	8	1	20	Isaac Benson, Incumbent. Richard Bradley, Curate.
	John Shields Peacock, Beckwith Johnson Hopper, } Churchwardens.			
	John Storey, Francis Atkinson, William Rayner, Joseph Hodgson, } Sidesmen.			
Tenor	11	3	0	Presented by Henry Wm. Ferdinand Bolckow, and John Vaughan, and the motto "Venite Exultemus Domino."

The *Notts Guardian* states, that it is expected the bells will be ready for ringing in about a month. The entire cost of bells, frames, and other expenses, will be about 500*l.*

Concentration of the Law Courts.—In the Commons, the other day, Mr. A. Mills asked whether the Government had abandoned the intention to introduce a measure for this purpose. The present uncertainty had inflicted a very serious injury upon the owners of property. He knew a case in which a man had seventeen houses on the site selected. That person had been almost reduced to beggary by the interference of the Government; whereas his property had formerly brought him in 2,000*l.* a year. Mr. Cowper, in reply, said he was happy to inform the hon. gentleman that her Majesty's Government had a measure on the subject, which they hoped very shortly to introduce,—during the present session.

Land Societies.—The report read at the last meeting of the Conservative Land Society stated that the receipts for the half-year ending Lady-day, 1864, were 32,694*l.* 17s. 6d.; and the grand total, 733,841*l.* 16s. 1d. Shares of 50*l.* each had been issued since the formation of the society, representing a subscribed capital of 1,007,400*l.*, the actual cash receipts from all sources having been nearly 734,000*l.* The total sale of land amounts to 336,118*l.* 3s. 1d.; and the total withdrawals since the formation of the society to Lady-day are 218,650*l.* 17s. 8d.

Railway Matters.—The traffic receipts of the railways in the United Kingdom for the week ending 15th April, 1864, upon a mileage of 11,206, amount to 587,127*l.*, being equal to 52*l.* 8s. per mile. For the corresponding week of last year the receipts were 550,498*l.*; the number of miles open, 10,702¼, or 51*l.* 3s. per mile. A comparison of the two weeks shows an increase in the aggregate receipts of 36,629*l.*, and of miles open 443¾, being at the rate of 82*l.* 13s. per mile.——The preparations for commencing the masonry-work for the railway-bridge across the Mersey at Runcorn having been completed, the first stone of the Cheshire abutment has been laid. The foundation stone will be laid about this time next year, it is expected, by the Prince of Wales.

The Hotel Movement.—The Sablonière Hotel in Leicester-square, a noted resort of foreigners, is about to pass into the hands of a company, which is being got up for the purpose of enlarging and carrying on the hotel, with the assistance of the present or late proprietor, as manager. The same thing is being done with the Royal Sea House Hotel at Worthing, to which it is proposed to add a new wing. Preposterous as the conduct of hotel-keepers in this country but too generally is, we scarcely think anything in the shape of extortion can excel an item or two of which a correspondent of the *Globe* complains. A gentleman whose own house was filled with visitors, had quartered his son for a night, at 3s. 6d. for his bed, on the fourth story at the Grosvenor Hotel, explaining the circumstance, and that he would only sleep there. Here is the "little bill" presented to him first thing in the morning:—"To bed, 3s. 6d.; attendance, 1s. 6d.; not taking anything at the hotel, 2s. 6d.!—total, 7s. 6d.!" A still more absurd part of the story is, that an item of an advertisement in the hotel ran as follows:—"Cup of coffee, with hot milk, roll, and butter, 1s. 6d." So that had a cup of coffee, with hot milk, roll, and butter been ordered, he would have had 1s. *less* to pay than he was charged for "not taking anything."

Builders digging for Sand.—Much dissatisfaction has been expressed by the Shoreditch Board of Guardians in consequence of the contractors for the new workhouse having extracted a large quantity of sand from the ground, not necessarily in the exercise of their contract labours, but purposely for their own use and profit. Mr. Judson, one of the contractors, stated to the board, on an inquiry as to it reported in the *Shoreditch Observer*, that he was not aware it was contrary to their orders to dig out the sand. They were at first excavating for the drain, and gravel was found, and they extended it a little. They expected to find gravel and sand, and on that account their estimate was much lower than it would have been if no sand had been there. Whether any sand was found or not, the board would reap the benefit of it. Mr. Walker, one of the guardians, said that, in this case [a previous case of a like nature had occurred], they were digging the sand for about a fortnight, in direct opposition to the orders of the clerk of the works, and under the immediate observation of the architect and building committee. The clerk of works, it seems, had ordered the digging to be stopped, but was disobeyed; and he had not complained to the guardians or the committee till all the sand was dug out.

An Indian Inventor.—At Kaira, a carpenter some time ago invented a machine on the principle of the velocipede, which he proposed adapting for passenger traffic on a tramway. The inventor, says the *Times of India*, had the honour to submit his locomotive for the inspection of his Excellency the Governor, who was much pleased with the mechanical ingenuity displayed in its construction; and, besides giving the man a substantial reward, sent him a very rich turban.

A New "Ghost."—Mr. H. N. King, photographer, of Bath, according to a correspondent, is the inventor and patentee of a marvellous ghost. In this new invention, Mr. King claims superiority in every respect over any "ghost" yet produced. Under his new arrangement, he does away with the necessity of ceiling the stage, and can introduce any number of figures, each with perfect freedom of action, and without the least distortion. In addition to this, the "ghosts" of an entire set of furniture for a room can be shown at once on the stage, every object being clear and distinct. Mr. King, adds our authority, dispenses entirely with lenses as now used, and has reduced the whole to a formula so simple, that a child may with ease and safety work the machinery.

TENDERS.

For Wesleyan Chapel, Peckham. Mr. W. F. Poulton, architect.

Myers	£5,267	10	0
Tarrant	5,168	5	0
Streeter	5,062	0	0
Snaps n	4,960	17	6
Colls	4,882	0	0
Thompson	4,720	0	0
Downs	4,635	0	0
Sawyer (accepted)	4,377	0	0

The above amounts are in addition to the old materials on the site.

For the erection of school, New Cross-road, Deptford. Mr. S. K. Bland, architect:—

Jerrard	£493	0	0
Spillaw & Co.	480	0	0
Dearsly	479	0	0
Martin	478	0	0
Lester	390	0	0

For alterations at Homerton-road Chapel. Mr. S. K. Bland, architect:—

Hearle	£245	0	0
Dearsly	233	17	0
Brett	217	0	0
Skinner	183	10	0

For alterations and additions to house in Hungershall Park, Tonbridge Wells, for Mr. J. Stone Wigg. Mr. W. Bond, architect:—

Funk (carpenter)	£485	0	0

[ADVERTISEMENTS.]

STAINED GLASS WORKS. — HEATON, BUTLER, & BAYNE have REMOVED to their new and extensive Premises, KING STREET, COVENT GARDEN, W.C.

ADVERTISEMENTS.

BRIGHTON.—To CONTRACTORS, BUILDERS, and OTHERS.

SIDLEY & POTTER have received instructions from Messrs. Clayton & Blaker, owing to their dissolution of partnership and relinquishing the Town Contract, to SELL by AUCTION, on THURSDAY, APRIL 28th, 1864, at TWO o'clock to a minute, on the PREMISES, the Contractors' Yard, Windsor-street, North-street, Brighton, the whole of the valuable STOCK, including thirty fresh and useful DRAUGHT HORSES, a useful brown cob, thirty town carts, eight scavenging carts, one scavenging van, three broad-wheel waggons, broad-wheel timber carriage, thirty sets of thill and trace harness, stable implements, cast tubs, and scavenging tools. May be viewed the morning of sale, and catalogues obtained at the offices of the Auctioneers, 155, North-street, Brighton.

HAW ESTATE, two miles from Newbury, Berks.—Noble OAK, SHIPPING COPPICE, TIMBER, with Lot, Top, and Bark, standing in Mousefield Coppice, Shaw, and Upper Grange Coppice, Courage, near Newbury, Berks.

MESSRS. ALEX. DAVIS & THOMAS PALMER are honoured with instructions from Henry Richard Eyre, esq. to SELL by AUCTION, at the PELICAN HOTEL, Speenhamland, Newbury, on WEDNESDAY, APRIL 27th, 1864, at THREE o'clock in the Afternoon, in Lots, 245 noble OAK TREES, of good girth and length, and particularly adapted for Government and shipping purposes. Also Seventeen useful OAK TREES, standing in the above-named Coppices. The Auctioneers beg particularly to call the attention of Timber Merchants and Government Contractors to the above timber, being very first-rate quality, and such timber that is scarce to obtain. It is close to good roads, and within easy distance of Newbury Railway Station and the Kennett and Avon Canal. Catalogues may be had of the Auctioneers, Valuers, and Estate Agents, Market-place, Newbury, Berks; or by post on application.

WANDSWORTH, SURREY.—Valuable Freehold Building Land; land-tax redeemed.

MESSRS. NORTON, HOGGART, & TRIST have received instructions to offer for SALE, at the MART, on WEDNESDAY, MAY 18, at TWELVE, in lots, upwards of Two Acres of very valuable FREEHOLD BUILDING LAND, delightfully situate near Wandsworth-common, opposite Holy Trinity Church, about a mile from the Clapham Junction, Wandsworth and Balham Stations, on the South-Western, Victoria, and Crystal Palace Railways, and within six miles of the metropolis, having a frontage to the road, leading from Tooting to Wandsworth and Clapham, of about 630 feet, and presenting most eligible sites for the erection of villa residences.—Particulars, with plans, may be had at the Spread Eagle, Wandsworth; King's Head, Tooting; of W. LANE, Esq. solicitor, No. 4, Bedford place, Russell-square; at the Mart; and of Messrs. NORTON, HOGGART, & TRIST, 69, Old Broad-street, Royal Exchange.

SURREY.—The WALTON LODGE ESTATE, extending over about 247 acres.

MESSRS. NORTON, HOGGART, & TRIST have received instructions to offer for SALE, at the MART, on FRIDAY, MAY 20, at TWELVE, in 60 lots, the WALTON LODGE ESTATE, a very important freehold tithe-free property, Land-tax redeemed, situate within 5 minutes' walk of the Walton Station, on the South-Western Railway, and within an hour's journey of all parts of the metropolis. It will be subdivided into numerous lots, and will comprise a very comfortable, modernized residence, with gardens, pleasure-grounds, ornamented with fine old stately timber, detached offices, farm buildings, orchard, and paddock in the rear, the whole containing about 12 acres, and forming a very enjoyable occupation. The remainder of the estate will consist of lots varying from 1 to 10 acres, having important frontages to excellent roads, offering most eligible sites for the erection of first-class villa residences, for which there is a great demand in this healthy, convenient, and favour-te locality, the neighbourhood abounding in walks and drives of singular beauty and attraction. A more detailed advertisement will shortly appear.—Particulars, with Plans showing the arrangement of the lots, will be ready in due course, and may be had at the Inns in the neighbourhood; of Messrs. MURRAY, SON, & HUTCHINS, Solicitors, 11, Birchin-lane; at the Mart; and of Messrs. NORTON, HOGGART, & TRIST, 69, Old Broad-street.

HOMERTON.—Freehold, Copyhold, and Leasehold Investments.

MESSRS. NORTON, HOGGART, & TRIST have received instructions to offer for SALE, at the MART, on MONDAY, MAY 23, at TWELVE, in Lots, the following valuable PROPERTY, viz.:—Three Shops, Dwelling houses, and Premises, known as the Barracks, situate in High street, Homerton, adjoining the Plough Inn, and facing Bridge-street; stabling, sheds, and yards in the rear; four tenements in Haywood's court, and valuable building ground in the rear, having a frontage of about 60 feet to Alderman's-walk, and 240 feet to a proposed new road. The whole copyhold, but nearly equal in value to freehold, being subject only to a small fine certain; also two capital newly-built freehold and leasehold shop and convenient dwelling-houses with gardens, a freehold dwelling-house with garden and forecourt, near St. Barnabas Church, and two small leasehold tenements in Freeman street and Hockley-street. May be viewed by permission of the Tenants, and particulars, with plans, had at the Plough Inn, High-street, Homerton; of G. R. WALES, esq. Surveyor, 8, Great St. Helen's; CHARLES HORTON FULLEY, esq. Solicitor, 58, Great Winchester-street, E.C.; and High-street, Homerton; at the Mart; and of Messrs. NORTON HOGGART, & TRIST, 69, Old Broad-street, Royal Exchange, E.C.

ASCOT.—Attractive Freehold Building Site, consisting of 22½ acres, the greater part in plantations, &c. exceedingly well situate, with a commanding frontage, within five minutes' walk of the railway station, on the high road from Bracknell to Sunningbill, close to the Grand Stand on Ascot Racecourse, and within one mile from the church, in a neighbourhood proverbial for its salubrity and good society, dry gravelly soil; with immediate possession.

MESSRS. DANIEL SMITH, SON, & OAKLEY have received instructions to offer the above valuable BUILDING LAND for SALE by AUCTION, at the MART, near the Bank of England, on TUESDAY, the 24th of MAY, 1864, at TWELVE o'clock.—Particulars may be obtained of Messrs. BLAKE, TYLEE, & TYLEE, 14, Essex-street, Strand; and of Messrs. DANIEL SMITH, SON, & OAKLEY, Land Agents and Surveyors, 10, Waterloo-place, Pall-mall, S.W.

ORNAMENTAL ART FOLIAGE and GUIDE for DRAWING of every Description; containing upwards of 200 Illustrations and 264 pages of Letter-press, for Workers in Wood, Stone, and Metal. 8vo. cloth, 12s.

London: LONGMAN, GREEN, & CO. Paternoster-row.

ANNUAL CIRCULATION, 15,000.

MURRAY'S HANDBOOK ADVERTISER
(Published annually in May).
Printed for the convenience of those who are desirous of communicating information to Travellers, and inserted in MURRAY'S FOREIGN and ENGLISH HANDBOOKS issued during the season.
This medium of advertising presents unusual advantages to Insurance Offices, Steam, Railway, and other Public Companies, Landlords of Inns, Owners of Baths and Mineral Springs, Teachers, Tradesmen, and others, by enabling them to bring under the immediate notice of the great mass of Travellers, who resort to Continental Europe and other parts of the world every season, in the most direct way, the various merits of their Railways, Associations, Steamers, Hotels, Articles of Merchandise, Works of Art, and such other information as they may desire to make known; while, instead of being limited to the casual publicity of a Daily, Weekly, or Monthly Periodical, it has the additional merit of being displayed in a work of permanent interest and perpetual reference.
As only a limited space is allowed for Advertisements, preference is given to those which are more immediately addressed to Tourists.
Advertisements for insertion during the Season 1864, must be forwarded to the Publisher by the 2nd of MAY, accompanied by a remittance.
JOHN MURRAY, Albemarle-street.

CUMBERLAND'S FERRIOXIDE PAINT should be used by Builders, Engineers, Ship Painters, Contractors, and all who are interested in preserving Iron, Wood, Stone, or Canvas. For Ironwork there is nothing equal to it. Its preservative and anti-corrosive properties render it universally applicable. It possesses good body and colour (a rich dark red), and, the greatest recommendation of all, cheapness.
PRICE 20s. PER CWT.
Samples sent if required.
MANUFACTURED SOLELY BY HENRY CUMBERLAND,
CHEMICAL WORKS, MILLWALL, LONDON, E.

TO MASONS, BUILDERS, &c.—TO BE SOLD, a quantity of BLACK MARBLE in Large Blocks.—Address, W. G. Mr. Turvers, Swan Inn, Old Charlton, Kent S.E. No reasonable offer refused.

TO ARCHITECTS and BUILDERS.—PORTLAND STONE FOR SALE.—The Front of a large Public Building, recently erected, and of modern design, known as the Unity Buildings, Cannon-street, City, is now to be taken down, and can be had on very advantageous terms. A favourable opportunity to those about to erect first class public buildings.—For particulars, apply to Mr. WM. PROCTOR, Builder, No. 2, Prince of Wales-road, Kentish-town; or at the Buildings, in Cannon-street, City.

TO BE SOLD, STEAM TRAVELLING and ordinary CRANES.—For particulars, apply to J. & H. PATTESON, Contractors, Manchester.

IMPORTANT to COAL PROPRIETORS, CAPITALISTS and OTHERS. The owners of valuable MINES of COAL, lying within and under a compact freehold estate of upwards of 150 acres, situate about three miles from the important manufacturing town of Blackburn, Lancashire, are prepared to treat for the absolute SALE of the COAL, or to enter into favourable arrangements for leasing the same for a term of years. Good turnpike roads intersect the estate, and the same is within very easy distance of railway and canal.—For further particulars apply to Messrs. ROBINSON & SON, Solicitors, Blackburn.

A FREEHOLD MANSION TO BE SOLD.
The elegant Furniture may be had at a valuation. There are four reception-rooms, two being 30 feet in length; eleven best bedrooms; stabling for eight horses and coachhouses for four carriages; suitable servants' offices; extensive ornamental grounds, with greenhouses, in all 25 acres; gravelly soil; near Sunningdale Station, South-Western Railway, half a mile from Windsor Great Park, and fifty minutes from the Waterloo Station.—Apply to J. MAY, Esq. Solicitor, 67, Russell-square.

VALUABLE PREMISES.—Large, open SPACE, with an area of 1,320 square yards, TO BE LET, immediately, with or without wafer communication. There is a frontage of 150 feet to the road, situate in a main thoroughfare, and adjoining the Bank. The extension of railways and city improvements, causing such a consequent scarcity of premises, render these extremely valuable.—Apply to E. & W. STURGE, Bridge-wharf, City-road, E.C.

DEPTFORD, Kent.—To BUILDERS, ENGINEERS, SHIPWRIGHTS, SMITHS, MANUFACTURERS, and Others requiring or desiring to employ Temporary or Permanent Premises for their workmen, or to erect for individuals wishing to reside, improved Dwellings for the Working Classes.—The Corporation of Trinity House, having other purposes in view for the immediate occupation of their present establishment known as the Lower Ground Almshouses, at the Stowage, Deptford, comprising Twenty-six distinct Dwellings, hereby give notice, that they are willing to receive TENDERS for LETTING the said HOUSES on a repairing lease for 21 years, or more, as may be agreed. Each house consists of basement, ground, and chamber story; five having yards and additional offices; and the others can readily have every necessary accommodation added to them. The whole is approached from the street by a centre gateway, and is inclosed within itself as a distinct precinct. These houses are situated in the centre of the large manufacturing district on the south side of the Thames. They are also, from the closeness of the cross at the ferry, very conveniently situated in relation to the large district of the manufactories on the opposite side of the river, from Mill-wall and the Isle of Dogs to the London and Greenwich Railway. For permission to view, apply to Mr NORTHWOOD, No 1, on the Premises. The whole are to be LET by Tender, in One Lot, and MONDAY, the 30th of MAY next, is the day fixed by the Corporation for receiving the Tenders.—For further particulars apply at the Offices of Mr. RICHARD TUSTER, Architect and Surveyor, 22, Gracechurch-street, E.C. and where a plan of the property may be seen.
P. H. BERTHON, Secretary.
Trinity House, March 28, 1864.

BUILDING LAND at CHITT'S HILL, WOOD GREEN, overlooking three different counties, and fronting the high road, eight minutes walk from the station and Alexandra Park, TO BE LET for the erection of superior Villa Residences, which are a great deal in this beautiful locality. Term, 99 years. Money advanced if required.—A plan may be seen, and particulars obtained on application to S. HEWITT, Architect and Surveyor, 101, Great Russell-street, Bloomsbury, W.C.

WATERSIDE PREMISES, CITY ROAD
MESSRS. FULLER & HORSEY are instructed to LET, on Lease, from Michaelmas next, Extensive WATERSIDE PREMISES, occupying a site of 21,000 superficial feet on the Western Bank, City-road, and comprising a spacious Chemical Laboratory, Brick Manufactory of two floors, engine and boiler houses, with 9-horse power steam engine and three Cornish boilers; range of brick-built offices, and paved yards with gateway entrances. There is a water frontage of about 270 feet.—For further particulars apply to Messrs. FULLER & HORSEY, No 13, Billiter-street, London, E.C.

BUILDING LAND, TO BE LET, at low Ground Rents.—

UPPER NORWOOD	Villas	Rental..	£30
PERRY HILL, SYDENHAM	Shops	"	£50
HACKNEY (best part)	Dwelling House ..	"	£30

Money advanced if required.
Apply to Mr. T. K. GREEN,
23, COLLEGE HILL, CANNON STREET, E.C.

TO BREWERS and OTHERS.—For SALE, by PRIVATE CONTRACT, a Plot of FREEHOLD BUILDING LAND in the immediate proximity of the Reading Stations on the Great Western, South Eastern, and South-Western Railways, and abutting upon a road which will soon become one of the principal thoroughfares to these Stations. The site is admirably adapted for a good second-class Hotel. Money advanced if required.—Apply to Mr. WM. WEEDON, Solicitor, Reading.

BUILDING LAND, Reading, Berks.—FOR SALE, by PRIVATE CONTRACT, in lots suited for the erection of private Dwelling-houses, several acres of FREEHOLD BUILDING LAND, forming part of the rapidly improving Western suburb of the Town. The roads on the Estate are excellent. The property is ornamentally timbered, and commands a prior view of that well-known and picturesque Town. Plots are open and level, and every description of Building Land is available. Trees are supplied on very moderate terms, and lowest terms, by F. GIBELL, Plan and Oil-cloth Manufacturer to the Trade, 8, Paternoster-street, City-road, E.C. Patent Enamel Leaf for Churches, &c. Estimates forwarded on receipt of particulars.

Lists of prices and estimates forwarded on application at the Warehouse, 318, Oxford-street, W.

CRYSTAL WHITE SHEET GLASS.—WHOLESALE BRITISH and FOREIGN WINDOW GLASS WAREHOUSE.
British and Patent Plate, Crown, Sheet, Horticultural, Stained, Coloured, Ornamental, Ground, Fluted, Rough Plate, Photographic, and every description of Glass.
Estimates and Price-lists forwarded free on receipt of business card addressed to
R. METTAM & CO.
30 and 31, PRINCES STREET, SOHO, LONDON, W.

TO BUILDERS.—Four Acres of FREEHOLD LAND, only three miles from the City, and on a main road a few yards from the new station which the London and Bright Railway Company have engaged to construct on the line they are now building across the high road known as Queen's-road New Cross. TO BE LET, on Building Leases.—Apply to Mr. BIRKS, 11, Clifton-cottages, Clifton-road, Pomeroy-street, Old Kent-road, S.E.

TO BUILDERS and CONTRACTORS.—BRICKWORK of FOUR small HOUSES TO BE LET, by the rod.—Apply, 10, Tent-street, North-street, near Hillsend Gate.

EASTBOURNE, SUSSEX. FREEHOLD PROPERTY FOR SALE.—NOTICE to BUILDERS and BRICKMAKERS.—TO BE SOLD, by PRIVATE CONTRACT, a BUILDER'S PREMISES, in the centre of the town. Large yard, stables, &c.; large workshops, fitted with steam machinery, and new two years ago, and can be seen at work any day. The premises can be had possession of in about three months. The present proprietor is leaving the town. Also a BRICKFIELD, in full work, with a House on it. Would be sold separate or together.—For particulars, apply to WILLIAM BARKHURST, Builder, Eastbourne.

BUILDING LAND at KENNINGTON LANE, about five minutes' walk from the Elephant and Castle, for 20l. for houses which are in great demand. Ground-rent 4l. Also HOUSES and SHOPS FOR SALE, in carcase or finished.—Apply to Mr. J. SEXBY, 85, Lower Kennington-lane, S.

SANDOWN, ISLE of WIGHT.—Opening of the Railway.—BUILDING LAND, opposite the proposed Pier, and in full view of the magnificent Bay, on leases for 1,000 years.—Apply to Mr. WITHERS, Timber Merchant, Sandown.

SEAFORD, near NEWHAVEN, SUSSEX. To Builders and Others.—Eligible PLOTS for BUILDING, with full sea view, and comprising every advantage, TO BE LET on Building Leases for 99 years. The railroad is to open in less than a month, and it runs directly into the centre of this beautiful and sheltered watering place. For plans and particulars, apply to Messrs. WM. G. HABERSHON & PITE, Architects, 38, Bloomsbury-square, London, W.C.—Mr. OCKENDEN, Bailiff of Seaford, will show the ground.

TO CARPENTERS, BUILDERS, UNDERTAKERS, and OTHERS.—GUILDFORD, SURREY.—TO BE LET, with immediate possession, a genuine, good, old-established CARPENTER'S and BUILDER'S BUSINESS, doing a good respectable trade, and very convenient premises, with every facility for extending the business. The present owner's health is the sole reason for relinquishing the business. For particulars, inquire of Mr. DRURY, Auctioneer, &c. Guildford.

PATENT and BRITISH PLATE GLASS.
JAMES HETLEY & CO. beg to inform Architects, Builders, and the Trade generally, that their new Tariff of Prices for the above will be sent on application; they will also, on receipt of particulars, forward Estimates for any description of Glass now manufactured.—Patent Plate, Sheet, Crown, and Ornamental Window Glass Warehouse, 3, Soho-square, London.

EBOR STAINED-GLASS WORKS.—J. W. KNOWLES, 73, Goodramgate, York, begs to inform the clergy, gentry, architects, that he can execute GROUP or FIGURE WINDOWS, in the first style of art, and at the lowest scale of prices. Geometrical windows from 8s. per foot; Quarries from 3s. per foot. Designs and estimates on application.

BURHAM BRICK, LIME, and CEMENT COMPANY, BURHAM WHARF, BELVIDERE-ROAD, LAMBETH.—The public are informed that the Company have taken the above Premises, and have ON SALE, GAULT BRICKS, TILES POTTERY, DRAIN PIPES, GREY STONE LIME, PORTLAND and other CEMENTS, and BUILDING MATERIALS of all description. Architects and Builders are respectfully informed that goods of any pattern or design can be manufactured at the Company's Works, erected on the banks of the Medway by the late Thomas Cubitt. They would also call the attention of the public to the very superior quality of their Portland Cement.

HYDRAULIC LIME and ROMAN CEMENT, manufactured by LLOYD JONES & CO. Halkin Works, Holywell, Flintshire. The Halkin Hydraulic Lime is the same kind as the cement used in the construction of the Liverpool Docks, Manchester, and various waterworks, collieries, and mines throughout the country, being so highly celebrated for its strong cementitious and cementing powers for masonry in water. Can be supplied by rail or water to any part of the kingdom, either in lump (loose), or ground, and in barrels and bags. The limestone can be had in full cargoes, also their cement in barrels, which is of a very superior quality and warranted pure. Orders to be accompanied by a banker's reference. Apply at the Works; or to E. & W. AARON, Agents, 66, South Johnstreet, Liverpool.

ROMAN, PORTLAND, PARIAN, and KEENE'S CEMENTS.

SOUTH EASTERN RAILWAY.
HALL'S MERSTHAM GREY STONE LIME WORKS.
WILLIAM PETERS
has taken possession of the above Works from the 25th March inst. and solicits a continuance of that support which has been so liberally given to his predecessors. Orders addressed to
WILLIAM PETERS,
MERSTHAM GREY STONE LIME WORKS, near REDHILL, SURREY, and
No. 199, OLD KENT-ROAD, S. (Bricklayers' Arms Station), will receive immediate attention.

HALL, BROTHERS,
LATE OF
MERSTHAM GREY STONE LIME WORKS,
Resigned the above works on the 25th of March, at the expiration of their Lease, in consequence of being unable to effect such terms for a renewal as they could accept. The works used by them for nearly forty years, during which time a considerable business has been established; and now to give them up so unexpectedly, with only a few weeks' notice, without any remuneration for the trade, has caused to them great loss and disappointment.
Anxious that their customers should not be inconvenienced by the sudden change, HALL, BROTHERS, have arranged for them to be supplied in LONDON, and by Railways from these Works, upon the terms then existing, until the 24th JUNE, by Mr. W. PETERS.
They wish to remind their customers and the public that their business in Grey-stone and Chalk Lime, Cement, Slates, Sand, Coal, &c., is carried on as usual at Croydon, Coulsdon, Redhill, and Reigate; and, should they be successful in obtaining premises for the manufacture of Grey-stone Lime, they will resume their trade in London and on the Railways, and hope for a continuance of that support they have hitherto so generously afforded them.—Address,
HALL, BROTHERS, CROYDON, OR REDHILL, SURREY.

BORSTAL PORTLAND CEMENT WORKS,

OCTAVIUS N. SIMPSON, STAMFORD;
and see Specimens at the Office of
Messrs. PINDER SIMPSON & SONS, 29, Savile-row, London, and at the Museum of Practical Geology, Jermyn-street, W.
This stone (which is a perfect oolite) is raised in blocks of any required size, and is admirably adapted for block in course. It will stand ANY WEATHER, is unaffected by water works, and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed-wise. It works freely with a tooth-saw, and wrought at a cheaper rate than any stone in the Kingdom.
*** The above WEATHER STONE is in 9l. per cubic foot, delivered in London.

ROOFING SLATES,

FIRE BRICK and CEMENT WORKS,
WOODEN BOX, near BURTON ON TRENT.
Established 1825.
JOHN KNOWLES,
HAWLEY NEW WHARF,
HAMPSTEAD ROAD, CAMDEN TOWN, N.W.
Fire Brick, Tiles, and Clays of all sizes, made to order on short notice.
Crucible and Cement Clay Wholesale and for Exportation.
EVERY ARTICLE MANUFACTURED AT THE ABOVE WORKS.
N.B. These goods are supplied to the largest Steel, Smelting, Armour Plate, and Crucible Works in the World, to which references can be given on application.

TO BRICKMAKERS.—All Parties who BURN BRICKS in CLAMPS are invited to inspect the NEW MODE of SETTING, patented by Mr ROBERT WHITE, and which may be seen in operation at the Brickfields of
J. B. WHITE & BROTHERS, Erith, Kent.
The advantages of this plan are two-fold.
1st. Nearly all the bricks are burnt into stocks, and the yield of inferior bricks is reduced from 35 to about 10 per cent of the total make, which in itself represents a large permanent saving.
2nd. The bricks are so much improved in colour and soundness as to give them a considerable additional value in the market over common stocks.
Licenses for use of the Patent granted to Brickmakers, on application to the Patentees, 17, Millbank-street, Westminster

BRICKS, PANTILES, AND PAVINGS.
J. H. ANDREWS, Wisbech, offers

BRICKS!—To BUILDERS and OTHERS.
Best and Second White Facing BRICKS delivered at once at the King's Cross Station (Great Northern Railway) at 42s. and 44s. per thousand. Cash on delivery.—Apply to Mr HUKINS, 21, Archer-street, Bayswater, W.

TO CONSUMERS of BRICKS.—A remarkable Deposit of the finest BRICK CLAY, immediately adjoining a railway shipment, has lately been brought under the notice of the metropolitan building trade. This Clay, which is of fine colour, has the unusual quality of entire freedom from stones, chalk, or other foreign matter that can interfere with its manufacture, and is also of suitable consistency to enable it to be passed from the clay bed through the machines without the usual expensive process of Wet Pan Grinding, and is quite capable of being raised, its adhesive properties are so great that Bricks and Flooring Tiles made from this Clay can be thrown about or unloaded from carts by tipping with no fear of breakage. There are every convenience for making these Bricks on a large scale, there being an abundance of suitable land for works and floors, with coal by sea or train at a low rate. There are also unusual facilities for loading vessels in one of the finest harbours on the coast, with extents of space. The prices at which these Bricks and Tiles can be delivered are from ten to twenty-five per cent. under the lowest London prices. A Company is now about to be formed to make 100,000,000 of these Bricks.—Samples of Clay also of the Bricks and Tiles made from it, can be seen at the Offices of JOSIAH FOSTER FAIRBANK, C.E. 22, Parliament-street, Westminster, S.W.
19th April, 1864.

TERRA COTTA and Fine STONEWARE
POTTERY, warranted to stand Frost.
JOHN M. BLASHFIELD, STAMFORD POTTERY, STAMFORD, LINCOLNSHIRE, has greatly improved and economized the manufacture of TERRA COTTA and Fine STONEWARE for ARCHITECTURAL PURPOSES. He is able to make it of various new colours, so as to harmonize with Marble, Portland, and other Stones, and equal in hardness to Granite.
A Medal at the International Exhibition was awarded, in Class 10, Section C, Architectural Objects, for "Perfection in manufacture and beauty of form." A Medal was also awarded for "Terra Cotta."
Moulded Bricks, String Courses, Cornices, Cills, Tracery, Balusters, Capitals, Crosses, Finials, Vases, Statues, Brackets, Consoles, Garden Edging, Gutterings, Strings, and Diapers, inch Paving Tiles, &c. &c.
Also Plain and Mosaic Pavements for Halls, Churches, Conservatories, &c. in all colours.
London Office, 377, Oxford-street, W.

PRIZE MEDAL TO MAW & CO. INTERNATIONAL EXHIBITION, 1862.
IMPERISHABLE TESSELATED PAVEMENTS, combining a highly decorative and economical substitute for ordinary floors of their perishable coverings. MAW & CO.'S Pattern-book, designed by M. Digby Wyatt, esq. together with a specimen, can be sent and adapted to any given dimensions of hall, passage, conservatory, verandah, frieze, &c. will be sent on application to Benthall Works, Broseley, Salop.
May be seen at Exhibition of Building Inventions, &c. now open at the Galleries of the Architectural Exhibition, 9, Conduit-street, free.
London Agents—W. B. SIMPSON & SONS, 456, West Strand, who have on view a great variety of Specimens of the Pavements.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No 21 Wharf, Macclesfield street, City-road, Finsbury, N. And, lastly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and lastly, that the "Reports of the Jurors," page 881, of the Great Exhibition, 1851, note the grant of a First-class Medal and rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

TWO PRIZE MEDALS AT THE INTERNATIONAL EXHIBITION,
MAGNUS'S ENAMELLED SLATE obtained the Medal of the Society of Arts; the Prize Medal at the Great Exhibition, 1851; Two First-class Medals at the Paris Exhibition; and Two Prize Medals at the International Exhibition of 1862.
The many imitations of this beautiful material are being painted upon the public. Architects are therefore requested to see that the name of "MAGNUS" is upon each article.
Chimney-pieces, Billiard-tables, Table-tops, Baths, Wall-linings, &c. a New Illustrated Catalogue of which can be had at the Pimlico Slate Works, 33 and 143, U, per Belgrave-place, Pimlico, S.W.

TO RAILWAY COMPANIES and ENGINEERS.—OFFERED FOR SALE, for England and its Colonies, a PATENT for the Construction of an entirely New Principle of Underground Telegraphs.—Apply to C. O. at Messrs. E. Marlborough's, Ave Maria-lane, London.

JAMES STIFF & SONS,

MANUFACTURERS OF GLAZED STONEWARE DRAIN-PIPES, WATER-CLOSET PANS, SINK-TRAPS, INVERT BLOCKS, AND ALL OTHER ARTICLES SUITABLE FOR DRAINAGE PURPOSES; ALSO

HALF-SOCKET PIPES same prices as the Whole Sockets, by the use of which Drains may be readily examined, and Junctions inserted, in the event of requiring further connections.

Manufacturers also of

LOVEGROVE'S PATENT DOUBLE AND TRIPLE JUNCTIONS AND INSPECTION SHAFTS for small Sewers and Drains, by the use of which the Sewers and Drains may be examined and cleansed without disturbing the surface of the ground; adapted also for ventilation of Sewers and Drains.

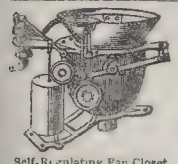
DRAWINGS, WITH PRICES, WILL BE FORWARDED FREE ON APPLICATION.

INTERNATIONAL EXHIBITION, 1862. CLASS 10, No. 2268.

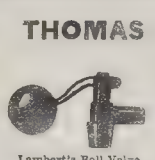
The only MEDAL for "STONEWARE PIPES" has been awarded to

HENRY DOULTON & CO., LAMBETH.

Extract from Jurors' Report:—

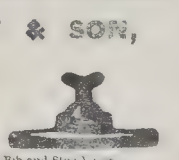


"H. Doulton & Co.—Stoneware Pipes, &c. excellence of manufacture and lowness of price."



GLAZED STONEWARE DRAIN PIPES, TERRA-COTTA CHIMNEY TOPS, &c. &c.

Supplied on the lowest terms, direct from



H. D. & CO.'S MANUFACTORIES, HIGH-STREET, LAMBETH, LONDON; ROWLEY REGIS, STAFFORDSHIRE; and SMETHWICK, near BIRMINGHAM.

THOMAS LAMBERT & SON,

Self-Regulating Pan Closet. Lambert's Ball Valve. High-Pressure Bib and Stop Valve.

PATENTEES and MANUFACTURERS, SHORT STREET, NEW CUT, LAMBETH.

T. L. & SON find it necessary to state that their manufactures have their NAME legibly marked thereon.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.

ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Baryta from ten to thirty per cent. Whether sold under the name of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such trash. Workmen who have once used the Patent Zinc Paint will never willingly take any other Paint for their best work.

CHEAPNESS. Not only is it cheaper per bushel weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,

WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

CONTRACTORS FOR ROOFING THE GREAT EXHIBITION BUILDING OF 1862.

By Her Majesty's  Royal Letters Patent.

F. McNEILL & CO. of LAMB'S BUILDINGS, BUNHILL ROW, LONDON,

Manufacturers and ONLY Patentees of

THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.

Patronised by

HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSIONER OF CUSTOMS,
HONOURABLE EAST INDIA COMPANY,
HER MAJESTY'S WAR DEPARTMENT,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK.

And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland, at which great national shows it has been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for temporary purposes at the Royal Agricultural Society's House in Hanover-square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a non-conductor of heat and sound. The Felt can be cut to any length, by 33 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its uses, and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen, who have extensively used it, sent free to any part of the town or country. DRY HAIR FELT, for covering Boilers, &c. is also manufactured, by which a saving of about 25 per cent. in fuel is effected. The TRADE are respectfully enjoined to send their orders DIRECT to the FACTORY, as the surest means of being supplied with a good article, and in lengths best suited to their roofs. The original works where the above roofing is made are F. McNEILL & CO.'S Manufactory, LAMB'S BUILDINGS, BUNHILL ROW, E.C. Roofs covered with McNEILL'S FELT to be seen at the CAMPS of ALDERSHOT, CURRAGH, SHORNCLIFFE, and FOLKESTONE, upwards of Three Millions of Feet; also the GREAT EXHIBITION BUILDING of 1862, of nearly One Million Feet. A Liberal Discount allowed to the Trade.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required. 4th. It can be easily applied by any unpracked person.—5th. From its lightness, weighing only about 42 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor.

INODOROUS FELT, for damp-proofing floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.

CROGGON and CO.'S PATENT FELTED SILLATHING, for Covering Ships' Bottoms, &c. and

DRY HAIR FELT, for Covering steam Boilers, Pipes, &c. preventing the radiation of Heat, saving 25 per cent. of Fuel, and deadening Sound.

DENTS TURRET CLOCKS.—The attention of Public Bodies, Gentlemen, and others, is respectfully requested to the Improvements made in the Construction of CLOCKS, suitable for STABLES, CHURCHES, and other large Buildings, by the late E. J. DENT and F. DENT, Clock and Chronometer Makers to the Queen and Prince Consort, and Makers of the GREAT CLOCK for the HOUSES of PARLIAMENT, &c. Turret Clocks, with Compensation Pendulum, adjusted for variations of temperature, to work the hands of dials of any size, from 1 foot to 20 feet diameter.

E. DENT & CO. 61, STRAND (adjoining Coutts's Bank); and 34 and 35, ROYAL EXCHANGE, LONDON.

GUTTA-PERCHA MILL-BANDS.—The Gutta-Percha Company beg to state that the increasing demand for the Gutta-Percha Strapping for Driving-bands, Lathestraps, &c. fully justifies the strong recommendations they have everywhere received. Their durability and strength, permanent contractability and uniformity of substance; their non-susceptibility of injury from contact with oils, grease, acids, alkalies, or water; and the facility with which the straps are repaired can be made in bands of from 2 to 24 feet long, render them superior to leather for almost all working purposes, and decidedly more economical. Every variety of Gutta-Percha Articles, such as Tubing, Soles, Pump-buckets, Fire-buckets, Bosses, Chess-pieces, Flasks, Bottles, Bowls, Toilet-trays, Curtain-rings, Galvanic Batteries, Tailpotype Trays, &c. &c. manufactured only by the Gutta-Percha Company, and sold by their Wholesale Dealers in town and country.

THE GUTTA-PERCHA COMPANY, PATENTEES,

SALES BY AUCTION.

EXTENSIVE SALE of BUILDING MATERIALS, LEADENHALL STREET and ST. MARY AXE, facing the new buildings of the East India House Estate Company.

MESSRS. PULLEN, HORNE, & EVERSFIELD are instructed to SELL by AUCTION, on the PREMISES, on TUESDAY, MAY 10th, at TWELVE, in Lots, the whole of the valuable BUILDING MATERIALS and FITTINGS UP of the extensive block of Houses at the corner of Leadenhall street and St. Mary Axe, being Nos 117 and 118, Leadenhall street, and Nos 54, 55, 66 67, and 68, St. Mary Axe. Further particulars in a few days, when Catalogues may be had of C. J. CORBETT, Esq. and THOMAS NEWSON, Esq., Architects, 17, Gracechurch street; and of PULLEN, HORNE, & EVERSFIELD, 80, Fore-street, E.C. and 40, Parliament-street, S.W.

CLAPTON.—Important Sale of BUILDING MATERIALS of Two Mansions, GROWING TIMBER, &c. on the Clapton Hall and Priory Estate.

MESSRS. PULLEN, HORNE, & EVERSFIELD are instructed by the London and Suburban Freehold Land Society, to SELL by AUCTION, on the PREMISES, on THURSDAY, MAY 19th, and following days, at TWELVE o'clock, in Lots, the whole of the capital MATERIALS and FIXTURES of the spacious Mansions distinguished as Clapton Hall and The Priory, Lower Clapton; comprising 250,000 capital bricks, 20 squares of slates, prime oak and fir timber in roofs and floors, 20 pairs plate-glass sashes and French casements, 30 pairs other sashes and shutters, capital moulded doors, handsome mahogany cabinet doors with silvered plate-glass panels, 60 panelled doors, various; 120 squares of sound floor-boards, 8 squares of oak management floor, fine statuary marble and other chimney-pieces, the handsome stone front with lofty domes, 50 squares of stone paving, 300 feet run of Portland plinth, stone staircase, stone landings, steps and rails, 5,000 feet run of iron railing and fencing, coachhouse gates, racks, mangers, and stable-fittings; several tons of lead in flats, gutters, cisterns, and pipes, register and other stoves, ranges, force-pump, copper bath, brewing copper, closets, blinds, and a great variety of useful fixtures and fittings up. Also a portion of the valuable TIMBER standing on the Estate. May be viewed by the previous Catalogues had of Messrs. HAMMACK & LAMBERT, Architects, 39, Bishopsgate-street; at the Offices of the London and Suburban Freehold Land Society, 70, Fenchurch-street; and of PULLEN, HORNE, & EVERSFIELD, 80, Fore-street, E.C. and 40, Parliament-street, S.W.

BROMLEY, KENT.—Second Sale.—Charming BUILDING SITES for Gentlemen's Residences, immediately adjoining the Shortlands station, on the Mid-Kent Railway, near the important junction at Beckenham, and consequently within very easy reach of nearly all the London termini.

MESSRS. DEBENHAM & TEWSON are instructed to SELL, at the MART, on TUESDAY, MAY 3rd, in lots of from 3 acres to 6 acres each, a portion of the remainder of the very valuable FREEHOLD BUILDING ESTATE, known as Shortlands, affording a few of the most agreeable sites to be met with near London. Excellent roads have been made, and nearly all these lots have large frontages thereto, and are within two or three minutes' walk of the station. Plans, with particulars, may be had of Messrs. BIRCHELL, Solicitors, 5, Broad Sanctuary, Westminster; of JOHN WHICHCORD, Esq., Architect, No. 16, Walbrook; of ROBERT RITCHIE, Esq. Architect, 7, Beaufort Buildings, Strand; and of the Auctioneers, No. 80, Cheapside, who will in the meantime be prepared to treat by private contract

IMPORTANT NORTH STAFFORDSHIRE ESTATE, KENT.—A Registered and Indefeasible Title to every Lot.

MESSRS. DEBENHAM & TEWSON beg to inform the public that the OPTION of having a REGISTERED TITLE under the Act of 1862, will be FREELY GIVEN to the Purchasers of Lots on this Estate, steps having already been taken by the Vendor to obtain this advantage. The effect of a Registered Title will be to reduce the present and all future Purchase-deeds to a mere nullity at almost nominal amount. This is the first estate which has been brought into the market for sale with a REGISTERED and INDEFEASIBLE TITLE under the New Act, and the immense advantages thereof to all purchasers, and especially those intending to deal with it, building on the land, can hardly be over estimated as not only will the title be absolutely indisputable, but all sales of the whole or any portion, or of houses to be built thereon, will be as simple and inexpensive as the transfer of a ship, or money in the Funds. This advantage, in addition to the attractive character of the estate itself, and the fact of the locality being one of the most favourite near London, cannot fail to render any building operation on an extensive scale a tolerably successful speculation. Particulars as above.

On the Border of the City of London.—Valuable Freehold Property, covering a large extent of ground, close to the Metropolitan Station and Farringdon-street.

MESSRS. DEBENHAM & TEWSON will SELL, at the MART, on TUESDAY, MAY 10, at TWELVE, an important FREEHOLD PROPERTY, comprising an Old-fashioned Dwelling-house, with Back-land, Close, and 2, 3, 4, 5, and 6, Bay Plans, with the extensive Yards in front of the same, the whole covering an area of nearly 8,000 feet, with frontages to Glasshouse and Bell-yards, and Aldersgate-street, affording a fine site for extensive manufacturing or warehouse premises. The property is at present occupied by four tenants, at rentals amounting to about 212l. per annum, but is underlet at much larger rentals, estimated to produce considerably more as a ground-rent.—Particulars and Plans of Messrs. G & R. H. BRANDON, Solicitors, 15, Essex-street, Strand; and of the Auctioneers, Chapside.

FULHAM.—Speculative Property, fronting the main road, covering about half an acre, nearly Freehold, offered as a good site for a Public Building or number of Detached Houses

MESSRS. DEBENHAM & TEWSON will SELL, at the MART, on TUESDAY, MAY 17, at TWELVE, in one Lot, by order of the Trustees of the late Mr. William White, with consent of the mortgagee, a well-situate and for the most part FREEHOLD PROPERTY, comprising seven houses, with large gardens in the rear known as Nos. 1 to 7, White's cottages, on the east side of Bridge-street, Fulham, close to the line of improvements lately made by the New Bridge and Pier Company, occupying an area of about half an acre, and having a frontage of 160 feet, to which main road all let to weekly and yearly tenants at rentals amounting to 144l. 8s. per annum. The cottages are copyhold, at a small fixed fine, and equal to Freehold.—Particulars of Messrs. DAWSON & BRYAN, Solicitors, 33, Bedford-square; and of the Auctioneers, 80, Cheapside.

WIMBLEDON.—The beautiful ESTATE formerly attached to the residence of LORD LYTTELTON (now removed), supplying the finest Unbroken Timbered park Grounds and Gardens, situate on the south-west slope of a considerable hill, enjoying uninterrupted views of some of the finest scenery in the county of Surrey, and affording at almost the smallest opportunity for a great small walking to build, and to combine the advantages of a modern mansion with an unusually large amount of the most delightful rural attractions near London, and for the like reasons especially eligible for a large institution, or for sub-division and the erection of first-class villas.

MESSRS. DEBENHAM & TEWSON are instructed to SELL, at the MART, early in the Spring, in Lots, (unless an acceptable offer be previously made for the whole), the very valuable and most beautiful FREEHOLD ESTATE, known as Cottenham park, comprising nearly 40 acres of magnificently timbered Grass Land, having the important advantage of a dry gravelly subsoil, an abundance of water, extensive frontages to good roads, contiguity to a church nearly accessibility from London by rail shortly to be extended to Cannon street) and situation and scenery that likely obtain for the property the title of the gem of the neighbourhood.—Particulars in due course of Messrs. FRESHFIELDS & NEWMAN, Solicitors, No. 5, Bank-buildings; and of the Auctioneers, 80, Cheapside, who are fully authorized to treat for the Sale, in one Lot, by private contract.

Early Sale, on account of the number of lots.—To Timber Merchants, Builders, Carpenters, Lucifer Makers, and Others.

MESSRS. LEREW & LEREW will SELL by AUCTION, on the PREMISES, Maiden-terrace, Camden-town, on MONDAY, MAY 9th, at ELEVEN for TWELVE, 2,000 yellow, white, and pine planks, deals, and battens, 7 to 20 feet of wide and narrow, 250 squares of prepared flooring, 12,000 feet of quartering, 700 feet of mahogany and oak, 6,000 4 feet laths, dry cut stuff, staving, battens, scaffold poles, ladders, barrows, chimney pieces, loose materials, &c.—Auction Offices, Carlington-street, Hampstead-road, N.W.

LANCASHIRE.—OSWALDTWISLE, near BLACKBURN.—SALE of Valuable and Extensive FREEHOLD ESTATES.—TO BE SOLD by AUCTION, by

MR. GRUNDY, on THURSDAY, the 28th day of APRIL, 1864, at the BULL HOTEL, in Blackburn, in the County Palatine of Lancaster, at FOUR o'clock in the afternoon, subject to the conditions to be then and there produced by the Vendors, and to be read following, or such other lot or lots as may be agreed upon at the time of sale:—

Lot 1.—All that Close, Piece, or Parcel of MEADOW LAND (part of the Salt-pit Farm), situate at Smithy Brook, within the Township of Oswaldtwisle, in the Parish of Whalley and County Palatine of Lancaster, bounded on or towards the south by the public highway, and on or towards the west by the stream or brook called Smithy Brook, and containing in statute measure 2a. 1r. 34p. or thereabouts, and fully delineated and described in the plan thereof (No. 1) hereinafter referred to.

Lot 2.—All that Farm and Tenement known by the name of the Falls Farm, situate in the Township of Oswaldtwisle aforesaid, on the east side of and bordering on the west by the highway leading from Blackburn to Little Moor end, on the north east by the Lower Stanhill Farm, and on the east by the stream or brook known as Smithy Brook; consisting of the farmhouse, farm, and other buildings, and the several closes, pieces, or parcels of meadow and pasture land, fully delineated and described in the plan thereof (No. 2) hereinafter referred to, and containing together in statute measure 12a. 1r. 2p.

Lot 3.—All that Farm and Tenement known by the name of The Upper Stanhill Farm, situate in the township of Oswaldtwisle aforesaid, on the north east side of the highway leading from Blackburn to Little Moor End, and on the east by the Fountains Farm, on the south by Whitcash Mills, and on the north west by a way or road leading from said highway to Antgreave; consisting of the farm-house, farm, and other buildings, and the several closes, pieces, or parcels of meadow and pasture land, fully delineated and described in the plan thereof hereinafter referred to, and containing together 31a. 0r. 2p. in statute measure.

Lot 4.—All that Farm and Tenement known by the name of The Fountains Farm, situate in the township of Oswaldtwisle aforesaid, bounded on or towards the north by Antgreave, on the east by a private road on the west and south by Lower Stanhill Farm and part of Whitcash Mills, and on the north eastern extremity by the turnpike road (separating at that point a small portion of this lot) leading from Blackburn to Accrington, and consisting of the farmhouse, farm, and other buildings, and the several closes, pieces or parcels of meadow and pasture land, fully delineated and described in the plan thereof (No. 4) hereinafter referred to, and containing together in statute measure 29a. 2r. 25p.

Lot 5.—All that Farm and Tenement (formerly part of the Stanhill Farm) situate in the township of Oswaldtwisle aforesaid, on the north east side of and bordering on the south-west side by the turnpike-road leading from Blackburn to Accrington; consisting of the several closes, pieces, or parcels of land, fully delineated and described in the plan thereof (No 5) hereinafter referred to, and containing together in statute measure 25a. 3r. 13p.

Lot 6.—All that Farm and Tenement known by the name of the Stanhill Farm, with the substantial and well-accustomed Inn or Public House (known as the Spread Eagle), with the farm and other buildings thereon, situate in the township of Oswaldtwisle aforesaid, on the south side of and bounded on the north by the turnpike-road leading from Blackburn to Accrington, and on the west by the private road or way from Stanhill House to the said turnpike; and consisting of the several closes, pieces, or parcels of land, and pasture land, in or upon those aforesaid, and fully delineated and described in the plan thereof (No. 6) hereinafter referred to, and containing together in statute measure 25a. 0r. 3p.

Lot 7.—All that Farm and Tenement known by the name of the Higher Stanhill Farm, situate in the township of Oswaldtwisle aforesaid on the south side of the turnpike-road leading from Blackburn to Accrington, bounded partly on the north by the said turnpike-road leading from Blackburn, on the south by the highway leading from Blackburn to Little Moor End, on the east by Stanhill House and Stanhill Farm, and consisting of the farmhouse, farm and other buildings, and the several closes, pieces, or parcels of meadow and pasture land fully delineated and described in the plan thereof (No. 7) hereinafter referred to, and containing together in statute measure 30a. 2r. 8p.

Lot 8.—All those Two Messuages or Dwelling-houses, and all that plot or parcel of Land or Ground (known as Rock Meadow), situate at Stanhill, within the township of Oswaldtwisle aforesaid, on the north side of the highway from Blackburn to Little Moor End, containing in the whole, 3a. 2r. 9p. or thereabouts, and fully delineated and described in the plan thereof (No. 8), hereinafter referred to.

Lot 9.—All that Farm and Tenement known by the name of the Salt Pit Farm, situate in the township of Oswaldtwisle aforesaid, on the west side of the highway leading from Blackburn to Little Moor End, bounded on or towards the east by the said highway, and on or towards the west by the Rushes Farm, and on or towards the south-west by property of John Reddish, esq. and others; and consisting of the farmhouse, farm, and other buildings and the several closes, pieces, or parcels of meadow and pasture land, fully delineated and described in the plan thereof (No. 9), hereinafter referred to, and containing together 16a. 1r. 19p.

Lot 10.—All that Farm and Tenement known by the name of the Rushes Farm, situate in the township of Oswaldtwisle aforesaid, on the south west side of the highway leading from Blackburn to Little Moor End, bounded on or towards the north-east by the said highway, on or towards the south east by Salt Pit Farm, on or towards the north west by part of the Rushes Farm, and on the south by Smithy Brook, all property of John Reddish, esq. and others, and consisting of the farm house, farm, and other buildings, and the several closes, pieces, or parcels of meadow and pasture land, fully delineated and described in the plan thereof (No. 10) hereinafter referred to, and containing together, in statute measure, 27a. 1r. 3p.

Lot 11.—All that Farm and Tenement known as part of the Higher Stanhill Farm, situate in the township of Oswaldtwisle aforesaid, on the south side of the highway leading from Blackburn to Little Moor End, bounded on or towards the north by the said highway, on or towards the south-east by the Rushes Farm, and on or towards the south west by land of John Reddish, esq. and others, and consisting of the Farm House, Farm, and other Buildings, and the several Closes, Pieces, or Parcels of Meadow and Pasture Land, fully delineated and described in the plan thereof (No. 11) hereinafter referred to, and containing together in statute measure 34a. 3r. 0p.

Lot 12.—All those several Closes, Pieces, or Parcels of Meadow and Pasture Land, situate lying and being on the north side of Oswaldtwisle aforesaid, known by the several names and containing (in statute measure) the several quantities following: that is to say, the Old Meadow (including the site of Grave House, Shrubbery, Plantation, Gardens, Coachhouse, Stable, Shippons, Cottages, Outbuildings and Premises hereinafter mentioned, as forming part of this lot), 3a. 3r. 38p.; the Croft, 1a. 0r. 19p.; and the Chapel Meadow, 1a. 3r. 19p.

Also, all that modern capital Family Residence erected on part of the before-mentioned land, with the Shrubberies, Plantations, Gardens, Coachhouse, Stable, Shippons, Cottages, and Outbuildings connected with Grove House and Premises aforesaid

Grove House is a very excellent family residence, contains spacious and well proportioned dining room, drawing-room, breakfast-room, and library; numerous good and suitable bed-rooms, bath-room, water-closet, &c.; kitchens, cellarage, entrance hall, and convenient staircases. The several rooms have been carefully fitted up with and now contain expensive and modern fixtures; the whole premises are well supplied with hard and soft water, and are replete with every convenience and appendage usually to be found in extensive family residences.

The whole of the before-mentioned farms and properties are freehold of inheritance, and will be Sold subject to the reservation of the coal within and under the said farms and properties.

The tenants of the several Farms and Properties have instructions to show their respective holdings, and printed particulars, with lithographic plans of each lot may be had on application to Messrs WESTALL BROTHERS, Whalley Mills, Oswaldtwisle; also on application to the Auctioneer, at his Office, No. 86, King-street, Manchester, or on application at the Offices of Messrs. ROBINSON & SON, Solicitors, Blackburn; or Mr GEO. M'CALL, Land and Engineering Surveyor, Blackburn.

To be viewed the day previous and morning of sale, when catalogues may be had on the Premises; at the principal hotels in Bristol and Bath; of F. MAYNARD, Esq. Liquidator, 19, Broad street, Cheapside; of Messrs. N. LINDO & SONS, Solicitors, 47a, Moorgate-street, E.C.; and of Messrs. FULLER & HORSEY, 13, Billiter-street, London, E.C.

PORT of WEYMOUTH.—Eligible Ship-Building Premises, together with the Plant, Steam Engines, and Apparatus.—TO BE SOLD by AUCTION, by

MR. MILLEDGE, at his General Sale Rooms, 74, St. Thomas Street, on TUESDAY, the 26th of APRIL, 1864, at THREE o'clock in the afternoon, subject to such conditions as will be then and there produced, unless previously disposed of by private contract, of which due notice will be given, all that well erected and conveniently situated FREEHOLD PIECE of LAND, used as a Ship-Way, capable of building up vessels of 400 tons, together with the Smiths' Shop, Engine House, and other Buildings, erected on part of the same. Also, all that Leasehold Shipwright's Yard, with Ship-way, Boat House Workshops, Block Makers' ditto, Office, Store, Saw-pit, Spacious Yard, and the convenient premises necessary for carrying on the ship-Building business on a large scale. The Leasehold Estate is held for a term of 63 years, of which 53 years are unexpired, and subject to an annual ground rent of 17l. 10s. The Patent Slip, with steam apparatus, belonging to the Ship-way, with or without the Stock in-Trade, may be taken at a valuation by the purchaser of the premises. Further particulars may be obtained of Mr. THOMAS COOMBS, Solicitor, Dorchester; of Mr. ROBERTS, Ship Broker, Weymouth; or the Auctioneer.

After which will be SOLD a NEW VESSEL, Schooner rigged, A-1 eight years, burthen 100 tons, but yet named, length aloft 75 feet, breadth 18 feet 6 inches, depth 7 feet 6 inches.

PIMLICO IMPROVEMENTS BUILDING MATERIALS of Fifteen Dwelling-houses.

MR. GEO. HAINES announces FOR SALE, on TUESDAY, APRIL 26, at TWELVE o'clock, the useful MATERIALS of the whole of Ranelagh-place, comprising a large quantity of sound brickwork, lead and iron, slate and tiled roofs, timber in rafters, plates, partitions, wainscots, doors, sashes, floors, joists, staircases, cupboards, chimney pieces, fixtures, and numerous fittings.—May be viewed. Catalogues of Messrs. HAINES & SON, Moorgate-street, City; and at the Auctioneer's Offices, Grosvenor-street West, Eaton-square, and No. 12, High-street, Kensington.

PIMLICO IMPROVEMENTS.—To Builders, Dealers in Materials, and Others.

MR. GEO. HAINES is instructed to SELL by AUCTION, on the PREMISES, on WEDNESDAY and THURSDAY, MAY 4th and 5th, at TWELVE o'clock, all the very excellent MATERIALS of FOURTEEN DWELLING-HOUSES and back Buildings, situate No. 23 to 36, Ranelagh-street; comprising half a million of sound bricks, lead and iron, slate and tiled roofs, useful timber, in rafters, plates, partitions, wainscots, doors, glazed sashes, floors and joists, staircases, presses, chimney-pieces, fixtures and fittings May be viewed.—Catalogues of Messrs. HAINES & SON, Moorgate-street, City; and at the Auctioneer's Offices, Grosvenor-street West, Eaton-square; and No. 12, High-street, Kensington.

REPOSITORY, BARBICAN.—CONTRACT CART HORSES.

MR. J. GOWER will SELL by AUCTION, on FRIDAY, APRIL 29, by direction of Messrs. Brassey, TWELVE powerful, active CART HORSES that have been working on the Mid-level Sewer, nearly completed. On view two days prior.

PRELIMINARY ANNOUNCEMENT.—Important City Freehold, comprising the Spread Eagle Hotel, Gracechurch-street, with extensive Premises and Yards, adapted for rebuilding.

CHINNOCK, GALSWORTHY, & CHINNOCK are instructed to SELL by AUCTION, at the MART, near the Bank of England, in the month of JUNE (unless previously disposed of by private contract), valuable FREEHOLD PROPERTY, situate in the very heart of the City, and comprising the principal portion of that well-known establishment the Spread Eagle, Gracechurch-street, with extensive premises and yard, having a back entrance to Leadenhall-street; the whole comprising an area of nearly 8,000 square feet, and forming one of the most important building sites to be found in the City, its advantageous position renewing it certain to be highly valuable for offices, whereby a very large rental may be created, thus offering a desirable opportunity for the employment of capital. Particulars may be obtained of O. LEASE, Esq. Solicitor, 5, Pancras-lane, Cheapside; of Messrs. WALES & SPARKS, Surveyors, 8, Great St. Helen's, E.C.; at the Mart; and of Messrs. CHINNOCK, GALSWORTHY, & CHINNOCK, Land Agents and Surveyors, 11, Waterloo place, Pall mall

WEDNESDAY NEXT.—IMPORTANT to BUILDERS, SPECULATORS, BUILDING SOCIETIES.—Freehold Land, close to the Victoria Railway Station, and Unfinished Building, close to Victoria-street, Westminster.

MR. MOXON will SELL by AUCTION, at the MART, near the Bank of England, on WEDNESDAY next, 27th APRIL, at TWELVE, by order of the Commissioners under the Westminster Improvement and Incumbrance Estate Act, 1861, a valuable plot of FREEHOLD BUILDING LAND, having an extensive frontage to Elizabeth-bridge-road, close to the Victoria Railway Station, containing about 5,380 square yards; also Three large Freehold Buildings, on the south side of Philippa-street, near Victoria-street, designed and well adapted for setting as chambers or offices; they are at present unfinished, but erected in the most substantial manner, with iron girders, &c., and require but a small outlay to complete.—Plans and particulars may be obtained of Messrs. MAYHEW & SALMON, Solicitors, 39, Great George-street; of Mr. C. W. JACQUES, 4, Victoria-street; at the Auction Mart, City; and of Mr. W. MOXON, 3, St. Martin's-place, Trafalgar-square.

In Bankruptcy.—GOSWELL STREET. Extensive MANUFACTURING PREMISES.

MESSRS. EDWIN FOX & BOUSFIELD are instructed to SELL by AUCTION, at the MART, opposite the Bank of England, on WEDNESDAY, APRIL 27, at TWELVE for ONE, by order of the assignees of Messrs Walker, Walker, & Co. (LEASE, 14 years unexpired, at £77 10s.), 77, Goswell-street, lately in the occupation of Messrs. T. Walker & Co. timber merchants, together with the capital warehouses, offices sheds, two-story stable, and other effects on a manufacturing business, erected thereon, and which, with a judicious outlay, may be converted into a commanding range of first-class manufacturing premises. Held for a term of twenty-one years (save to-day) from the 29th of September, 1859, at £97 per annum.—May be viewed, and particulars had on the Premises; at the Mart; of Messrs. VEVNING, NAYLOR, & ROBINS, Solicitors, 9, Tokenhouse-yard; and of Messrs. EDWIN FOX & BOUSFIELD, 31, Colemau-street, Bank, E.C.

BROOKS & SCHALLER'S AUCTION SALES of ESTATES, HOUSES, GROUND RENTS, REVERSIONS, ANNUITIES, ADVOWSONS, &c will take place at GARRAWAY'S, on the FIRST and LAST TUESDAY of each month. A nominal charge made per lot to include all expenses

The INDEX, published Monthly, of Estates, Country and Town Houses, Reversions, &c. to be Let or Sold, is issued free on application.—AUCTION and ESTATE OFFICES, 25, Charles-street, St. James's, London.

NOTICE.
BROWN & GREEN'S KITCHEN RANGE WAREHOUSE is now REMOVED to the NEW PREMISES, 73–74, Bishopsgate-street Within, a few doors from the late Address, at No. 81. These afford accommodation for a still larger stock of their Patent Prize Medal Ranges and Stoves, Register Grates, and Cooking Utensils, to meet the great public demand; and also for the consequent more extensive execution, by the manufacturers themselves, of all descriptions of hot water, bath, laundry, and steam work.
73–74, Bishopsgate street Within, November, 1863.

COMPETITIONS.

TO ARCHITECTS.—The Directors of the Durham County Permanent Investment Land and Building Society hereby offer the following PRIZES for the best DESIGNS for WORKING MEN'S COTTAGES:—
FIRST PRIZE .... 10 Guineas.
SECOND PRIZE .... 5 „

The Cottages to contain three and four rooms respectively, and the cost not to exceed 160l per Cottage. Prices of labour and materials in the county of Durham will be furnished on applicati n to the undersigned. The architects should keep in view the following qualities:—1. Accommodation; 2. Ventilation and Sanitary arrangement; 3. Style of Elevation; 4. Cost; and 5. Stability. All designs will remain the absolute property of the Society. William Crozier, Esq., C.E. County Architect; Mr. Alderman Williams, Chairman of the Sanitary Committee, Sunderland Corporation; and Mr. Joseph Ridley, Building Surveyor, have kindly undertaken to adjudicate the prizes for the two best designs. The designs are to be sent in to the General Manager, sealed and endorsed "Designs for Working Men's Cottages," on or before the 30th JUNE next, marked with a motto, and with sealed envelope containing architect's address.
SAMUEL WOODHOUSE, General Manager.
Offices, 26, Fawcett-street, Sunderland, April 21, 1864.

CONTRACTS.

NOTICE to WELL-BORERS, &c.—TENDERS are required for BORING to a greater depth the WAR DEPARTMENT WELL at Sheerness.
A section of the well, showing the depth proposed to be bored, may be seen, and a specification of the proposed work may be obtained, on application at the Office, between the hours of TEN and FOUR from the 5th to the 16 h of MAY next.
The Secretary of State for War does not bind himself to accept the lowest or any Tender.
Royal Engineer Office, Sheerness, April 26, 1864.

COAST GUARD CONTRACT.—NOTICE to BUILDERS and CONTRACTORS.
Persons desirous of TENDERING for the ERECTION of a COAST GUARD STATION at Carsethorne, in the county of Kirkcudbright, may inspect the Drawings and Specifications at her Majesty's Custom House at Dumfries, or at this Office, between the hours of TEN and FOUR, from WEDNESDAY, the 27th inst. to THURSDAY, the 12th of MAY now next ensuing, and both inclusive (Sundays excepted).
Tenders to be sent to this Office not later than TWELVE o'clock at noon of the 12th MAY, under seal and directed to the Commodore Controller General of Coast-Guard, and endorsed "Tender for Carsethorne."
The Lords Commissioners of the Admiralty do not pledge themselves to accept the lowest or either of the Tenders.
Dated this 19th day of April, 1864, at the Admiralty, Coast-Guard Office, 12, Spring-gardens, London, S.W.

WAR DEPARTMENT CONTRACT.
NOTICE to BUILDERS.
TENDERS are required for the RENEWAL of the SLATING, LEAD GUTTERS, VENTILATOR COVERS, and FLASHING, and for the REPAIR of the BOARDING under SLATING and LETTERS of the WEST WING of the CAVALRY BARRACK, Brighton.
Parties desiring to Tender for these essential of these Works must call or send their names to this Office, between the hours of TEN a.m. and FOUR p.m. (Sundays excepted) from the 2nd to 7th MAY, 1864, inclusive, when they will receive every information to enable them to take out their quantities.
The Secretary of State for War does not bind himself to accept the lowest or any Tender.
Royal Engineer Office Brighton, 26th April, 1864.

CITY of LONDON.—Very valuable and Extensive Building site, close to Wood street—The Court of Assistants of the Worshipful Company of Sellers are prepared to receive TENDERS for taking a BUILDING LEASE or LEASES, for a term of 80 years, of the whole or part of all that valuable Plot of Land, containing about 14,000 superficial feet, situate close to Wood street, Cheapside, and having frontages, to Falcon street of 130 feet, Hart-street 87 feet, and Monkwell-street 138 feet. A plan of the ground may be seen, and further particulars obtained, on application at the Clerk's Office, at the Hall in St. Swithin's Lane, Cannon street, or to the Company's Surveyor, JOHN COLLIER, Esq. 26, Paternoster-row, Paul's Church-yard. Tenders to be addressed to EDWARD THOMPSON, Esq. Clerk of the Company, at Sellers' Hall, and delivered on or before the 2nd day of MAY next, at TWELVE o'clock at noon.

BOARD of WORKS, WHITECHAPEL DISTRICT.—A meeting of this Board will be held on MONDAY, 16th day of MAY, 1864, at SIX o'clock in the evening, at the Office of the Board, No. 1, Great Alie street, Whitechapel, to receive TENDERS for the ERECTION of a New BOARD-ROOM and OFFICES, at the rear of the present Offices. Plans, sections, and specification may be inspected, and bills of quantities, with forms of Tender obtained, on application to Mr FRICKER, Surveyor, between the hours of TEN and FOUR, at the Office of the Board. Sealed Tenders must be delivered at the Office previously to the hour of meeting, and any Tender which is not upon the form prepared by the Board, and duly signed by the person or persons tendering will be rejected. Persons tendering, or their representatives are required to attend the meeting of the Board. The Board do not bind themselves to accept the lowest or any Tender.
ALFRED TURNER, Clerk to the Board.
15, Great Alie street, Whitechapel, April 20, 1864.

TO SCAVENGERS, CONTRACTORS, and OTHERS.—The Commissioners of Sewers of the City of London will meet in the Guildhall of the said City, on TUESDAY, the 3rd of MAY next, at half-past TWELVE o'clock precisely, to receive TENDERS for CLEANSING the Streets, and for Removing Dust, Ashes, &c., from the Houses of the Inhabitants; and also for Watering certain streets within the said City, for the term of One Year, from Midsummer day next, agreeably to the directions, copies of which may be had at this office. The City is divided for the purposes of these Contracts into four divisions. Each Contractor will be required to enter into and with two approved sureties, in the sum of 500l for each division for Cleansing, and 100l for each division for Watering, for the due performance of the several Contracts, and the consent in writing of the parties proposed as such sureties must be enclosed with the Tenders. The Commissioners do not undertake to accept the lowest Tender in any case; or any, unless deemed satisfactory. No Tender will be received after TWELVE o'clock on the day of treaty; nor will any Tender be received unless it contains enclosed the sum of 20l in Bank of England notes, for each Tender for, in evidence that the same is made in good faith, under seal, and will be returned to each person whose Tender is not accepted, but will be retained in the other cases until the contracts entered into shall have been duly executed by the parties Tendering and their sureties; and in case of such contracts and bonds not being duly executed the said sums of money will be retained by and forfeited to the said Commissioners.
JOSEPH DAW, Principal Clerk.
Sewers Office, Guildhall, 19th April, 1864.

TO SEWER-PIPE MANUFACTURERS, &c.—The Local Board for the District of Bacup, in the county of Lancaster, desire to receive TENDERS for the SUPPLY of EARTHENWARE SEWER and DRAIN PIPES, JUNCTION BLOCKS, INVERTS, and other Materials required for the Drainage of the District. Specification and conditions may be seen, and forms of Tender obtained, on application to Mr. BRIERLEY, Civil Engineer, Blackburn. Sealed Tenders, indorsed "Tenders for Sewer Pipes, &c." may be sent to the undersigned, at the Office of the Local Board at Bacup, not later than TUESDAY, the 3rd day of MAY next.
April 20th, 1864. E. M. WRIGHT, Clerk to the said Board.

CONTRACTS.

TO IRONFOUNDERS.—Parties desirous of TENDERING for the ERECTION of the METAL-WORK to an IRON and GLASS ROOF 52 feet span, to communicate with Mr. ALEX. MILNE, Architect, Northampton.

TO BUILDERS and CONTRACTORS.—Persons desiring to TENDER for REBUILDING the PARISH CHURCH of FORDEN, near Montgomery, can inspect the Plans and Specification at the Church House Inn, in the Parish of Forden, and at the Office of the Architect, in Hereford. The Tenders are to be delivered to the Architect on the 28th day of MAY next, and no pledge is given that the lowest will be accepted.
THOS. NICHOLSON, F.L.B.A. Diocesan Architect.
Hereford, 22nd April, 1864.

TO BUILDERS. — SCHOOL for DAUGHTERS of OFFICERS of the ARMY, LANSDOWN-HILL, BATH.—Persons desirous of SUBMITTING TENDERS for the ERECTION of NEW WING, and carrying out certain alterations and additions to the school building (lately known as the Lansdown College, Bath), are requested to send their names and references to the Honorary Architects.—WILLIAM G. HABERSHON & FITE, 38, Bloomsbury square, W.C.

METROPOLITAN BOARD of WORKS. MAIN DRAINAGE of METROPOLITAN SEWERS in GREENWICH and DEPTFORD.—TO BUILDERS, CONTRACTORS, and OTHERS.—The Metropolitan Board of Works hereby give notice, that they will meet at the Office of the Board, Spring-gardens, S.W., on FRIDAY, the 27th day of MAY, 1864, at TWELVE o'clock at Noon precisely, and will then be prepared to open TENDERS by parties who shall be willing to contract for the CONSTRUCTION of BRICK SEWERS, in or of 4'6" feet 3 inch, or thereabouts, to communicate at the Pumping Station at Deptford, and terminate at Pelton road, with Branch Sewer in Knott-street, Albert street, Victoria road, and Grove-street-hill, with other Works in connection therewith, all situate in the respective parishes of Saint Alphage, Greenwich, Saint Nicholas and Saint Paul, Deptford, in the county of Kent. Parties desiring to submit Tenders can (on and after TUESDAY next, 3rd MAY) be supplied with specification and form of Tender, upon payment of 2l and inspect plans and sections, and obtain other particulars, on application to Mr. J. W. BAZALGETTE, Engineer of the Board, at the Office, Spring-gardens, between the hours of NINE a.m. and FOUR p.m. on SATURDAYS, between the hours of NINE a.m. and TWO p.m. until THURSDAY, the 26th day of MAY, 1864. The Tenders are to be addressed to the Clerk of the Board, and must be delivered at this Office, before FOUR o'clock on the last-mentioned day. No Tender will be received after that hour. The Parties Tendering must be in attendance at the Board, at TWELVE o'clock on the day appointed for opening Tenders. The Board do not bind themselves to accept the lowest or any Tender; and the party whose Tender shall be accepted will be required to provide two approved sureties for the due and satisfactory performance of the works.
JOHN POLLARD, Clerk of the Board.
Spring-gardens, S.W. 28th April, 1864.

TO CONTRACTORS. -TO BE LET, either in one Contract or separately, the several WORKS required in the ERECTION of a new CONGREGATIONAL CHURCH, Scarborough. The plans and specifications may be seen at the new school-room connected with the Bar Church, Scarborough, on and after Tuesday next, and forms of Tender may be had, either by written or personal application, at our Offices, Bradford, from MONDAY, the 2nd, until FRIDAY, the 6th day of MAY, both inclusive, sealed Tenders to be delivered there by TWO o'clock on SATURDAY, the 7th day of MAY, addressed to the Rev. E. BALGARNIE, Scarborough. The lowest Tender not necessarily to be accepted. By order of the Building Committee.
LOCKWOOD & MAWSON, Architects.
Post-office buildings, Bradford; Lincoln's-inn-fields, London.

TO IRON PIER CONTRACTORS.—TENDERS are required for the SUPPLY and ERECTION of an IRON SCREW PILE PIER on South Shore, Blackpool, Lancashire. Specifications to be seen at the office of GEORGE WILLIAMS, 12 Northumberland-street, Westminster, on and after TUESDAY, the 3rd of MAY, 1864.

TO CONTRACTORS, BUILDERS, and OTHERS.—DURHAM COUNTY JAIL.—NEW WING TO THE FEMALE PRISON.—The Visiting Justices are desirous of receiving TENDERS for the COMPLETION of the several BUILDINGS and WORKS of the proposed addition of a New Wing to the Female Prison of the County Jail in Durham. The plans, sections, and specifications for the respective works may be inspected and perused at the Office of WILLIAM CROZIER, Esq. C.E. the County Architect, County Courts, Durham, on and after WEDNESDAY, the 4th MAY next. Tenders properly filled up in every particular, and strictly in accordance with the printed bill of quantities, under seal, and endorsed "Tender for New Wing to Female Prison, Durham," to be sent or delivered to the County Architect not later than TUESDAY, the 17th MAY next. The Visiting Justices do not pledge themselves to accept the lowest or any Tender. By order,
JOHN TIPLADY, Deputy Clerk of the Peace.
Durham, 27th April, 1864.

BUILDERS willing to TENDER for the ERECTION of the new SCHOOLS, St. Mark's parish, St. Saviour's, Southwark, are desired to send their names and addresses at once to the Architect, Mr. R. P. POPE, 8, Kings-road, Gray's-inn, on and after FRIDAY, the 29th instant, between the hours of TEN and FOUR, at which time plans to be delivered at the Office of the Architect, by or before FOUR o'clock, on THURSDAY, the 5th of MAY. The Committee will not be bound to accept the lowest or any Tender.
April 29th, 1864.

TO BUILDERS. —Persons desirous of CONTRACTING for the ERECTION of PARSONAGE HOUSES, at Horby, Warthill, Market Weighton, Bugthorpe, and Fridaythorpe, in the East Riding of the county of York, are requested to apply before May 9th next, giving references, to Mr. CHRISTIAN, Architect, 8a, Whitehall-place, London, S.W. Mr. Christian does not bind himself to reply to any such application.

[For remainder of Contracts see next Page.

WRIGHT, Melbourne, after MONDAY, the 2nd day of MAY, and at the Office of the Architect, where, if need be, the quantities and other information can be obtained. Tenders to be sent to the Architect, H. H. MOLE, Esq. 30, Welbeck-street, London, not later than THURSDAY, the 19th day of MAY. The committee do not bind themselves to accept the lowest Tender.

WANTED, a CONTRACT, for the IRON and WOODWORK of a WAREHOUSE and SHOPS to be built in New Zealand, according to plan, &c. particulars of which will be furnished on application, by letter, to Messrs. SAUNDERS, OTLEY, & MORGAN, Bankers and Army Agents, 9, Waterloo-place, Pall Mall, S.W.

CROWDEN and GARROD (successors to THOS. KENT & CO.), the celebrated PAINTING and GENERAL BRUSH MANUFACTURERS,
PALCON SQUARE, LONDON, E.C.
, Also Manufacturers of the Patent India-rubber Knife-boards, Cocoa-nut Fibre Door Mats, Matting, &c.
T. KENT and CROWDEN & GARROD, are stamped on the Brushes.

STEPHENS'S STAINS for WOOD. A SUBSTITUTE for PAINT, and at HALF the COST.

Mr. STEPHENS has been kindly permitted to make public the following extract from a letter addressed to him by the Rev. R. H. CHITTENDEN, of Littleham, Bideford, near South Molton:—

"The effect produced by the Staining Fluid and Varnish has given such entire satisfaction, that numerous others have requested me to procure for them the quantity now paid for, in order to finish the church."

H. STEPHENS, Chemist, 18, St. Martin's-le-Grand, E.C. late of 54, Stamford-street, S.

CUMBERLAND'S FERRIOXIDE PAINT is now used by Builders, Engineers, Ship Painters, Contractors, &c. &c. as unrivalled in preserving Iron, Wood, Stone or Compo. For Iron work there is nothing equal to it. Its preservative and anti-corrosive properties render it universally applicable. It preserves good boards and roofs (a rich dark red), and, the greatest recommendation of all, cheapness.

PRICE 20s. PER CWT. Samples sent if required.

MANUFACTURED SOLELY BY
HENRY CUMBERLAND,
CHEMICAL WORKS, MILLWALL, LONDON, E.

DO NOT BURN OFF OLD PAINT, but use NAENIARE & CO.'S LETHICIUM, which will remove it clean to the wood in twenty minutes.—Sold at 5s. per gallon, at 11, St. Andrew's-hill, Doctors'-commons, E.C. Brushes, 2s. Success guaranteed.—N.B. Country orders must be prepaid. A liberal discount to the trade. Trade & Export prices at

MARLBOROUGH HOUSE.

TURPENTINE.
GARROD & COMPANY'S ENGLISH TURPENTINE is superior in use to any other, and perfectly free from any offensive odour.
Sample gallons may be obtained at the Manufacturers', price 4s.

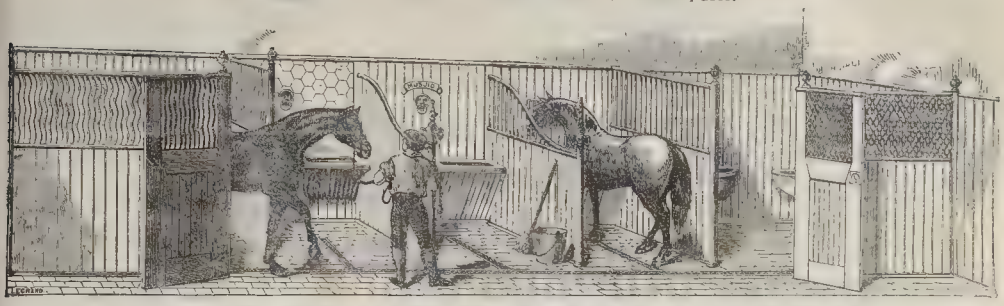
ST. PANCRAS IRON WORK COMPANY,



OLD SAINT PANCRAS ROAD, LONDON, N.W.

APPROVAL OF THE ROYAL VETERINARY COLLEGE.

THE MEDALS OF ENGLAND AND FRANCE,

And the Medals and High Recommendation of the Royal Agricultural Societies of England and Ireland.

SECURED BY EIGHT SEPARATE PATENTS. LATEST, 1863.

PATENT WROUGHT-IRON STABLE FITTINGS

SHOULD BE ADOPTED FOR THE FOLLOWING REASONS, viz.:—

That the BREAKAGES in Cast-Iron Fittings are numerous, and that one fracture from a kick or other cause, may occasion an injury to a Horse, and involve a loss equal to the entire expense of fitting up the Stable. The fear of this has led to the use of wood, and, in the case of Cast-Iron GUTTERS, to the adoption of another and less effective mode of draining.

PATENT ENAMELLED TOP PLATE MANGER, with RACK & WATER-TROUGH,

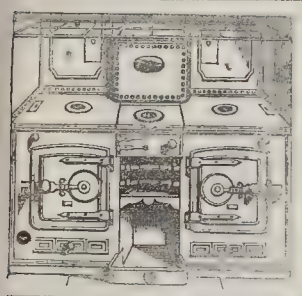
The whole of which, except the Rack, being enamelled, can be kept as clean as a DINNER PLATE.

THE HALTER BALL, ATTACHED BY A NEW IMPROVEMENT, WORKS NOISELESSLY, AND ALMOST WITHOUT FRICTION.

PATENT FASTENINGS FOR THE DOORS OF LOOSE BOXES.

These Catches and Hangings work easily, are self-acting, and cannot be put out of order: by their use all projections by which horses are often blemished are rendered impossible,—advantages peculiarly their own.

THE PATENT HARNESS FITTINGS



Keep the Harness and Saddles in shape, and are constructed so as to admit the air getting to the underside of them when hung up, thereby insuring a quick and perfect airing from any wet or moisture.

EVERY DESCRIPTION OF STABLE FURNITURE.

THE TIVIDALE COMPANY, LIMITED

(Late JOHN H. PORTER & CO. of the Ebro Works, Tividale, and late of Birmingham),

Are prepared to undertake the MANUFACTURE and CONSTRUCTION of

ALL KINDS OF WROUGHT AND CAST IRON WORK.

The class of work contracted for and manufactured by the late Firm has consisted chiefly of Iron Bridges (among others the Lambeth Suspension Bridge in London),

Iron Roofs, Sheds, Stores, and Lighthouses; Iron Columns, Girders, and Fire-proof Floors;

Smiths', Founders', and Boiler-makers' Work generally.

The Works at Tividale, near Dudley, are situate in the heart of the Iron and Coal District of South Staffordshire, and thus conveniently placed for delivery to the several shipping ports—London, Liverpool, Hull, Gloucester, and Bristol.

The Messrs. PORTER continue their personal superintendence, as Managing Directors, in London and at Tividale; and it is hoped that the Company will enjoy a continuance of those favours hitherto so liberally extended to the late Firm.

FIRE-PROOF CONSTRUCTION.—

FOX & BARRETT'S PATENT.

This improved system of fire proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private

The system combines ECONOMY with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete, so constructed that each floor becomes in effect a beam of artificial stone with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the Patent,

MR. BARRETT,
12, YORK BUILDINGS, ADELPHI

CAUTION to ARCHITECTS and BUILDERS.—

In consequence of complaints arising from the substitution of INFERIOR and SPURIOUS ARTICLES instead of SMITH'S PATENT DOUBLE-ACTION DOOR SPRINGS; SMITH'S PATENT WEATHER TIGHT WATER BAR; and SMITH'S PATENT WEATHER TIGHT CASEMENT FASTENING for FRENCH WINDOWS;

The above are most respectfully requested to observe that all GENUINE ARTICLES are stamped with the NAME and ADDRESS, SMITH, Patentee, 69, Princes-street, Leicester-square, London; and SUCH ONLY are WARRANTED.

DRAUGHTLESS VENTILATION INFALLIBLY SECURED BY

BOYLE'S PATENT DOUBLE LEVEL WINDOW VENTILATORS.

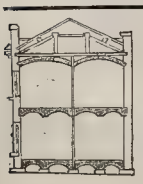
EXHIBITION PRIZE MEDAL, 1862, AND MEDAL OF ROYAL AGRICULTURAL SOCIETIES OF ENGLAND AND IRELAND



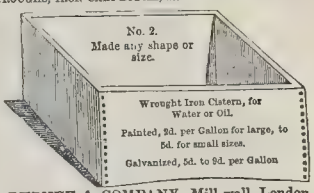
MUSGRAVE'S PATENT STABLE AND HARNESS FITTINGS.

MUSGRAVE'S PATENT HARMLESS LOOSE BOXES. MUSGRAVE'S PATENT IRON COW-STALLS AND PIGGERIES.

Architects who have not seen these Fittings are requested to write for Engravings, as they are unlike those of any other maker, and were admitted to excel all the work of their class in the Exhibition. They can be seen in first class stables in almost every county in England and MUSGRAVE, BROTHERS, are now fitting several very large establishments under directions of London Architects, noted for adopting only what is the best of its kind. Particulars of these, as well as of MUSGRAVE'S PATENT SLOW COMBUSTION STOVE, will be forwarded on application to

MUSGRAVE, BROTHERS, ANN STREET IRON WORKS, BELFAST.

THE DENNETT ARCH.



Allowed to be the cheapest fireproof construction known, and used with the greatest success for the last ten years in the Midland Counties, and has been adopted by G. G. Scott, esq. for the New Foreign Offices, used in any form of arch, groin or dome; turned to any length, width, or height, forming a perfect floor and ceiling in one mass, from 2½ inches in the crown to any required thickness.

Address to the Patentees,—A. & R. DENNETT & CO. NOTTINGHAM.

TESTIMONIAL.—"I have made use of Messrs. Dennett & Co.'s material for Fireproof Arching, and though I have, happily, had no practical experience of its efficiency as against fire, I can bear witness to its strength, and its extreme convenience of application. I have made use of it in positions in which I should have found it difficult to introduce any other fireproof material, and it has this advantage, that the arches constructed of it are so entirely in one mass that they cover the space like a compact shell or inverted basin, and are, consequently, almost wholly free from lateral pressure.
"GEO. GILBERT SCOTT, 21, Spring Gardens London."

BY HER MAJESTY'S ROYAL LETTERS PATENT.

WILSON'S DOUBLE-ACTION SCREW SPANNER,

MANUFACTURED BY

JAMES HEELEY & SONS,

Mount-street, Birmingham.

The superiority of this Spanner consists in its novel and rapid mode of adjustment by a double action screw, and its new and convenient arrangement of curved handle and oblique jaws, which, combined with its superior strength and excellent workmanship, render it by far the best and handiest tool of its class hitherto produced. It is being extensively used by Engineers, Manufacturers, Machinists, and Railway and Steamboat Companies, and can be had of all respectable Ironmongers.

TO BUILDERS, JOINERS, CONTRACTORS, &c.

THE "GENERAL JOINER."

SAMUEL WORSSAM & CO having long felt the importance of introducing a LABOUR SAVING MACHINE, which by combining several operations at a moderate cost, should meet the requirements of builders and others engaged in the conversion of timber, beg to offer for this purpose their "General Joiner" as above, which in its present greatly improved form will, with 2 horse power, do the work of at least fifteen skilled joiners, in SAWING, CROSS CUTTING, and SQUARING, PLANING, and THICKNESSING, MORTISING, TENONING, GROOVING, TONGUEING, RABBETTING, BORING, BEADING, MOULDING, CHAMFERING, &c. &c.—For priced illustrated circulars, apply to S. WORSSAM & CO Saw-Mill Engineers, King's-road, Chelsea (sole manufacturers), where the "General Joiner," and samples of the work may be seen.

POWIS, JAMES, & CO.

ESTABLISHED 1744.
AUSTIN'S IMPERIAL PATENT SASH and BLIND LINES
To BUILDERS, CARPENTERS, and BLIND MAKERS.
J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his

IMPERIAL PATENT FLAX SASH-LINES,

of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.
They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

LIGHTNING CONDUCTORS.
R. S. NEWALL & CO. Patentees of the COPPER ROPE LIGHTNING CONDUCTOR, supply the same, with the point and all staples, complete for fixing, at the following prices:—

DEVAUX'S VIEILLE MONTAGNE
THICK ZINC ROOFING on IMPROVED PRINCIPLES,
JAMES W. TYLER, CONTRACTOR,
12, ABINGDON STREET, and 1, WOOD STREET, WESTMINSTER, close to Victoria Tower.

THE FURNISHING OF BED-ROOMS.
HEAL & SON have observed for some time that it would be advantageous to their Customers to see a much larger selection of Bed-room Furniture than is usually displayed, and that to judge properly of the value and effect of the different descriptions of Furniture, it is necessary that each article should be placed in separate rooms. They have therefore erected large and additional Show-rooms, by which they are enabled not only to extend their Show of Iron, Brass, and Wood Bedsteads, and Bed-room Furniture, beyond what they believe has ever been attempted, but also to provide several small rooms for the purpose of keeping complete suites of Bed-room Furniture in the different styles.
Japanned Bed-Room may be seen in complete suites of five or six different colours, some of them light and ornamental, and others of a plainer description. Suites of Stained Deal and Pine Furniture, Painted Deal, Oak, and White Pine are also set apart in separate rooms, so that Customers are able to see the effect as it would appear in their own rooms. A suite of very superior Gothic Oak Furniture will greatly be kept in stock, and from time to time new and select Furniture in various woods will be added.
Bed Furnitures are fitted to the Bedsteads in large numbers, so that a complete assortment may be seen, and the effect of any particular pattern ascertained as it would appear on the Bedstead.
A very large Stock of Bedding (HEAL & SON'S original trade) is placed on the BEDSTEADS.
The Stock of Mahogany Goods for the better Bed rooms, and Japanned Goods for plain and Servants' use, is very greatly increased. The entire Stock is arranged in eight rooms, each 25 feet long by 12 feet wide, and two large grounds floors, the whole forming as complete an assortment of Bed-room Furniture as they think can possibly be desired.
Every attention is paid to the manufacture of the Cabinet work, and they have just erected large Workshops on the premises for this purpose, that the manufacture may be under their own immediate care.
Their Bedding trade receives their constant and personal attention, every article being made on the premises.
They particularly call attention to their Patent Spring Mattress, the Sommier Elastique Portatif. It is portable, durable, and elastic, and cheaper in price than the old Spring Mattress.
HEAL & SON'S ILLUSTRATED CATALOGUE of Bedsteads, Bedding and Bed-room Furniture sent free by Post.—196, 197, 198, Tottenham-court-road, London.

WILLIAM DAWBARN & CO.

PRICE LIST ON APPLICATION.

IMPORTANT TO ARCHITECTS, ENGINEERS, BUILDERS, RAILWAY, AND OTHER COMPANIES.

VIEILLE MONTAGNE ROOFING ZINC.

Company's General Agency, 12, Manchester Buildings, Westminster.

Zinc properly laid has been proved by most extensive and long experience in France, Belgium, and Germany to be a most secure, durable, and economical covering, and is now preferred to all other materials for roofs. Its extreme lightness makes it most valuable for covering buildings requiring large spans with comparatively light framing. On a rough calculation it may be estimated that not less than 41,000,000 square feet is the average quantity of Roofing surface now annually covered in the above countries alone. Within the last few years persevering efforts have been made to introduce into England proper workmanship, in accordance with the principles which are observed on the Continent, and which alone can secure the sound and perfect construction of a Zinc roof. To aid in extending as much as possible the knowledge of these simple rules, models showing all the details are to be seen in the Architectural Exhibition in Conduit-street, and the following, selected out of a very great number of recently constructed roofs, are referred to as examples:—The Patent Granary, West-India Docks; Copenhagen Works, Limehouse; a private house in Holland Park; Homes for Poor Merchants' Clerks, Muswell-hill; a large Warehouse, 77, Thames-street; Ship roof, Sheerness Dockyard; the Victoria Station, Pimlico; the Stations in the Metropolitan Railway; the Stations of the Madras Railway Company (400,000 feet); the Warehouse of Messrs. Oakes, Brothers, & Co. Madras (20,000 feet); the Refreshment Rooms at the Exhibition; the Verandah of the Horticultural Society's Conservatory; Gloucester Railway Station; Messrs. Horniman & Co.'s Tea Warehouse, Wormwood-street; Messrs. Hoare & Co.'s Brewery, Smithfield; Cape Town and Wellington Railway (60,000 feet); Fifty new Dwelling Houses at Palace Gardens-terrace, Kensington; Twenty ditto, Inverness-terrace, Bayswater.

Plans, Estimates, and all useful information will be furnished, without charge, by applying to either of the Directing Architects.

JAMES EDMESTON, 5, Crown-court, Old Broad-street.
R. G. FISHER, 12, Manchester-buildings, Westminster.

N.B. No covering can be more economical, durable, and secure than Zinc when well laid, but good Zinc badly laid will spoil the roof, and, with a view still further to encourage good work, a special Discount will be allowed to all persons upon the Zinc used in roofs, when certified by either of the above Architects to be properly laid.

THE LAND SECURITIES COMPANY

(Limited),
Capital, £2,000,000.
DIRECTORS.

His Grace the Duke of Marlborough, President.

The Directors of the International Financial Society (Limited), acting as Finance Committee.

John Ennis, esq. M.P.

Col. Fulke Southwell Greville, M.P.
Sir John Charles Dalrymple Hay, Bart. M.P.
James Mackie, esq. M.P.
Sir Laurence Palk, Bart. M.P.
Sir Henry Strachey, Bart. M.P.
William Dargan, esq.
Henry Fletcher, esq.
Sir John Gray.
John Horatio Lloyd, esq.
Hon. Wemyss Napier.
Hon. Henry Petre.
Sir Charles Rich, Bart.
Philip Twells, esq.

OFFICES.—Chief Office, West End, 32, Charing-cross, S.W.; Branch Office, East End (54, Old Broad-street, E.C.), Office of International Financial Society.

The Company will make advances, repayable with interest, at fixed terms, or by instalments, or by terminable annuities, upon the security:—

1st. Of landed estates, first-class house-property, and real property of all descriptions and tenures, and of all estates and interest therein.

2nd. Of rates, dues, assessments, and impositions of all descriptions, raised or imposed by or under the authority of any Act of Parliament, public or private Royal Charter, Commissions of Sewers, Drainage, or other sufficient legal authority.

3rd. Of charges and securities of all descriptions upon or affecting landed estates, and all real property and tenures, made, given, or issued, under the authority of any Act of Parliament, public or private.

Temporary advances will be made on landed estates, and on houses in course of erection, with or without the deposit of title deeds; and they undertake the negotiation of special investments.

For further information, and forms of application, apply to the Hon. WILLIAM NAPIER, Managing Director, the Land Securities Company (Limited), 32, Charing-cross, London, S.W.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.

ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. Purchasers should order the genuine "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such materials. All Workmen who have once used the Patent Zinc Paint would never willingly use any other Paint for their best work.

DURABILITY.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,
WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

GUTTA-PERCHA MILL-BANDS.

—The Gutta Percha Company beg to state that the increasing demand for the Gutta Percha Strapping for Driving-bands, Lathestraps, &c. fully justifies the strong recommendations they have everywhere received. Their durability and strength, permanent contractility and uniformity of substance; their non-stretch; liability of injury from contact with oils, grease, acids, alkalies, or water; and the facility with which the only joint required can be made in bands of from 200 to 300 feet long, render them superior to leather for almost all working purposes, and decidedly more economical. Every variety of Gutta Percha Articles, such as Tubing, Soles, Pump-buckets, Fire-buckets, Bosses, Union joints, Flasks, Bottles, Bowls, Toilet-trays, Curtain-rings, Galvanic Batteries, Talbotype Trays, &c. &c. manufactured by the Gutta-Percha Company, and sold by their Wholesale Dealers in town and country.

VOL. XXII.—No. 1108.

The Designs for proposed Museums, South Kensington.

HE judges appointed to award the premiums in the Museums Competition noticed in our last number,* are Lord Elcho, M.P., Mr. Tite, M.P., Mr. Pennethorne, Mr. Fergusson, and Mr. David Roberts, R.A. We have been informed that they have already determined upon the work for which they intend to give the first premium. We hope that such is not the fact. The considerable experience we have had in the examination of competition designs, goes to convince us that it is scarcely within human power, in a case of this nature, and under the difficulties which result from insufficient exhibition-space, to discover distinctive features of designs, to come to conclusions on the all-important principles, and to register a decision which is to be of value, all within a fortnight, or rather that number of days or hours which individual members of the Committee in this instance can have had to spare. The greatest possible misapprehension prevails, most strangely even with architects, or those who are in the habit of competing, as to that which is possible. Judging from manner of looking at the drawings in an exhibition, all forget that the perspective view which has been hung in the best place, is not the most important part of the exposition of the design; and that a plan which has been so placed as to require a ladder to get up to it in order to measure its parts or to read writing upon it, or a section so close to the floor that the height of a room could not be measured without a painful twist of the body, may be chief elements in the demonstration of the author's intentions concerning that part of the building wherein its utility is involved. They forget the loss of time, and bewilderment, which result from the arrangement of drawings of the same kind sometimes above "the line," and sometimes below; from the placing a title sometimes at the foot and sometimes at the top of a drawing; from difference and sometimes the absence of scales; and from the separation of one design from another, even by a red line, being not sufficient. Competitors should be only glad to learn that proper time has been taken to obtain a decision which may tend to the objects of the projectors of a building. In the present case, as we said in our last, in order to attain the ends, the solution of certain difficult questions is necessary. They are not only those of lighting. But confining our attention, just now, to these latter, let us express the hope that the Committee will report with the full apprehension that their decision will have one of two characters: that either, it will be a decision to be not acted upon at all, and therefore will not justify the course taken by the First Commissioner, including their own appointment; or it will be such as may be acted upon, and committing us to the possession of a building, good, or bad and not what the merits of the designs and the architectural talent of the country would have permitted of.

* See p. 289, *ante*.

We have alluded to the effect of the "instructions;" but there is advantage to be derived from study of all the requirements of the proposed building, prior to any refusal of suggestions which the designs collectively would afford. The extent to which the question of lighting is mixed up with other questions, important in themselves, could hardly be supposed without detailed examination of all the drawings; and the actual system of the British Museum Natural History department, seems to have been scarcely examined. As to lighting, the number of stories altogether, and the number which are to be well lighted, are most important. Otherwise important is the position of the "attendants' rooms." In Bloomsbury, the basement has, we believe, quite a different character to that which would be supposed in judging from Mr. Hunt's design for a new museum. It may be regarded as the depository or storehouse of the most important part, or the bulk, of the collection. Here may be found specimens recently received, and which are not ready for exhibition. Here are laid together specimens of skins of the thousands of species of birds, most interesting to the naturalist, but out of the limits of appreciation of the public, and more conveniently and usefully preserved in the skin than if stuffed. Such specimens may be examined by men of science better even in the basement, whence they would otherwise have to be brought, than in a crowded room. The basement-story therefore should be as well lighted as are the sunk basements of ordinary houses, and perhaps rather better. Much work of various kinds is done in the basement of the British Museum; bulky objects have to be moved; a tramway is laid down; and probably there are "lifts" to the different floors. Scarcely any of the competitors seem to have apprehended these points. The rooms "for the attendants," as in the original programme, we must consider to have been misnamed. They should be "in contiguity" to the exhibited collections, as explained, and not be separated from them, as in several of the designs; and they should be distributed as much as possible, not concentrated. They are intended each as a convenient intermediate resting-place for the object or specimen, between the storehouse, or basement, and the glass case in the exhibition.

Further examination of the drawings has led us to perceive even greater importance in side-lighting than we ascribed to it. The covering a great area with an iron and glass roof carried by very slender supports, might seem to allow of the nearest approach to the advantages of side-lighting, combined with utilization of the entire area as exhibition-space. But independent of the question of safety from fire, and other reasons, it must not be forgotten that small galleries are much the best for study of objects exhibited, and that the Crystal Palace arrangement where the eye is distracted, and where sizes, even to men best acquainted with the objects, are reduced, is the worst that could be selected.*

Capital suggestions may sometimes be obtained from designs that are not altogether prepossessing. Thus in this competition, the design marked "Thorough" has a suggestion as to lighting, which ought at least to be taken into consideration. If reported upon, by those who have the care of the collections, as not entailing inconvenience in arrangement of the objects, it might turn out to be a proper starting-point of the entire planning. The feature which we allude to is shown in a section taken across the galleries and courts separating them. It will be immediately understood by the form of one of the windows of an artist's room, which is very common, as in houses about Newman-street. There a window may be seen carried above the ceiling-line, and even so much as to cut off a portion above the floor-line in the room over. But with some form of window-seat to the upper room, this may be no inconvenience. The artist gets not only a light falling downwards on his model, but light extending to a farther part of the room; and he gets more light, just as he would were the buildings on the opposite side of the street reduced the two or three feet in height. The author of the design "Thorough," has adopted the arrangement described, with little modification, for the lighting of his lower galleries (where there are two stories) from the courts. In the gallery of the first floor, the skirting and a small portion of the flooring would be cut off, and the splay would be hidden by a portion, supposed to be not serviceable as exhibition-space, of a wall-case or table-case. In the gallery below, there is a splay at right angles to the other, or a cove, which is glazed. There is still space for a low gallery in the court between the buildings; but of course that would require the basement to be given up. The perspective view in this design shows some good grouping of masses. A large dome, a modification of that of St. Paul's Cathedral, not well drawn, appears in the centre of the view. In some of the masses, there is a range of small arch-headed windows at the top; whilst the lower story, having few windows, and those of small size, does not suggest the good lighting essential to a museum; however, the plan shows that the galleries next the external walls are also lighted from the courts. In the recessed portions of the front, and to the north where the windows of the old refreshment-rooms seem to have been taken as the *motif*, there is sufficient glass-surface. In the plan, the arrangement of a corridor with the galleries opening from each side of it, or transeptwise, corresponds with what we have regarded as the best arrangement. The corridor is parallel with the eastern front, and the galleries are at right angles. It is obvious that the feature which led to our noticing the design, might allow of narrower courts, or of a somewhat reduced height in the lower story. Thus the arrangement would conduce to economy. The Patent Museum is near the centre of the ground, and runs north and south.

A design which also deserves attention for some of its features, is that marked "Utilitas." We may not think what is shown in the perspective view to be quite free from the "horse-and-carriage bazaar" appearance which the popular voice will have to be that of the 1862 building; and the arrangement of steps, and in two places, in a central-hall, reproduces one of the features of the interior of that building, with questionable advantage. There is just this alternative from having to go up steps and down to the other side, of each obstruction, in accomplishing the entire length, 400 feet, of the hall: there are sideways, through, or under the top-flights of the staircase. Cleverness indeed is shown in the planning the landings or prospect-places, each in combination with a staircase from ground-floor to gallery. The *baldacchino* on the landing does not exactly please us. But the author's general design, and explanation of his views, should assist the settlement of the question of the principle of planning and lighting for museums. We may mention that in his general plan, the author has sought to grasp not only the whole ground bound-

* In our last we referred to one of the designs as having columns to support, with a division-wall, the galleries. Columns are what they appear at three feet distance, in the dim light of the Royal Gallery: but we should have written *piers*. From these piers spring arches. The wall-cases within the arcades could scarcely be well lighted.

ing the Cromwell-road, but the entire areas which were occupied by the Annexes and ground somewhat further north than the Conservatory, or up to the Kensington-road. As the level at the junction of Exhibition-road and the Kensington-road and that of one of his floors would be the same, and the level of the road at Queen's Gate and that of another of his floors would be the same, he points out that access might be obtained to each of his floors without steps. The advantage, if there could be one having regard to distance, would be very slight. However, it was not the sole reason for his arranging his building in three stories in place of the two of nearly all other competitors. By the three-storied arrangement, or four-storied including the basement, he has contrived to cover very little ground with the buildings for the Natural History Museum and Patent Museum, and yet to provide the large hall. Thus, his design may afford hints. He covers little more than one-third the ground required by the other competitors; although his hall alone would be 400 feet by 80 feet. His basement also is lighted. The museum-rooms on the ground and first floor, are lighted at the sides; and each room is divided by piers and arches into a broad centre and narrow side spaces, on the plan of nave and aisles. The cases are placed transversely to the external walls, between the wall-piers and the internal piers. Thus to the visitor, the arrangement is that of recesses, which are all well-lighted, and in each of which the objects can be seen without inconvenience from the crowd: whilst the whole centre would be kept free. Several other competitors have seen the advantage of a similar arrangement of the cases. The galleries of the top story have a lantern-light, and a waggon-headed ceiling; the latter the same form as the roof-covering. The author says the form is chosen for external effect; but it is necessary to non-interference with the light for his galleries on the opposite side of the court. The springing of the curve however starts from but 5 feet from the floor-line. This would reduce his exhibition-space considerably. Not contemplating the use of the centre-space of each gallery, in the ground and first floors, he has been able to reduce the height of each story to about two-thirds that of other designs. The hall is roofed in semicircular form. The ribs spring from piers boldly projecting, and narrow on the face, where they are decorated by columns, in the upper level, bearing arches, and by sedent figures on the ground. The rooms for the staff are placed at the angles of the building where there are pavilions. Amongst the author's aims in the plan has been great regularity,—to be consistent with the re-arrangement occasionally necessary in museums. The Patent Museum is not kept distinct. The required space for the Natural History Museum is provided without use of the central hall; and the general plan comprises areas of the like character which might be at any time covered. Although the Exhibition Building may be said to have suggested the central hall, the author is anxious to direct attention to the fact that, whilst his building can be easily extended, and whilst the visitor will be everywhere in a spacious apartment, he will never be liable to be bewildered. The distinction between the Exhibition Museum and the Educational Museum,—the latter as suggested by Professor Owen, in connexion with the lecture theatre,—has been understood by this competitor and one or two others. In the exterior of the building, the chief effect is due to the square, and square domical capped, masses which there are at the angles and in the centre of the principal front, each having a sort of belvidere story, and groups of sculpture. In the lower part of the angle pavilions, however, an immense window in each face, lighting three stories, and more than one room in each, sadly wants filling-in work. The intermediate portions of the front have merely arch-headed windows, excepting that those of the chief front have buttresses to the narrow piers, with a sedent figure at the base of each.

It has been seen that in the first design we described (in our last article) the original Crystal Palace system of lighting, with some modifications, is adopted, excepting in the galleries next external walls. The space on the ground floor without floor over, was made wide, and the space under an upper floor was kept narrow. Walling, however, was substituted for iron columns, and with considerable skill. The basement was not lighted. In the other design, the ground-floor space under another floor was made broad, and the space without floor over was narrow (though wider than in Mr. Hunt's design), and open to the sky. Use, also, was made of the basement.

Whilst this last-named design adopted an arrangement of building with open courts that were less than thirty feet wide, the author of the design marked "Sublime Molar Atrium" adopts the converse system of large quadrangles, which might be covered with iron and glass, and are surrounded by buildings that seem narrow in proportion. Of course, exact comparison of designs giving the same wall and table space, would require that the superficial, or rather cubical, contents of each should be taken out, after the fact of the provision of the space demanded had been verified; but this labour we have deemed within the duty of the judges rather than ours. The general plan in the design now before us, has four angular masses or pavilions, one at each of the angles of the whole ground, and recessed centres to the south, east, and west fronts, each with a portico in the middle. The distance between wings of the Cromwell-road front, is, of course, such as to make that recess the widest; and the depth from the road to the portico is considerable. The portico here is joined to the front line of the wings or angle masses, by quadrant lines on plan. The reasons adduced for the recessed disposition of this part of the plan, are important. The author thinks, that a long line, such as that of the Cromwell-road frontage, and made to coincide with the southern boundary of the land, (as in the case of the building of 1862, he would have said,) would be monotonous, if without break, and that no pavilions or raised wings of reasonable height, would produce the desired play of outline; that, in the contracted space of a street, any central or large feature, viewed near, would overwhelm the other features; and that, consequently, open space, such as his plan provides, is a requisite, whilst it allows of the effect imparted to architecture by trees and shrubs which would be placed. The effect on this side is further studied in the design of his portico, which is hexastyle recessed between two wings that are terminated by turrets, and has a flight of steps the full width, reached from side flights. Over the portico are three semicircular windows, each window under a gable. A small elevation of the Cromwell-road front helps his explanation. The eastern end of the ground is to be covered first, following the programme; and here, behind the portico of the recessed centre, is the theatre for lectures. The perspective of the eastern portion of the building is taken from a supposed point on the opposite ground (the intervening houses being shown as though in course of removal); thus, as with other designs, though not so unfairly, the representation is not one of what could be seen. The author not inappropriately observes of the Horticultural Gardens gallery, proposed to be left, that it would have the appearance of a make-shift, unless modified. Such modification he would effect by removing the wall of division, and thus allowing the gardens to appear. The fact of the Commissioners being in possession of this portion of the Exhibition building should certainly not be allowed to trammel contrivance of the best plan for the whole site. The galleries surrounding the courts are of two stories. The flooring above the lower gallery is partly carried by trusses in ornamental metal-work, and by iron columns in line with the wall-cases; and the same arrangement of columns, with an ornamental iron roof-truss, is repeated in the upper gallery. The ground-story is lighted at the sides, and the upper-story at the top. In the principal fronts, a story is added where there are pavilions. A recess, corresponding with an intercolumn in the centre of this pavilion, and in the attic an arch springing from one part of the entablature to another, as well as statues over some of the columns, at once point to the authorship of the design. Where the attic to a pavilion is finished with a balustrade, the pedestals are surmounted by *chimeræ* or vases, or by obelisks with lions at the base. The pavilions are of stone; but the rest of the work is of stone and yellow brick. The lower story of the external fronts, excepting the pavilions, has arch-headed windows, with frames of novel design. In the lunette-light at the centre of the arch, the frame has a carved representation of a bird, different in each of the instances. The upper story shows no windows. Pilasters, each one of ordinary width being on the face of a pier or broader pilaster, carry a frieze without architrave and charged with tablets for inscription of names; whilst a block-cornice is surmounted by the *chéneau*, the highly ornamented member in place of a blocking course, which is almost peculiar to French architecture, and whereof we shall have to speak in our concluding article on the work of Mons. César Daly. The wall of the upper story, only relieved by the pilasters, and otherwise blank, is after a manner that is never quite satisfactory to us; besides, side-light is, we have considered, more valuable than top-light: but the design throughout is remarkable for careful study of its details.

It is a subject for remark, that this competition has called forth expression from many authors of designs, of an opinion that has been lately growing, of disadvantages of stone as a material, in the disintegrating or corroding, and the discolouring atmosphere of London. Brick and terra-cotta have been adopted by many of the competitors, and in particular by one of them, reported to be of South Kensington, whose design bears the Prince of Wales's feathers, and the motto "Ich Dien." But varying the ornament, as will be hereafter referred to, nearly all the designs could be executed in terra-cotta, as well as those claiming to be made specially for the material. The author of the design just mentioned, is one of those who treat the building as though within a park. He would, however, set back the eastern front, in great part, and eventually the western front, to a considerable distance. He would not adopt a similar course as to the south front, excepting in the centre to a slight degree. His general plan has for its main features, two parallel ranges of building, one fronting east and the other west, and each with projecting wings, and a centre grouped as a pavilion. The eastern and western buildings would be joined together by two smaller ranges, so as to enclose a court in the centre of the ground, to be roofed with glass. The eastern buildings are all that are to be described. They are devoted exclusively to the Natural History Museum: the Museum of Patents is placed to the north, coming forward to the line of the Exhibition-road and northward nearly to the entrance to the gardens, a residence for the director of police only intervening. In the Natural History Museum galleries, the author has done scarcely more than copy Mr. Hunt's plan. Thus there is but one entrance to an area of 215 feet by 183 feet; to which should be added the space, at least 60 feet by 40 feet, in the wing. The galleries of the first-floor, together with the roofs, are carried on iron columns, the roofing being in alternate wide and narrow spans, the latter being placed over the well-hole openings of the upper floor; and all having glazed openings in the slopes. The arrangement of the floors corresponds generally with that of the building of 1862, excepting that the ground-floor space beneath upper flooring or galleries is large, whilst area of well-hole opening is small, instead of as in the 1862 building, where those proportions were reversed. The well-holes in the design now before us, are several of them 1 foot less in width than they were in Mr. Hunt's design; but the height of the lower floor is 34 feet instead of 30 feet; and that of the upper floor is 29 feet 6 inches, instead of 25 feet, to the ceiling at the collar. The breadth of a gallery from well-hole to well-hole, may be considered as 45 feet. The attendants' rooms are badly placed. They are not, as they should be, distributed and placed one closely in connexion with each gallery or division of the entire museum,—just like the nurses' rooms in an hospital on the pavilion principle: but twelve of them are placed three together on each floor of the wings; whilst the remaining thirteen are in the building which was devoted to the refreshment-rooms of the Exhibition, before mentioned as to be preserved. In the building exclusive of the advancing wings, a third story is added along the eastern façade: the back of the range, where the museum has to be lighted, and the wings, are of two stories only. The third story is a low one, excepting in the pavilion, where the centre breaks forward with coupled columns, and where there is a pediment and flat-topped roof, rising high above the roofing of the ends of the same pavilion, as these latter themselves rise above the attic story. In style and manner the architecture is Palladian. A French character indeed appears in the centre; and, the ground-story of rusticated piers and large arch-headed windows, is rather Florentine. The upper story has large arch-headed windows and narrow piers with pilasters; and throughout the front, the idea is given of an area of window surface that would afford ample light. A wide

porch, with coupled columns and rusticated shafts, projects from the main entrance. Oval windows to light the basement appear in the front. Circles in the spandrel-spaces are filled with sculpture representing animals; and the tympanum of the pediment represents a crowd of animals and Noah's ark. The pilasters are shown as of red granite. In speaking of the materials generally, however, the author refers to the use of terra-cotta and moulded brickwork almost entirely throughout the exterior; and he remarks that moulded terra-cotta can be adopted with economy, only where great repetition is required. In one drawing, he shows an alternative treatment of the design, omitting the red granite pilasters, and depending entirely upon red and yellow terra-cotta. The upper windows are divided into three lights by ornamental shafts of terra-cotta, which carry sub-arches and circles in the head. In the lower windows a similar system prevails; but they are of two lights. Projecting piers between the windows are ornamented with foliated work in panels; and similar ornament is introduced in the frieze. The resources of terra-cotta are certainly considerable; and the skill of manufacturers in casting has greatly increased of late. But every material requires that its special properties should be studied; and attempts to get the same effect as is dependent upon the nicely set stones, and straight lines and worked arrises, of cornices and mullions, may result in demonstration of inferiority and of the fact of imitation, such as will at any time stamp a would-be work of art with ill-success. There is certainly in the terra-cotta design now before us, much that might remove it from the application of such remarks.

The drawings marked "Not known and yet well known," generally attributed to a certain architect (who however denies the authorship), include two distinctive arrangements of plan, and principles of disposition and construction, which we have before referred to as competitive. In both cases, the whole site is embraced. In "Design A," the author adopts two-stories, and the principle of lighting the lower story from large open courts. In place of making these long and narrow, say 150 feet by about 20 feet as in Mr. Hunt's design and so many of the other designs, he makes them generally 80 feet by 43 feet; whilst two of them, he makes 105 feet by 85 feet. In "Design B," he has the principal rooms and galleries on one floor, excepting as to the Patent Museum, where there would be two floors as required by the "instructions." Admitting that side-lights are preferable for some purposes, he yet puts prominently forward advantages of light, ventilation, and wall-space, which all he considers there are in the skylight system. The general arrangement of both plans is characterized by symmetry, and by the provision of central halls at all intersections. One such hall forms the centre of the eastern portion of the building, a staircase leading from it to the right, and another to the left. On the Cromwell-road side, the centre is set back to get a large quadrangle, the front of which is enclosed by an arcaded screen with a covered way. After crossing the quadrangle a portico is reached; and the entrance leads to an octagonal hall 70 feet across. This feature of the plan is proposed to be considered as the Albert Memorial Hall. It is surmounted by a dome resembling in some of the more prominent features, the dome of St. Paul's. Right and left of the octagonal hall, are halls, each 220 feet by 80 feet, and 60 feet in height, lighted from above, for sculpture and occasional exhibitions. Parallel with these latter halls, are passages, and extensive ranges of offices. The author would use the building of the Exhibition refreshment-rooms, only temporarily for some purpose: he considers, not unreasonably, that the ultimate removal might be economical. The external character of the architecture, without any recognizable invention, is not so meritorious as the planning. Each front may be described simply as having an order enclosing two stories, and with the columns, which are everywhere, only varied by making them sometimes salient and sometimes as three-quarter columns. The pediments to the three centrally placed porticoes, are even ill-proportioned; but the large dome, and two smaller domes, give effect to a design that would probably have been better, but for the lack of time for its production, which the author speaks of.

The design with the motto "Fortiter et Fideliter" has the mark of a well-known hand, just as much as if the author had signed it. A small perspective view of the building as covering the entire site, displays a multitude of domes. There is a large one in a central position: two next in size are in positions very similar to those of the building of 1862; and the smallest domes terminate the four angles of pavilion-blocks, or break the length of the Cromwell-road front. There would be twenty-one domes in all. The centre of this front is slightly recessed, and is joined to the pavilions of the ends by quadrants. The domes, which are octagonal on plan, are intended to be of iron and glass, but with effective ornamentation in bands and filling-in, and the glass being coloured. Having the pointed form, and no heavy lantern, they give a Saracenic character in part to the design. The treatment of the windows, which are arch-headed and grouped in various ways, and of an arcaded porch, however, is nearer to the character of rich Italian Romanesque. Great skill is shown in the design of the octagonal base to the dome, and the junction decoratively of this base with the square form of plan below. Much taste also is shown in the introduction of *antefixæ* of novel form, in ornament generally, and in the introduction of sculpture. Of the plan we cannot speak so well. The relative sizes and requirements,—in fact, what constitute planning,—seem to have been scarcely studied at all. Mr. Hunt's arrangement of the galleries, and one of roofing in alternate large and small spans, are adopted, with iron columns; and the well-holes are 20 feet in width. The rooms for attendants are detached from the museum. A contrivance is suggested for the rain-water pipes in preference to that where the columns are made to serve. The pipe is placed in a central position to a group of four columns. This method is thought most convenient for the removal of obstructions and the prevention of leakage.

We have gone into the notice of some of the designs at great length; and we shall have little room for description of the remaining number. Our readers, however, will have the opportunity of seeing the drawings themselves, on this Saturday, and during at least a month commencing from Monday next, when the exhibition will be opened to the public. Mr. Cowper is anxious that Mr. Maclise's work in the Royal Gallery should be retarded as little as possible, but seems also desirous that the works of the competitors should be examined by as many persons as may wish to see them.

THE ART-UNION OF LONDON.

The continuing and extraordinary success of the Art-Union of London, while other associations professing to have the same objects in view rise and pass away, shows the soundness of the principles on which it was established. Ramifying as it does all over the world, and binding together a multitude of persons of kindred taste, the Art-Union may be regarded as a bond of peace: love of art is a good basis of human brotherhood.

The Adelphi Theatre was well filled on Tuesday last, on the occasion of the annual meeting of the Association.

The president, Lord Monteagle, having taken the chair,

Mr. Godwin, F.R.S., Hon. Sec., read the following Report:—

In commencing their present report, your Council think it may not be useless to refer to the grounds on which the Art-Union of London originally rested its claims as well on the assistance of artists as of the public. First, it was said, there is a large class of persons much impressed with the value of the Fine Arts and anxious to encourage them, who, on account of comparatively limited resources, are unable to purchase what they would wish to possess. To this class the Art-Union offers the means of at once encouraging deserving artists, and of getting around them, sooner or later, works of art. There is another class who, in many cases with ample means, have hitherto failed to evince any interest in the progress of the arts, mainly from the want of having their attention properly directed to the subject. To these the Art-Union makes a systematic and continuous appeal, and opens the way to a new enjoyment. Thirdly, it was shown that, as a result, works of merit are frequently returned unsold from the public exhibitions, to the discouragement of their producers, who, with aid, might have done good service and reflected honour on the country.

The operations of the Association during the years that have elapsed since these arguments were put forth have happily tended to lessen somewhat the strength of the latter two grounds; but all still remain sufficiently strong to maintain its claims for earnest and wide support.

Its original promoters felt that, in proportion as the public taste was cultivated, so necessarily would a knowledge of the real qualities of art increase,—so would artistic labours be more and more appreciated,—so would the producers of such works be sympathised with and fostered. The result has unquestionably justified their expectations. Contrast the little feeling in respect of such matters that was to be found amongst many classes of persons when this Association was first formed with the amount of interest that is now manifested; compare the sums then expended in the purchase of modern works with the amount of money now annually devoted to that object, and the justification will be evident.

From the early period in the history of the Art-Union which has been referred to, the Association has been uniformly prosperous; increasing at first, year by year, in a manner to be marvelled at, and then settling down to an annual income ranging from 10,000*l.* to 14,000*l.* a year, according to the circumstances of the time, the popularity of the print or other work offered to each subscriber, and perhaps the prosperity of the country and the colonies. The subscriptions for the present year amount to the sum of 12,469*l.* 16*s.* If the number of subscribers were regulated wholly by the value of the work of art presented to each in addition to the chance of a prize at the annual distribution, the amount on the present occasion might well have been expected to be even larger, the opinion of competent critics having been expressed unanimously in praise of Mr. Noel Paton's illustrations of "The Ancient Mariner," given with the text, and bound as a book. The *Art Journal*, for example, pronounces it "the greatest work offered to the subscribers of the Art-Union of London since the establishment of the society;" and similar opinions have been given on all sides.

For the ensuing year, every subscriber will be entitled to receive a fine line engraving by Lumb Stocks, A.E.R.A., after W. P. Frith, R.A. Macaulay relates, as illustrating the state of society at a particular period, how Claude Duval became captain of a formidable gang; how, at the head of his troop, he stopped a lady's coach in which there was a booty of four hundred pounds; how he took only one hundred and suffered the fair owner to ransom the rest by dancing a coranto with him on the heath. It is this incident that the artist has depicted. The attendants are secured, the contents of the carriage have been turned out by the gang, while the lady, with forced gaiety and mortal fear, admirably shown, is dancing with the highwayman,—none the less a scoundrel because well dressed and protected to a certain extent by the licence of the times. Mr. Stocks has translated the picture into black and white very successfully.

Some other engravings of great importance are in hand for future circulation.

It seems tolerably clear, notwithstanding the objection of a few, that with the general public a fine engraving continues to be a greater inducement to subscribe than other artistical productions of the same cost. A taste for engravings pervades every grade of society, differing, of course, very greatly in different persons and at different ages; and the cultivation of this taste promotes refinement. With some, and these are at the lowest, the enjoyment is confined to the pleasure with which prints are regarded by the organs of vision. For their complete enjoyment, however, the knowledge, the imagination, and the judgment of the examiner must be brought into play, and, to the extent to which these qualities are cultivated, the taste is improved. It has been well urged, that if we would better our taste for engravings, as well as for every other branch of art, we must mature our judgment, increase our knowledge and familiarity with works of real excellence, and devote ourselves assiduously to that special department in which we aspire to superiority. A true taste may be said to consist in a perception of what is agreeable to the eye, joined to what gives pleasure to the imagination, and is justified by the judgment; and this must include a susceptibility to nobleness, and a heart to love all truth, harmoniousness, and beauty; that beauty which is the special care of art:—

> "Art seeks to penetrate the inner veil,
> Where Beauty sits conceal'd, but oftener fails
> Thau finds the hidden labyrinth to her feet.
> Every creation of victorious Art
> But vibrates to that centre."—*C. Swain.*

It was a charming notion entertained by the heathen, that love of beauty gave wings to the soul; as thus it could mount into purer regions for enjoyment.

The list of prizes for the present distribution includes *fac-similes* of a drawing, "Young England," by Mr. A. D. Fripp, executed in chromo-lithography by Mr. Vincent Brooks; and of a drawing entitled, "Wild Roses," by Mr. Birket Foster, chromo-lithographed by Messrs. Hanhart; both very successfully produced: also proof impressions of a beautiful series of etchings, by the late Mr. R. Brandard.

In the production of the chromo-lithograph "Young England," twenty-five stones were used; and, for "Wild Roses," twenty-six. The process is one requiring great nicety, taste, and skill; as may be supposed when it is remembered that saying "twenty-five stones were used," means that every example passes through the press twenty-five times, each colour being applied by a separate printing.

The list of prizes will also include a certain number of examples of the Bust, in porcelain, of H.R.H. the Princess of Wales, prepared for the Association last year. Possessors of this bust will be pleased to hear that the Council have received an intimation by command of the Prince of Wales, that his Royal Highness "admires it exceedingly." The Council have arranged to produce in the same material a bust of the Prince of Wales, from a model by Mr. Morton Edwards. It is to be hoped that when this, the companion bust, is completed, it may elicit a similar satisfactory testimonial from the Princess.

With reference to another work prepared for the Association, the Memorial Tazza of H.R.H. the late Prince Consort, it was a great satisfaction to the Council, after forwarding the tazza to Buckingham Palace, to receive a letter by command of the Queen, assuring them "that her Majesty will value very highly this very creditable example of printing on Ceramic ware." Shortly afterwards the Queen desired to have three of the Tazzas made for her. On these being sent to the Palace, with a request that her Majesty would be pleased to accept them, Sir Charles Phipps, in the course of his reply, said,—

"I have received the commands of the Queen to inform you, that although there exists a general rule against the acceptance of presents, her Majesty willingly makes an exception in favour of the Art-Union of London, and that her Majesty deeply feels and appreciates the motives which have led to the production of this Memorial Tazza."

The lamented death of J. B. Bunning, esq., and of William Herbert, esq., and the retirement of J. E. Soden, esq., left three vacancies in the Council. These have been filled by the election of T. G. Sambrooke, esq., R. Broadwater, esq., and J. Leaf, esq.

Mr. Bunning, whose decease is mentioned, was the City Architect, and in that capacity made many successful endeavours to aid art and artists; notably by the part he took in inducing the corporation to appropriate a large sum of money for the production of statues in marble for the adornment of the great hall of the Mansion House. Mr. Herbert, himself a collector of works of fine art, was for many years a most active and useful member of the

Council: his friendship is held in affectionate memory by those who were his colleagues.

To their honorary assistants all over the world, the Council offer their warmest thanks; as they do also to the Society of British Artists, for the use of the Galleries in Suffolk-street, for the exhibition of the works of art selected by the prizeholders of 1863. The Council would here, too, express their appreciation of the efficient services of Mr. T. S. Watson, B.A., assistant secretary, who has now discharged the duties of that office for twenty years.

In their last report your Council stated that they had offered a premium for a life-size figure or group in marble to be competed for by finished models in plaster. The particulars of the competition and some account of the Association were translated into French and Italian, and published in several foreign journals. In reply to the offer, fifteen models were sent by the time specified, and three arrived from abroad too late to be admitted to competition.

By the courtesy of the Committee of Privy Council charged with the superintendence of the Department of Art, the models were exhibited in the North Court of the South Kensington Museum, and were visited by very large numbers of persons.

The Council, after due deliberation, selected three of the models as best meeting their requirements, viz., "A Wood Nymph," "The Lady of the Lake," and "Imogen entering the Cave," and ultimately awarded the premium to the "Wood Nymph," the sculptor of which was found to be Mr. C. B. Birch, of Keppel-street, Russell-square, who is now proceeding with the group in marble. The premium will be hereafter charged to the funds of the year in which the statue may be allotted, or otherwise made available. To the other competitors the Council return their thanks.

The account of receipts and expenditure may be stated in outline thus; a detailed statement will as usual, be printed with this report:—

Total amount of subscriptions received		£12,469 16 0
Cost of printing report, almanacs, &c.; clerks, rent, exhibition and other expenses, including agents' commission and reserve	£2,794 18 10	
Total cost of volumes of illustrations of the "Ancient Mariner"	3,453 17 2	
Amount allotted for prizes	6,221 0 0	
		£12,469 16 0

The reserve fund now amounts in the whole to the sum of 11,549*l.* 10s., and by its progressive accumulation it will place the Art-Union upon a most solid and permanent foundation. The Council have had under consideration a proposal for erecting, on freehold ground, a building of its own, uniting offices, warehouse room for its valuable stock, capacious galleries, and a good-sized meeting-hall for the occasional assembling of the members. This is an object to be kept in view whenever a favourable site may present itself.

The accounts have been audited by two members of the general body of subscribers, G. H. Griffin, esq., and H. Mellnish, esq., and three members of the Finance Committee.

The amount set apart for the purchase of works of art from the public galleries by the prizeholders themselves is divided in this manner:—

32	works at	£10 each.
32	"	15 "
20	"	20 "
20	"	25 "
12	"	35 "
12	"	40 "
10	"	50 "
6	"	75 "
3	"	100 "
2	"	150 "
1	"	200 "
150		

To these are added:—

4 Statuettes in Bronze, "Caractacus," from the statue by J. H. Foley, R.A.
150 Statuettes in Porcelain, "Go to Sleep," from the original by Joseph Durham.
150 Busts in Porcelain of H.R.H. the Princess of Wales, from the original by Mrs. Thorneycroft.
150 Pairs of Bas-reliefs in fictile ivory, of subjects from Milton, by E. Wyon and R. Jefferson.
200 Chromo-lithographs, "Young England."
200 Chromo-lithographs, "Wild Roses."
170 Volumes of Etchings, by R. Brandard.
30 Silver Medals, commemorative of Bacon, the sculptor.

making in all 1,204 prizes, in addition to the volume of illustrations received by every member, and the Parian busts due to those who have subscribed for ten years consecutively without gaining a prize.

In accordance with the wishes of a large number of members, the smaller prizes will be allotted by numbers drawn from the vessel, in the same manner as the picture-prizes; but, as the drawing of these prizes would occupy more time than the proper business of this theatre would allow, the drawing will take place at the office to-morrow morning, at ten o'clock, when any members desirous of being present are invited to attend.

It is satisfactory to the Council to find subjects early mooted in their annual reports now engaging more general attention. As early as 1841, it was urged in one of our reports with reference to the influence of this Institution, that the arts of design being generally promoted, and the public taste enlarged and improved, the manufacturers of the country connected with design would receive a similar impression. "Thus," the report went on to say, "considerable assistance may be rendered to that movement now going on in the various tasteful productions of the hand and the loom, and the Art-Union may be directly instrumental in creating new objects of industry and of enjoyment, and therefore in adding at the same time to the wealth of the country." It was fairly argued that, as the collection and exhibition of works of art had not merely tended to the moral elevation of the people, but had given a stimulus and direction to their industry, so a direct encouragement of the higher branches of art would have a similar effect in a still greater degree. In another early report, it was said,—"To lead the arts to the aid of our manufactures has been one of the objects kept steadily in view by the Council of the Art-Union of London from the date of its establishment. Apart from the increased commercial value thereby given, it is much to be desired in an educational point of view, that all articles of furniture and in daily use should have the forms of beauty which art can give. As these become familiar to the eyes of all, that which is inelegant and unsymmetrical becomes unpleasing, and the general standard of taste is necessarily raised." The things which are around us influence the mind. Homes are the manufactories of men, so to speak: the well-ordering of them is a matter of no trifling moment.

Since, then, this doctrine has obtained more general acceptance, it is seen that the want of artistic taste amongst the people has been a loss to the country, and England is already reaping benefit from increased means of art-education even in a pecuniary point of view. Our exports, which have enormously increased, show it; for the greatest increase is found in articles involving taste in the production of them,—such as plate, silk manufactures, pottery, and paper-hangings.

This advance in industrial art has even startled our tasteful neighbours, the French; has led to various official reports, and to steps for the improvement of their schools of art. A recent writer, there, appeals to the great masters of the art not to disdain industry, but to give it their support; not, as it were, to imagine that nothing is pure in art but upon the condition of being materially useless. He reminds them that Raffaelle drew arabesques on the walls of palaces, and designs for tapestry; that Titian, Tintoretto, and Paul Veronese did the same, and knew that in giving a high artistic character to various industries, they augmented the influence, the riches, and the glories of their beloved country.

Drawing is beginning to take its proper place in English educational courses. Even partial instruction in it gives power of accurate observation and improves the mind. The number of persons learning drawing in 1863, in connexion with the Department of Art, were 16,480 in art schools with 79,305 children in poor schools, being an increase of more than five per cent. on the returns of the previous year. Upwards of 18,400*l.* was paid by them in fees, seeming to show that the instruction is appreciated.

The Schools of Design, if they have not yet produced any large number of creative designers, are thus giving some knowledge of art to thousands, improving their taste, and so forcing on manufacturers who have to supply them to better things; and providing, as the Art-Union has aided in doing, a cultivated and therefore appreciative public for true artists. Some part of the charm of every work of art the gazer must find within himself. The highest qualities of a picture can scarcely be obvious to an uncultivated spectator.

The demand in England at this time for pictures is very great, and the prices paid for the works of our best painters are larger than has ever been the case before. Money judiciously spent in this way is well invested. The first purchaser of the "Strawberry Girl" gave Reynolds fifty guineas for it; the last, the Marquis of Hertford, was delighted in obtaining it for 2,100 guineas.

Artists should be paid for *thinking*. Pictures that can be understood at a glance do little service to art. If writing for a cursory perusal by those who run has been the bane of literature in our time; so painting without thought, the products therefore requiring no thought, is ruinous to art.

From the first incorporation of the Art-Union of London the annual report has called for the union of painting with architecture,—the adornment of large spaces in public situations by the best painters; and has urged upon corporations and other powerful bodies the appropriation of some of the funds at their disposal for such purposes. What was done in this direction by the municipal councils of the Italian republics and by guilds in early times may be pointed to for imitation. Many will remember, for example, the remarkable Scuola di San Rocco, in Venice, built in the sixteenth century by a fraternity of merchants—a fraternity still in existence—who employed Tintoretto, as well as Titian and others, in a less degree, to cover the ceilings and walls of the hall with grand pictures. For 300 years these works have attracted and charmed the lovers of art of all countries, and will long continue to do so.

A great advantage claimed for mural painting, and which can scarcely be denied it, is that, besides spreading the salutary influence of art amongst the most numerous classes, it withdraws the artist himself from influences entirely individual and evanescent.

Some noble wall-pictures are now on the eve of completion in the Palace of Westminster; not to mention others which, though less important, give reason to hope that the practice of so employing painting, of so setting up pictures where they can be seen by all,—pictures in which may be found,—

"The spiritual presences of absent things,"

is increasing and will be persevered in.

The study of fine works of art tends to the elevation of character. Art lifts the mind a little out of the real up to the ideal; and may indicate the something more that the striving soul longs for. As Mrs. Browning sings, the artist has,—

"To keep up open roads,
Betwixt the seen and unseen, bursting through
The best of your conventions."

If, then, as some of our wisest thinkers have said, the elevation of the mind ought to be the principal end of all our studies, which indeed are of little service if they do not in some measure effect that, art must always be a powerful agent in education.

Art, let it be remembered, is something more than the simple imitation of physical nature,—it is inspired by thought, includes thought. A picture is a translation of nature by the *mind* of the producer; and much the world owes to the artist who translates it well. It goes to establish the supremacy of mind over matter. It is a triumph of mind. And what triumphs can be nobler than those of the mind,—triumphs that injure none, but, while adding to the fame and fortune of the artist, tend to the glory and advantage of the country?

GEORGE GODWIN,
LEWIS POCOCK,
Honorary Secretaries.

Lord Monteagle, in moving the adoption of the Report, described it as being at once encouraging and instructive. He thought their annual Reports formed the most interesting part of the modern history of art in England. In the course of its twenty-eight years of existence the Art-Union had met with many difficulties; and it had been, though sympathised with by all classes, entirely unassisted by public support, either from Parliament or the Government for the time being. It was to themselves that the Society owed its present position. The Society had not only extended its influence and its usefulness among the people to a greater extent than almost any other popular establishment, but it had produced a most intimate and binding connexion between the artists and their countrymen in all parts of the empire. He was glad to see as a happy and encouraging example of the services of their artistic diplomacy that we were at length likely to have a suitable building for the reception and exhibition of our noble works of art. He saw it mentioned in the daily papers, and he presumed they had some authority for their statements, that at a not very remote period a new National Gallery was to be built. The chairman then referred to the recent date of the foundation of the National Gallery. Since that time our country, as the country of peace and freedom, had become the asylum of all the wandering pictures of Europe. It was a noticeable fact that, in this commercial country, Manchester, Liverpool, and Leeds, the greatest centres of our commerce, had also given our artists many of their largest and most persevering purchasers. Wealth could have no more justifiable object than the encouragement of art; and he was happy to see that men who had well earned their riches in commerce had the good taste and feeling to promote the fine arts.

Mr. Jas. Fahey, as representing artists, seconded the motion, and wished particularly to dwell on the sentiment of the report: the figures would speak for themselves. The motion having been carried unanimously,

Professor Donaldson proposed a vote of thanks to the honorary secretaries, and stated that the society owed a great deal of its present success to the unpaid exertions during many years of these gentlemen, to each of whom they desired to present a testimonial, in the shape of an artistic table-ornament in silver, of the value of 250*l.* Towards this sum 350*l.* had been already collected, the matter being quite independent of the ordinary funds of the society.

Mr. Joshua Butterworth, F.S.A., seconded the resolution, which was carried unanimously.

Mr. Godwin, in responding for Mr. Lewis Pocock and himself, said, though grateful, they would both have preferred that the subscribers should not have been troubled as to a testimonial. Both Mr. Pocock and himself had given their exertions in the cause because they believed the Art-Union would effect good, and the result had justified their expectations. In concluding, he proposed a warm vote of thanks to Mr. Benjamin Webster for allowing the society the use of his theatre; and to Mr. R. Phillips for superintending the arrangements.

Mr. Bennoch, F.S.A., seconded the motion, which was carried unanimously; and Mr. Phillips returned thanks.

Miss Helena Manuel and Miss Blanche Medhurst having consented to draw the prizes, and Mr. C. J. Atkinson and Mr. W. Fearis to act as scrutineers, the distribution was proceeded with. Lord Monteagle being forced to leave,

Mr. S. C. Hall, F.S.A., was called to the chair in his stead.

The following is a correct

LIST OF THE PRINCIPAL PRIZEHOLDERS:—

200*l.*—Brewer, Capt. Robe, S. A.

150*l.*—Ryder, T., Kent Dispensary; Shepherd, J. W., Grimsby.

100*l.*—Dunlop, Miss, 63, Torrington-square; Watkins, T., Deptford; Gamgee, J., Edinburgh.

75*l.*—Badger, H. P., Rotherham; Drillio, Mrs. G., Hamilton, N.S.; Haine, G. J., Farringdon; Hall, R., King's-road, Brighton; White, Mrs., 50, Borough-road; Woolcot, W., Suez.

50*l.*—Foster, R. C., Halifax; Gould, Miss, Maida-hill, W.; Hutton, H., Adelside, C.G.H.; James, A., G.W.R.; Jones, W. B., Tollington Park; Lewis, H., Rotherhithe; Powerscourt, Lord, Grosvenor-square; Shaw, F., Dundee; Sparin, W., Fenchurch-street; Tuke, Dr., 37, Albemarle-street.

40*l.*—Carruthers, J., Lockerbie; Costerton, C. F., Eye; Dobson, H. A., 8, Onslow-terrace; Hannam, W., Bury, Manchester; Heggie, W., Kirkcaldy; Holas, V., Constantinople; Littlehales, E. H., Winchester; Mann, J. H., 3, Albert-road, Regent's Park; Sewell, G., Clapham Rise; Taylor, F., Staines; Thurburn, Charles, Brighton; Woolfe, T., Shadwell.

30*l.*—Bain, W., 1, King William-place; Feeney, J., Edgbaston; Gillman, A. W., Southfields; Greenway, J., Plymouth; Howard, S., Brewery, Lewisham; Jameson, Mrs., Thornhill-square; Lovell, R., 11, Holloway-terrace; Middleton, W. W., Hitcham; Oliver, T., Holloway; Ramsbottom, J., Orme; Ross, Mrs., Edinburgh; Solly, S., 6, Saville-row.

25*l.*—Broadhurst, S., Longton; Buttemer, Rev. R. D., Millbrook; Cunliffe, Rev. G., Wrexham; Davis, F., Pershore; D'Oyley, R., Christchurch, N.Z.; Fletcher, Mrs. R. M., Launceston, S. A.; Gardner, Mrs., Eaton-square; Hamilton, W., 26, Old Jewry; Hall, J., Birmingham; Hawke, C., St. Columb; Hopcraft, G., Bilister-square; Mackrell, S. M., Wandsworth; Mosley, Miss Fanny, Woolton; Nicholson, J., 14, Cambridge-terrace; Pilcher, D. H., 34, Russell-square; Powerscourt, Lord, Grosvenor-

square; Rudge, B., Bedford; Squire, L., Falmouth; Stanton, G., Shrewsbury; Wells, Geo., Retreat, Clifton.

20*l.*—Ackroyd, Mrs., Nantwich; Ashford, J. H., Tiverton; Bartlett, W. E., 6, Bath-place; Dean, R. S., 5, Cleveland-gardens; Dunbar, A., Sunbury; Elliott, E., Wimborne; Emberlin, Mrs., Marlborough; Freeman, N. W., Northampton; Hawkes, G. W., Norwood, S. A.; Hewardine, G. F., Hull; Jeffries, E., Kandy, Ceylon; Jupp, R., 98, New Bond-street; Lewis, D. H., Cornhill; Mumford, A., Walthamstow; Parker, T. J., Melbourne; Stuart, W. J., 45, Pall Mall; Walls, John, Edinburgh; Wemyss, C., Cawthorn; Whitehall, Col. J., per Smith & Co.; Young, S., Limehouse.

15*l.*—Aitkin, R., Linlithgow; Ardaseer, J., Kurrachee, E.I.; Bailey, R., Nelson, N.Z.; Bowker, J., Gray's-inn-square; Beale, C., Birreguna, Ceylon; Blyth, N., Adelaide, S.A.; Clark, W., 76, Borough; Clayton, F., Upper Vernon-street; Conybeare, W., 15, Warren-street; Copeland, H., Chelmsford; Dixon, J. J., Great Baddow; Duffield, J., Manchester; Fairbairn, T., Hamilton; Fisher, T., Greenwich; Ford, T., Leith; Foster, W. S., Lincoln's-inn-fields; Grove, J., Halesowen; Guy, J., Grimsby; Hale, B., Hartfield; King, E., Lynn; Laurie, R., Dunfermline; Lewis, W., Bath; Murton, J., Croydon; Neate, R., Duke-street, Adelphi; Norris, T., Liverpool; Pearson, Miss A. S., Malvern; Purnell, J. J., Streatham-hill; Robinson, Capt., Ryde; Schloesser, Mrs., Bryanstone-square; Thomson, J. C., Quebec; Wright, H., 7, Great George-street, S.W.; Zipcy, M., Smyrna.

10*l.*—Booth, W. S., Coventry; Boyden, T. H. Stoke Newington-green; Boycott, Mrs., Bridgnorth; Croome, J. D., Fishsweet-place, Belfast; Deering, S., Adelaide, S.A.; Finlay, G. L., Edinburgh; Foster, W., Broomsgrove; Frith, F. H., 122, Leadenhall-street; Gibbin, V. W., Geelong; Glover, A., Longton; Jeeves, A., Preston; Kidd, A. G., Dundee; Le Feuvre, J. E., Southampton; Longson, John, Stockport; McCrystal, P., Cape of Good Hope; Purrott, J., Examiner's Office, Customs; Richardson, A., 39, Sutherland-street; Scovell, H., Portswood, Southton; Smeaton, J. Perth; Stuart, R., Liverpool; Stewart, W., Paisley; Thacker, R., 38, Southampton-street; Tovey, W., Nelson, N.Z.; Turner, W. Sheffield, Valentin, Jas., Cow-cross; Wade, H., Derby; Watkins, R., Pimlico; Whiffen, H., St. John's Wood; Wilson, W. H., 25, Coldbath-square; Whittey, G., King Edward-street; Wordsworth, W., Leeds; Young, R., 3, Furnival's-inn.

Entitled each to a Bronze Statuette of "Caractacus."—Austin, R., Halifax, England; Black, Capt., per Smith & Elder; Fenn, T. H., Nayland; Spilsbury, B., 1, Huggin-lane.

Entitled each to a Porcelain Statuette, "Go to Sleep."—Anderson, F. B. Hessle, Hull; Aste, H., Hampstead; Atkins, C., St. John's Wood; Attwood, J. A., Bermuda; Banks, J. R., Leeds; Baron, G. E., Strood-hill; Barr, Maj.-Gen., Saffron Walden; Bartlett, J., Euston-road; Bevilaqua, L., Lindoch, S.A.; Biggs, B., Laurence Pountney-hill; Bignell, Mrs. W., Hobart Town; Black, J., Higher Broughton; Borthwick, J. A., Gresham-street; Bowen, D., Alfreton; Breeze, —, Jamaica Coffee-house; Brunton, W. W., West Hartlepool; Butter, D., Upper Norwood; Cawse, G., Peckham-rye; Chissholme, J., Berners-street; Clarke, G., Northampton; Clarke, J. H. Adelaide; Costerd, E. C., Turnham-green; Davis, M., Piccadilly; De Winton, Lieut.-col., Oriental Club; Dickon, W. J., Tehran, Tripoli; Dimsdale, Miss J., Islington; Dingley, R., Launceston, Cornwall; Dobson, J., Birkenhead; Dodds, Miss, Gosburton; Dumain, G., Kentish Town; Edmonds, F., Aberdeen; Elliot, G., Ashford; Emmerson, —, Brixton; Filmer, J. F., Berners-street; Fisher, J., Sowerby; Fisher, W., Barking; Folliott, Rev. J., Canonbury; Forbes, K., Cruden; Forrest, D., Brompton; Foulsham, C., N. Brixton; Froom, C. P., Lincoln's-inn-fields; Frost, W. E., A.R.A.; Gape, W., Melbourne; Gardener, J., Folkestone; Gatenby, Miss L., Bicton; Giblin, J. T., Geelong; Gordon, Miss, Edinburgh; Gore, Lady Grace, Brighton; Greenwood, J. B., Bingley; Guy, H. J., Portsmouth; Hankinson, G., Manchester; Harding, E., Reform Club; Harrold Bros., Great St. Helen's; Harris, J., Dulwich-common; Hartnell, P., Dalston; Harvey, J., jun., Bishops Stortford; Hawkins, W. L., Christchurch; Hill, Mrs. S., Gopsall-street; Hinds, Miss, Demerara; Hitchcock, G. B., San Francisco; Hoad, L., Rye; Hodgson, J., Clapham-common; Hoffman, A., Copenhagen; Holden, J. P., Manchester; Horsfall, W. C., Leeds; Jackson, Miss, Carshalton; Kane, C., Gawler-town; Keppel, Admi. Sir H., Bishopstoke; Lancaster, T., Clifton; Leveson, E. J., Singapore; Liddington, A. J., Sydney; Livesay, A. F., Portsmouth; Llewellyn, J., Stone; M'Crae, C., Oxford; Mannings, G., Kensington Palace; Mercer, J., Clitheroe; Moffat, H., Edinburgh; Moon, T., Thornley; Morrish, F. A., Plymouth; Mulligan, M. B., Belfast; Muzio, J., sen., Highbury; Nathan, A., Hartlepool; Newton, F., Westbourne-terrace; Nichols, J., Coburg-road; Nichols, S. A., Darwen; Northumberland, the Duke of; Nutman, Jno., North Holt; Oakley, J. J., 183, Piccadilly; Parkinson, Rev. Dr., Grimsby; Pease, J. B., Middlesborough; Perry, Miss, Islington; Perrin, Mrs., Buckingham-street; Peters, Rev. H., Sunderland; Preston, J., Liverpool; Prince, J. F., Manchester; Purchase, E., Merthyr Tydfil; Rayley, Mrs., Southwold; Rich, Mrs., 22, Bayswater-terrace; Ricketts, J., Sheffield; Rhodes, J., Ripley; Robb, W., Stepney; Rook, E., Sittingbourne; Rose, Jas. A., Salisbury-street; Rush, W., Craig's-court; Russell, D., Dunfermline; Russell, J., Bannstead, Sandford, W. A., Wellington; Savage, G., Northampton; Savile, C., St. George's-road; Senior, B., Batley; Sharp, W., Birmingham; Sharp, W., Handsworth; Sharples, J., Blackburn; Shelley, Lady, Christchurch; Skerman, J. C., Waltham; Smale, R. G., Hoxton; Smith, Job, Yarmouth; Smith, J. B., Feltham; Spencer, T., Liverpool; Spokes, E., Cholsey; Stanfield, —, Bradford; Stevens, J. C. M., Torrington; Stephens, Mrs., West Brompton; Steward, J. R., Jedburgh; Struthers, R. V., Natal; Stubbs, J., New Brunswick; Sudbury, J., jun., Halstead; Sydenham, J. P. W., Islip; Tanner, J., Christchurch; Taylor, T. G., Edinburgh; Thompson, C. G., Newcastle-on-Tyne; Tomlinson, T., Hackney; Tuckett, T. H., Dunfermline; Turner, C., 84, Park-street; Vincent, J. E., South Audley-street; Wade, J., Brompton; Walmsley, H., Clapham Park; Walters, J., Borden; Walton, C. E., Acton; Warden, J. W., Finchley-road; Wates, E., Gravesend; Weston, T. A., Bury, Lancashire; Wickham, Capt., Winchester; Wilkinson, Miss, Oxted; Wood, E., Aylesford; Wright, J., jun., Middlewich; Wyon, E. W., Stanhope-street; Young, W., Bolton; Young, W. W., Hartlepool.

New York Tenements.—There is a house in New York having 68 rooms, 8 feet by 10 feet, containing 144 adults and 138 children.

NEW MATERIALS FOR THE LIFE OF DANIEL MYTENS.

In a MS. Book of Warrants (preserved in the British Museum) under the signet of King Charles I. when Prince of Wales, the following document, hitherto overlooked by all who have written on the history of art in England, is to be found. It supplies the earliest illustration we possess of King Charles's well-known love for the fine arts, and is in every respect important:—

"*To o^r Right trustie and wel-beloved Sir Henry Hobart, K^t., &c.*

Right thrusty and wel-beloved Wee greet yo^u well &c. Whereas in and by one Indenture dated the 29th day of August [1624] last made betwene o^rselfe one thone parte and Daniel Mittens of London Picture Drawer one thother part for considerations us movinge Wee haue demised and granted unto the said Daniel Mittens all that messuage or tenem^t wth the yard and garden plott behinde the same adioyninge as it is nowe enclosed wth a bricke wall sett and being at the upper end of St. Martin's Lane, in the parish of St. Martin's in ye Fields butted and bounded as in the said Indenture is expressed of which premisses Wee now stand possessed for divers yeare yet enduring by and under a lease thereof made by Allen Turner of the p'rish of St Martin's in the Feilds aforesaide unto Sr Paterick Murray and by ye said Sr Paterick Murray late assigned unto Us To haue and to hold the said messuage or tenem^t unto the said Daniell Mittens his Executors and Assignes from the feast day of St John Baptist last past before the date hereof unto the full end and term of 12 yeares and a halfe from thence fully to be complete and ended yeilding and payinge the yearlie rent of vj^d [sixpence] at the feast of St Michaell the Archangell onelie if it shalbe demanded, wth divers covenants in ye said Indenture conteyned, as in and by the said Indenture, &c. Dated at Newmarkett, 3° Decem. 1624.*

The following payments were made to Mytens in the reign of James I., and are now first published:—

"To Daniel Myttens upon the Counsells warr^t dated at Whitehall xxv^to May 1620 for making the picture of the Earle of Nottingham by his Ma^ts comaundem^t with a guilded frame for the same, xxvij^li.^"†

This was the Lord High Admiral Earl,—the Armada Lord Howard of Effingham,—at this time an old man.

Three years later he commanded a higher price for his full-length portraits:—

"To Danyell Mittens uppon lyke warr^t dated quarto Aprilis 1623 for drawinge his Ma^ts picture at the length wch was given to Mounsieur Boyschott ambassador from the Archduke, xxx^li.^"‡

"To Daniell Mittens, upon like warraunt dated ix°. Octobris 1623 for a picture of the Prince his highnes [Charles I.], drawne at length and delivered to Don Carlos de Coloma ambassador from the King of Spaine, xxx^li.^§

19 July, 1624. Grant to Daniel Mytens of a pension of 50*l.* per ann. for his encouragement in the art and skill of picture drawing, on condition that he do not depart the realm without warrant from king or council, and that he do not refuse such service and employment in his said art as shall be reasonably required of him."

Among the miscellaneous state papers in the custody of the Master of the Rolls is the following entry:—

"2 July, 1625. Warrant to pay to Daniel Mittens his Majesty's picture drawer the sum of 120*l.* in full satisfaction for a copy of Titian's great Venus by him made and delivered in at Whitehall for his Majesty's use and service."

This very interesting entry relates to the Titian now at Hampton Court,—the Titian of one of Walpole's many reminiscences: "While Queen Caroline dressed," Walpole writes, "prayers used to be read in an outward room, where hung a naked Venus. Mrs. Selwyn, bedchamber woman in waiting, was one day ordered to bid the chaplain, Dr. Madox (afterwards Bishop of Worcester) to begin the service. He said, archly, 'And a very proper altar-piece is here, madam.'"

The following entries (now first published) throw additional light on the character of his employment:—

"To Daniel Mittens picture maker upon the like warr't dated the viij°. of December 1625 for severall pictures of deverse noble personages done for his Majesty, cxxx^li.

10 July, 1627. Warr^t. to pay to Daniel Mittens, the king's painter, 100*l.*, for three pictures,—one of James IV. of Scotland, one of Mary the last queen of Scotland, and another of his Majesty's own royal person."

The "whereabouts" of the James IV. and of the Mary Queen of Scots are, I believe, unknown. Cannot David Laing, so well read in Scottish history, or all-accomplished Albert Way assist us in recovering them?

Two years later the following entry relates to Mytens, and to art in England:—

"By order dated 15 July, 1629. Unto Daniel Mittens, painter, as well 120*l.* for a great picture of his Majesty, and a picture of the Queen and the Dwarf; and 20*l.* in part of 95*l.* for a picture of Queen Mary and a small picture of Prince Henry, made by him for his Majesty."

The "great picture" of this interesting entry is the noble Mytens of the King, Queen, and Sir Jeffery Hudson, the Dwarf, the pillioned horse with dogs, now at Serlby Hall, in Nottinghamshire, the seat of Viscount Galway. Many will doubtless remember to have seen it at the famous Art Treasures Exhibition at Manchester in 1857.

In the earliest volume of the Lord Chamberlain's MS. Warrant Books, preserved in St. James's Palace, I found the following entry:—

"24th May, 1633. A warrant to Daniel Mittens to deliver to the Lord Deputy the picture he lately made of the King."

The Lord Deputy was the famous Earl of Strafford. This picture is now, I believe, at Lord Fitzwilliam's in Yorkshire.

The following letter from Mytens to Sir Dudley Carleton, has been imperfectly printed by Mr. Carpenter.* I owe my transcript to the courtesy of the accomplished Mrs. Everett Green. The original is in the keeping of the Master of the Rolls:—

"Laus Deo this 18th of August a° 1618.

Right Honnorable my varry good Lord.—My deutie first being remembred, wishinge your lordship muk healt and happynes. These feuwe lynes are to aduese you that I send you by this bearer that picteur or portrait of the Lord of Arundel and his lady to getthir in a small forme: it is rowled op in a smal case. I have donne my indeaure to perswaide his lorship to send your honnor those great picteures, butt he is not willinge to parte from them, by reason thye doe lycke his honnor so well that he wil kiepe them, and he willed me to make these in a smaller forme, who I trust your honnor wil accept and exsteme as a smal presente donne by by my Lord of Arundel, & for my paynes and keare, I have donne therein to the most of my pouwre. I leaue the judgment to your lordship's good discrecion.

I have binne at Harckney [Hackney?] to see wether I could fynde occasion to drawe the Prince's hignes picteur, but the prince beeinge a huntinge & suddainly to depart forthir in progres, I am returned for London, so that I must waight for a better oportunity at his retorne backe; and this is for the presente the effecte of my writtinge to your honnor the which it may please you to accept as from your pore & onworthie seruant, whoe wil ever bee reddie to showe my bounden dewtie when your honnor shall haue occasion to make tryall; in the meane while, I pray unto the Lord to preserue & kepe your honnor in healt & prosperitie to the ende of euerlasting glorie. Amen.

Your honnor euer to command,
Daniel Mytens."

Other printed papers relating to Mytens in England, which future editors of Walpole and picture historians of art in England would do well to refer to, may be found in Mr. Tierney's "Arundel," p. 495, and Mr. Sainsbury's "Rubens." The "new materials" of my communications are from MS. sources or from personal observation.

The late Mr. Frank Graves, of Pall Mall (with whom so much curious information has passed away) told me (Nov. 1853) that the portrait withdrawn at the Plumer Ward sale in Hertfordshire (in 1853) of the beheaded Duke of Hamilton, was so like Vandyck, that he should have called the picture a Vandyck had he not detected

* Harleian MS., No. 1718, fol. 85.

‡ *Ibid.*

§ *Ibid.*

* Carpenter's Vandyck, p. 176.

Mytens's name in a corner of the canvas. Where is this portrait?

The works by Mytens not already mentioned I will now attempt to catalogue:—

At Combe Abbey, full length of Charles I., standing.

At Hampton Court, full length of Charles Howard, Earl of Nottingham; the Armada Earl. Another at Greenwich.

Ditto, ditto, James Hamilton, second Marquis of Hamilton (died 1625), with his staff as Lord Steward. This is no doubt the picture which Charles had when Prince of Wales (Sainsbury's Rubens, p. 355).

Ditto, ditto, dated 1623, of Ludovic Stuart, Duke of Richmond and Lenox, buried 1623, with monument in Henry VII.'s Chapel.

Ditto, ditto, seated, of Edward Lord Zouch.

Ditto, ditto, standing, of Jeffrey Hudson, the dwarf.

At Kimbolton, ditto, standing, of Robert Rich, Earl of Warwick, inscribed "Ætatis sue 44 anno 1632, D. Mytens, fet."

At Drayton (formerly), ditto, standing, of Henry Rich, Earl of Holland, in a striped habit, with a walking-stick. Walpole calls it "very fine."

At Welbeck, ditto, of Sir Charles Cavendish, father of William Cavendish, Earl, Marquis, and Duke of Newcastle.

Ditto, ditto (in blue), of the mother of the same person.

Ditto, ditto (in black), of the first wife of the same person. Signed in gold letters,—"Ætatis suæ—anno 162[illegible], D. Mytens, fet."

At Knowle, ditto, Lionel Cranfield, Earl of Middlesex (d. 1645), with his white staff as Lord Tresurer. A small bell on the table has these letters, D.M.F. 1623.

At Euston, ditto, Villiers, first Duke of Buckingham, signed "D. Miitens f[t] a°. 1626."

At Grimsthorpe, ditto, Richard Weston, Earl of Portland. The same person that Vandyck painted. If the Mytens and Vandyck were hung together on the walls of the British Institution a real service would be rendered to portraiture and portrait painters.

At the Bodleian, half-length of John Selden. Extremely fine, and well preserved.

I have shown that Mytens held a house from the Crown in the parish of St. Martin's-in-the-fields, in London. I have now to give, and for the first time, the entries in the register of St. Martin's relating to Vandyck's immediate predecessor in reputation and practice. That Mytens was married, and that the Christian name of his wife was *Grace* are *additions* to the scanty materials we have of a great painter.

"1624-5, March 8. Martinius Mitten filius Danielis et Grace ux btiz[us] fuit.

1627, July 9. Elizabetha Mittens et Susanna daugh[rs] of Daniel and Grace Mittens bap[d].

1627-8, Feb. 1st. Suzanne Mitten filia Danielis et Gracie ux sepulta fuit in ecclesia.

1628, Aug. 1st. Suzanne Mitten filia Danieli et Gracie sep in eccla."

Mytens sleeps in the same grave with his predecessor and rival in reputation, Paul Vansomer, and in the same cemetery with his friend and neighbour, Sir Theodore Mayerne, the famous physician, whose fine portrait-tomb, coloured to the life, stands—shame to say—bricked in and buried in the vaults of Gibbs's noble church of St. Martin's-in-the-Fields. When they took, the other day, the coffin of *Surgeon* John Hunter from St. Martin's to St. Paul's, they might have taken the fine monument of *Physician* Sir Theodore Mayerne from buried darkness into decent daylight. Let the College of Physicians unearth and erect in their own college the characteristic monumental effigy of famous Sir Theodore Mayerne. The distance is nought from one side of Trafalgar-square to another.

PETER CUNNINGHAM.

THE SANITARY ARRANGEMENTS OF BUILDINGS IN HOT CLIMATES.

As I only receive your invaluable periodical monthly, and then two months after publication, I trust you will permit me to refer to one of your numerous articles on sanitary improvement, which must have, in the opinion of all sound men, much merit and great weight. The article I refer to is published in your issue of October 3rd, 1863, and is entitled "The Sanitary State of our Army in India;" and, as most of the article alludes to the defective drainage of barracks, I should just like to point out a few of the practical difficulties attendant on ventilation and drainage in a warm climate. I write from the new colony of Queensland, which is partly within the tropic of Capricorn, and where I have resided for seven years, during which time I have had to contend with some of the difficulties the architects, engineers, and builders of India are constantly beset with. Throughout the article quoted, the following remarks, being iterated and reiterated, would appear to contain the complete key to the cause of most of the disease and mortality in the Indian barracks:—"We very much doubt, however, whether much of what is called malaria does not simply mean foul air from station barracks and towns." Again, Sir Ronald Martin says, "It is evident that due regard has not been paid to the sanitary condition of the Indian barracks; *and that proper attention has not been paid to the surroundings.*" Again, in Dr. Bird's remarks, "In some cases where disease prevailed in the army, the greatest part of the outbreak was occasioned by the *overcrowding of the barracks and the filthy cesspools in the midst of them;*" and in quotations from Miss Nightingale's report the substance of the above is repeated. As to overcrowding, little can be said in extenuation except that the first cost of suitable buildings deterred the timid authorities from erecting them at once. It would not appear that the said authorities ever for one moment took the frightful cost of the "avoidable excess of mortality" set down in your article at 388,000*l.*, in the calculations of their building projects, into consideration. This, to my knowledge, is a frequent and most fatal oversight with governments, who seem to consider that as "sufficient to the day is the evil thereof," so also is the good thereof, and who "take no thought of the morrow." Hence the officers whose business it is to carry out the views of a governor or government is saddled with the whole blame for such incurable defects as we complained of. But, to turn to the deficient ventilation and drainage, it were hard to say which in a hot climate is most difficult to effect. And let me remark, that you, from your stand-point, in the cool, moist climate of the sea-girt isle, are scarcely fair judges of the requirements of such extreme climates. I would mention, in reference to this climate, which is similar to that of Rio Janeiro, how almost impossible it is to give ventilation by the vast variety of ventilation openings that have from time to time been invented and patented, at those times of the atmosphere when it is quite stagnant, as it is for days and nights together during the height of summer, when the thermometer stands at 90° in the shade, and during the long continuous rains which for days together descend in vertical lines, or sheets very often. You will admit at once, that, unless means are adopted for stirring up the lazy air, it must become foul and oppressive. In India the *punkah* is the means usually adopted to effect this; but in this country we are fast wedded to the "habits and customs of the English." There are insuperable difficulties in the way of introducing machines for artificial ventilation, either into Indian barracks or into buildings in far outlying British possessions. First, their cost is enormous; then, fuel is perhaps required where it is difficult to obtain: the heat of the climate is also against their use, as it would be futile to attempt the warming of buildings in most cases in such climates: the whole utility of the machinery would consequently consist in the agitation of the air, and of forcing it over large evaporating surfaces kept constantly wetted. The best system of general ventilation that can be obtained appears to be by building only single buildings, not in any case back to back, or honey-combed, perforating them with double-hung sash windows, and by thoroughly shielding them by wide, low verandahs or arcades; the rooms being lofty, and lighted and further ventilated by lunettes over the verandahs or arcades. And, above all, to give the air a clear passage through the buildings from side to side and from end to end, little artificial ventilation will be found requisite should such means be tried. It is admitted that buildings on this plan are more costly in the mere erection; but not, according to the showing of your article, in the end; by their saving thousands which are spent in sanitary measures and in the cure of disease.

Drainage is an impossibility without water-supply, and ten times more so in climates where the evaporation is two-thirds of the annual rainfall. If we suppose a barrack station on some elevated site, in India, or in such a country as Australia, running streams not being everywhere present, the supply of water will necessarily be from the rainfall, collected in tanks, perhaps rather limited in capacity, even for the daily consumption of the officers and men. A copious supply of pure water being obtained, drainage were a light consideration; and it would seem hopeless to attempt any system of drainage to barracks, or anywhere else, without it; so that the Indian reporters are about right when they consider *no drainage* a sufficient guarantee for health. If there be no sufficient water-supply, the latrines cannot be cleansed, except by hand labour; for if you attempt to drain them, if there be no rain, the drains get choked by the drought, and the evil is increased prodigiously. If drainage be attempted, there is probably no outfall except into an open ditch; and it will be apparent that this is only removing the sore spot without benefit. Or, say the drainage debouches into a tank, would there be much benefit in this way? Here, then, arises another question,—Are proper sites selected? It might happen that many of the evils complained of could be obviated by more attention to the site and its capabilities for getting properly supplied with water.

I trust it will appear from the above remarks that the greatest obstacle to efficient drainage in warm climates is the want of water, and where its want is greatly increased by the enormous amount of evaporation by heat, which causes the inhabitants to "waste not" that they "want not." And, further, even suppose you have water more abundantly than you require, if it have no natural fall, but require pumping for the purposes of draining, the difficulty of thorough drainage is still very great, and will, in such a case, be very expensive. It will often be found that any system requiring manual or machinery labour will get out of order and be a constant cause of outlay. In this new-made city of Brisbane, the inhabitants have been made fully alive to the necessity for drainage; but to attempt it has been found impossible, as the place, containing, by the census of the 1st of January, 1864, about 15,000 inhabitants, is precariously supplied by a reservoir holding not more than 400,000 gallons of brown water, alive with the most curious animalculæ, and thickened with "nearly all the chlorides, sulphates, nitrates, and carbonates of the pharmacopœia."

However, the Parliament voted a loan of 50,000*l.* to bring water to the city, and the commissioners have set about this highly important work; and it is expected, ere long, that the dam will be in building and the pipe-laying commenced. One thing, the promoters of the scheme never put forth at all during the whole agitation for the work, namely, the conjunction of a system of drainage. But this may be accounted for, that when they got the water-supply loan, another loan for drains to carry the waste-water off would necessarily follow.

I trust you will pardon the introduction of local matter into this letter, and that you will sometimes condescend to notice some of our doings in your journal, which, to us, in Australia, possesses a double value, where we have no institute (the British Institute have closed their stores to us, in the far South, as well as to you), no museums, no galleries, no fine old buildings to feast upon and copy. I suppose we ought to strike out something quite new in Australia in architectural art; but where is the man that dares attempt it? We are wedded to the habits and customs of the English, as before remarked.

Brisbane, Queensland. C. T.

THE HAGUE MUSEUM COMPETITION.

LAST autumn,—when the Dutch celebrated their national jubilee, in grateful commemoration of the erection of their country into a constitutional monarchy, under the dynasty of the present reigning house of Orange Nassau, fifty years ago (1813),—the King proposed to the States General a vote for the sum of a million florins for the purpose of erecting at the Hague a building to be called the "Museum of King William I.," in which should be placed the different collections of paintings, statuary, and other objects of art now distributed in the various museums of Holland. The vote being unanimously agreed to, a committee was appointed to take the preliminary steps, and home and foreign architects were invited to send in plans and estimates for the proposed building. The invitation having been responded to by twenty-one different architects, the committee

arranged a public exhibition of the plans received, which was held last week in Amsterdam, and an independent jury was appointed to examine the merits of the competitors, and award the prizes offered.

In conformity with the above, the jury have awarded the first prize of 1,500 florins to Professor Ludwig Lange and his son, Mr. Emil Lange, at Munich, for their plans with the motto, "*Wo die Bildung, ist auch die Kunst zu Hause;*" and the second premium of 300 florins to Mr. P. J. H. Cuypers, architect, at Roermond, with the motto, "*Toute forme, qui n'est pas indiquée par la structure doit être repoussée.*" Five others, bearing respectively the mottoes,—"*Concordia res parvæ crescunt,*" "*Rembrandt,*" "*Travailler c'est vivre,*" "*Streben ist Leben,*" and "*Orange boven,*" received honourable mention; but, as the names of their designers were sealed up, it has not transpired by whom they were sent in.

FIGURE DRAWING APPLIED TO ARCHITECTURE.*

The subject is one of considerable extent, requiring an acquaintance not only with books and theories, but with many buildings; and in this acquaintance, I regret to say, I am deficient, especially in not having seen many of the examples to which I shall refer. I wish to urge the practice of figure-drawing amongst architectural students. There are, it seems to me, three great reasons why this practice is valuable to an architect.

1st. Because it trains his eye to a knowledge and appreciation of good form and true proportion. 2nd. Because a really perfect building is never without figures, represented by means of painting, sculpture, or some other method. 3rd. Because, granting the latter reason, the architect should be able himself to indicate these figures on his designs, and in some instances to make full-sized drawings for them.

Firstly, then, a knowledge of the human figure is valuable, if not necessary, to the architect, because any one who studies from the life is almost sure to acquire what is called a "correct eye;" and this he will gain more by drawing the human figure than if he made plants or even animals his study; for, in his representation of these, he would not be so readily sensible of his slight faults as he would be in copying the human form,—the most perfect of all created forms,—with the appearance of which he is so intimately acquainted, and in which the slightest deformity is so readily appreciated, although men and women do not go about *in puris naturalibus*. And a complete mastery over the drawing of the human figure not only gives a man facility in drawing difficult details, such as he meets with in every subtle curve and delicately-pronounced projection; but the accomplishment of an entire figure, well balanced and proportioned in all its parts, will have afforded a sound training to his eye, and will also make him sensible of a feeling much akin to that which he would have in completing a satisfactory and pleasing design for a building. Arguing conversely, then, a man who can readily shape a design for a building into pleasing proportions will probably have a fair knowledge of drawing the human figure. Architects of past times have proved this fact; and we of the present day need no better proof of it than can be found in the drawings here exhibited.

I said that no really perfect building is without figures represented by painting or sculpture. These are Mr. Fergusson's words; and we have only to look through the pages of his "Handbook" to see the truth of this statement borne out by the buildings mentioned in it; though, of course, we are not supposed to believe that any of them are "really perfect." The Buddhist builders encrusted their topes with sculpture, and adorned their rock-cut caves with frescoes. Persians, Assyrians, and Egyptians laid on their temples imagery that only enhances their beauty and grandeur, but hands down to us the means of understanding their religion and history, and of introducing us to their habits and manners of living. The Greeks applied the very best sculpture to the very best architecture. The Romans, indeed, do not appear to have used sculpture to so great an extent in their temples; but there is a good deal to be found on their triumphal arches; and in Pompeii the walls of the houses were covered with exquisite paintings. Rude bas-reliefs adorn the walls of Mexican temples; in fact, turn where we will, we find that the pre-Christian builders produced the semblance of their gods, or recorded the glorification of their kings and the exploits of their warriors by means of the chisel and the brush. The religion of the Jews and Saracens imposed two notable exceptions on this almost universal rule: with both of these people the fear of idolatry forbade the representation of figures on their temples.

Christian art furnishes us with examples of figures applied to buildings in many and various ways: at first sparingly, as by a people whose enemies—enemies in religion—so vastly outnumbered their friends that they had to seek refuge in catacombs and other humble places for the exercise of their religious offices, and with whom the portraiture of a sacred figure would have been a doom of death. As they gained in strength and numbers they overlaid their tombs and temples with holy emblems, dear to themselves and fraught with meaning, and here and there with scenes from the Bible, simply put forth; and when the imperial religion and theirs became one, long lines of stately figures adorned the sides, while grand and simple pictures of Christ and his saints looked down from the vaulted ends of their great basilicas. Then, as time rolled on, and while mosaics and paintings were teaching their awful lessons on the inner walls, the axe and chisel had not been left unused; but, guided by hands of sculptors, as yet untutored, have given to lifeless stone shapes that present bright hopes of redemption or of solemn warning, from over the doorway, to those who entered the church. These sculptures spread and spread, until at length, in the thirteenth and fourteenth centuries, they had invaded every available space; and told not only Bible stories, but a great many other stories too; and were, moreover, the cyclopædias to which men turned for information on almost every subject. And now the tide of Mediæval art had ebbed; and though the painting and sculpture of the fifteenth century, sharing the delicacy of the prevailing architecture, present to us many examples which put our modern efforts to shame, yet living art was feebly awaiting the waves of the Renaissance, which came with the returning tide, and at last engulphed all the feelings, forms, and fashions of the Middle Ages.

In England, the odd little figures that the carvers of the Elizabethan age indulged themselves in applying to their architecture and furniture, do not seem to have had any high aim; and, worse than this, figures were frequently used, both here and abroad, as structural supports; as, for instance, in the case of bedposts, or bearing the canopy of a monument—a fatal error from the true principles of architecture. In other countries, monumental sculpture attained great perfection; and in Belgium and Germany the fireplaces of baronial halls were chosen as vehicles for the display of statues and groups—often of a religious character—that are not wanting in grandeur. Tapestry had come into more frequent use, and supplied the place of frescoes, which had now almost gone out of fashion. During the latter half of the sixteenth century architects began to perch rows of figures along the tops of many buildings, a practice that prevailed chiefly in Italy, and was more or less common in all European countries.

With the revival of the Classic styles came men of whose names our country especially will always be proud; but still they were revivalists, and therefore, to a certain extent, copyists, and that of styles which, however beautiful in themselves and in their proper homes, are alien to the natural feelings of Englishmen; and so little influence have their works had in forming anything like a national school of sculpture, that we may pass a score of doors in succession, from over each of which the same plaster face, in the shape of a key-stone, grins down upon us; while poor "Venus robing," and "Diana going to bath," have to serve as the presiding goddesses of general outfitters' shops,—I beg pardon, "emporiums," assembly-rooms, mechanics' institutions, and noted eel-pie houses.

I have, as yet, said nothing of the painting of figure subjects employed to decorate architecture since the Renaissance, because, with comparatively few exceptions, a universal love for whitewashed walls banished them from buildings of all kinds; at all events, in the Northern countries of Europe. This absence is redeemed, to a certain extent, in the churches, by the much-admired Cinque-cento glass, beautiful in itself, and giving relief to the monotonous colour of the walls by casting its stained light. The mosaics and frescoes of the Middle Ages found a substitute in the easel-pictures which form the altar-pieces of this period; but, though many of them are the most perfect embodiments of the grandest conceptions that ever entered the souls of men, yet their very portability is a humiliation by which no mosaic or fresco would bemean itself. However, as it is to this very attribute that we owe the possession of many of the finest pictures in our own National Gallery, and in all great collections, Raffaelle, Perugino, and Murillo, may perhaps be excused for painting easel-pictures.

The Mediæval revival has not as yet produced much for us to be proud of in the way of painting and sculpture, although, indeed, long strides are being made in the right direction every day; but we still see a vast amount of mawkish stained glass and sleepy sculpture executed, and I hope to be able to point out the cause of this in a future part of my paper.

But apart from all precedent for the employment of figures as an embellishment to architecture, there surely can be nothing fitter for the purpose than that which is in itself both the most beautiful form of decoration that can be conceived, and is also, when properly employed, the most wholesome way of embuing that which it decorates with an interest and history of its own. The puritans, who treated as many sacred paintings and statues as they could get at in such a very disagreeable manner, have made us Englishmen peculiarly sensible, negatively, of the truth of this. What appeals to us more strongly than the vacant stare of a statueless altar-screen? or what is more chilling than the vast expanse of whitewashed walls, once warm with painting, that have been roughly hacked by Roundheads, and then physicked by successive churchwardens with their universal cure for a dirty church? There can, I think, be no objection, even in the minds of those who hold the most Low Church views, to the adornment of their places of worship with subjects simply and directly taken from the Bible,—subjects which the unlearned can gaze upon with reverence, and the educated reflect upon with devotion; while children's attentions will be fixed, and their tongues and fingers kept quiet as they muse on "that bald old man with the keys." And, again, in the field afforded by our secular buildings for the frequent display of representation of the human figure, its absence is rather a want acutely felt than its presence a thing to be urged. This is essentially an age of copyism, and in lieu of distinctive groups, or even heads, attached to various buildings to give one a notion of their object or character, we find, if there is any thing at all, a repetition of the same thing, such as I referred to above, applied to hundreds of different buildings having no object or character in common. The collection of various specimens of the plastic art that may be seen in the Marylebone-road must have had great influence on the "national sculpture" of the nineteenth century; for we may see copies of the meaningless objects there exhibited now and then patched on to houses, by a liberal builder, in a promiscuous kind of way; as when Pallas Athene forms the keystone of the doorway, but by no means the key to the occupation of the inhabitant of a small private house; or, as in the case of a pair of guardian animals bearing somewhat canine proportions; or of a couple of fierce eagles, with outspread wings, flanking the entrance to a suburban villa. We might perhaps imagine that such houses were inhabited by gentlemen with a taste for natural history, were we not inured to the sight of these plaster botches, which do not retain half the character that animated the originals from which some of them have been perverted.

This is also an age of easel-pictures, so that when we are inside the houses we do not fare much better if we are in search of decorative painting. Of course, in the case of private dwellings, especially in large towns, this want is chiefly attributable to the present method of leasing and letting houses; but there can be nothing, except expense, which is often incurred in other less worthy ways, to prevent our public buildings from having their stories and histories told by painting and sculpture. The great fresco in Lincoln's Inn Hall, and the statues in the Museum at Oxford, show us what can be done in this way.

Having urged a general use of figures, it may be well now to see in what way this can be carried out; and if we go back to ancient examples, we find that figures are used either as conspicuous objects, or at what I may call "sur-

* By Mr. Edward John Tarver.

prises." Firstly, when the figures are intended to convey to us some deep meaning, or to tell some soul-stirring history, they are so placed as to catch our eye as soon as the general proportions of the entire building have satisfied and delighted us, as they must have done from their frames along the frieze of the Parthenon, binding its brows like a jewelled tiara. Or they are confined chiefly to one façade, as at Wells Cathedral, when it was whole, covering it with one connected Bible history, that held one's attention, as it crept on and up from niche to niche, until it reached the crowning figures of Christ and His angels. Or again, as at Rheims, where one, I should think, might revel in the riches of sculpture spread over its portals, until the interest of one's mind had worn out the strength of one's eyes in following out the lines and lines of angels, divines, and saints. Or, if sculpture was sparingly laid on to a building, it was placed in, at all events, the most telling position, as on the corner-stones of the Ducal Palace at Venice, or on a well-chosen spot on the front of a house, or else in the form of statues flanking the entrance-door: at any rate, when it was meant to be conspicuous, it *was* conspicuous. What I mean by figures used as "surprises," are those which we come across every now and then in a row of gargoyles; or which, in the shape of heads, suddenly flash upon us from amongst the scrolls and contortions of an illumination, or peep out of a foliated cap, or bud amongst the leaves and tendrils of a piece of intricate ironwork. Great care should be taken not to confound these two methods of employing figures; and, to show how this mistake may be made, I will adduce, as an instance, the sculpture on the Houses of Parliament, where the statues of our kings—careful works of art in themselves, and of considerable value,—are so lost amongst the windows and wall tracery, that it is some time before we see them all, and a long while before we appreciate them: in fact, to use the term I have chosen, many of them come upon us as "surprises."

And now that we have seen the propriety of applying figures to architecture, and the way in which they may be used, it seems almost strange that they do not form as usual a feature in our buildings as they did in those of other ages. And there is very little doubt that they would do so, were it not for two very great difficulties that beset us. Firstly, our costume; and, secondly, the want of ability in figure drawing amongst architects.

Firstly, our costume. This is so utterly unpicturesque, both in form and colour, that it imposes an almost fatal barrier against all attempts at historical painting and sculpture; and all decorative art should be historical, if only for the sake of the antiquaries and historians of some thousand years hence, who will be sadly puzzled to make head or tail of it as it exists at present, to say nothing of the architecture of which it forms a part. The painters, indeed, have a slight advantage over the sculptors, as they can heighten the colour a little, and make up a presentable effect with accessories. Indeed, amongst the lower classes, a painter may find plenty of subjects in which deep rich colours, well toned down with dirt, and picturesque, though not always pleasant forms, give him good materials for a picture; while grotesques, which should be occasionally but cautiously employed, find fit subjects in the extravagant dances of Ethiopian serenaders. But the case is far different with sculptors; for there is no more delicate test of the form of anything than rendering it in colourless sculpture; and what *can* a sculptor make of a crinoline, a chimney-pot hat, or a pair of trowsers? Now, if a Mediævalist had to carve a single figure or group, even such a one as represented any common incident of life, the costume of the day lent itself most fitly to his purpose; and, if he had the necessary talent, his work always resulted in an artistic production; but a similar subject, treated in the costume of the present day, would baffle the efforts of any man; and the result is, that sculptors either go back to former times for their subjects, or dress our contemporaries in the garbs of our ancestors, to say nothing of Roman togas; or else they have to spoil what might otherwise have been a work of art, by clothing their figures in the hideous protections from the weather which we submit to wear.

It would probably be futile for any but the most powerful European potentates to work any sudden or material change in modern costume. Such an attempt has lately been made by a body of artists, and the subject has both been treated seriously, and, still oftener, ridiculed, in many public papers and serials, particularly in *Punch*; and some of the slight improvements that have arisen may be due to these causes; but there is very much yet to be done before the walls of a palace can receive pictures of its pageants, or the doorway of a shop bear a decent group of sculpture showing the history of the goods sold within. The following seem to be the chief difficulties thrown in the way of the sculptor. We will follow the rule of "ladies first."

No one will deny that our lovely Englishwomen would look well in any costume; but it by no means follows that any costume looks well on them; and, to begin at the head, a bonnet is, when we consider it from all points of view, a very ill-shapen thing. As seen from the front, it certainly seems to form a frame calculated to set off a handsome face to great advantage; but it is a question whether the beauty of the picture is not the key to our admiration of the frame; at all events, the same head invariably looks better in a well-shaped hat; and then how utterly does that starched projection, misnamed a "curtain," rebel against true principles of beauty! especially when compared with the beautiful hoods that hung in graceful folds around the heads of our Mediæval ancestresses. The bodices of modern dresses are indeed, in most instances, worthy of the bodies they inclose, except those worn in full evening dress, which present an unartistic form in that straight line drawn horizontally from shoulder to shoulder; a low dress, cut in what is called the Venetian manner, is infinitely better. But now we come to the grand source of difficulty, the true "sculptor's puzzle," to which women cling as obstinately as it refuses to cling to them. It is reported that it has been decided to erect a statue of the Empress of the French, with crinoline complete. It is just possible that a figure thus encircled may be well treated by a clever artist; but even this would seem doubtful, and a group containing two or three of these overspread cages would be ridiculous. We must not, I suppose, find fault with the charming little boots which give the finishing touch to a well-dressed woman's appearance; but we must look upon the foot as a part of the body that has undergone a great change in form, which form is now quite a creation of man's, and utterly different from the natural one that it retained until about the time of the Restoration.

We will now look at the costume worn by men. A general absence of creases in all his clothes seems to be the chief object aimed at by a well-dressed man,—and this stiffness is, no doubt, the cause of the want of colour in our clothes; for anything which hangs in folds can bear a much stronger colour than that which is stiff. Nature shows us this principle in the crumpled petals of the scarlet poppy.

The parts which call most urgently for more artistic clothing are the head, the neck, and the ankles. No one can possibly say a word in favour of the chimney-pot hat, except as a safeguard in riding. Its stiffness, its sheen, its want of comfort when on, the difficulty of disposing of it when off, and, above all, its hideous shape, are objections which an eye for the beautiful, combined with a love for comfort, ought to be able to overthrow, but which are patiently borne by the spirit of fashion. In the next place, collars, both of coat and shirt, are not yet what they should be; the large overlapping layers of cloth that used to creep up men's necks are not yet fully abandoned. If the neck is to rise well out of the shoulders, there should be either no projecting collar at all, or else a *bonâ fide* one, standing well away from the neck, and setting off the head to great advantage, such as those worn in the fifteenth century, or by the common sailors of the present day. Lastly, the ankles of a gentleman in trousers look very badly in sculpture, stained glass, or on a monumental brass. It would seem that the ankles ought either to be tightly clothed, or else entirely concealed behind a loose robe hanging in folds: the latter expedient would be inconvenient; but the former one, which has been started in the form of knickerbockers and gaiters, or thick stockings, might well find more general favour. The only sculpturable costumes of the present day are to be found amongst the lower classes of life. Perhaps the best of all is that of a burly brewer's drayman, with his scarlet Phrygian cap, his thick padded coat, leathern apron, and rough gaiters.

Having now treated of the obstacle which our costume imposes on the representation of figures on our buildings, I come to the second difficulty; namely, the general want of a power of figure-drawing amongst architects; and this brings me back to the last of the three objects with which I started:—"That the architect should be able himself to indicate figures upon his designs, and in some instances to make full-sized drawings for them."

The ignorance of figure-drawing amongst artist workmen is, of course, another great want of the present day; but this subject has been so thoroughly treated of by Mr. Burges, in his Cantor Lectures, that there is nothing left for me to say; and, moreover, it has no immediate connexion with the object of this paper. I have to deal with this ignorance amongst ourselves.

In the course of a conversation that I had with Mr. Burges about figure-drawing, he said that an architect should be able to provide small sketches of all the painting and sculpture required in the building that he has designed; and might, in some instances, prepare full-sized cartoons of the subjects; but that he should be careful not to do this too often, as he would run the risk of becoming a mere cartooner, and of neglecting the wood and stone to which his art should be especially applied. I do not think that many of us will be likely to need the last portion of his advice just yet; but I trust that I have said enough, in the course of this paper, to satisfy you of the urgent necessity of our attending to the first portion of it. The drawings contributed to the Class of Design are the strongest proof that we can have of our backwardness in figure-drawing: as a rule, they either contain no figure at all; or, if sculpture or painting be shown in them, it is generally of the very mildest description.

No time should be lost in extricating ourselves from this mire of ignorance on the most vital part of our artistic education, and we should take immediate steps in joining or forming a life school. It will not be irrelevant here to say a few words about the scheme suggested by Mr. Scott, in the admirable paper that he was good enough to read before us the other evening. It is my firm conviction that the classes that he recommended should be held in the day time. Such a proposal would, no doubt, meet with strong opposition amongst architects who have clever pupils in their offices, and who expect of these the work that more properly belongs to paid assistants; but it would seem to me to be expecting too much of a pupil that he should work decently during the day, and acquire in the evenings that which is of course intended to be the soundest part of his professional education. This course would be injudicious for one reason, if for no other. Many students whose eyesight is not very strong would run great risk of impairing it by continual evening work. Of course, these classes, if held in the day time, would be out of the reach of most of us who are out of our articles. The answer that I make to this objection is, that gentlemen now in articles would owe Mr. Scott deep thanks for his excellent suggestions; and that assistants, to whom time is money, should be content to earn as high a reputation as Mr. Scott himself, who probably had not, in his time, more advantages than they have.

But to return to my proper subject. Mr. Burges strongly recommended the formation of a life school amongst us, and that it should be attended every evening of the week; and that, above all, we should have a competent teacher. I have accordingly corresponded with an artist whom he recommended, who would attend the class for 10s. an evening. As nothing has been definitely settled, I would rather not mention this gentleman's name. It appears to me that it would be impossible to get a sufficient number of students together to warrant the formation of a class for every evening of the week; but such a class might well meet thrice or even twice a week, in which case the attendance of the presiding artist on one of those evenings would be sufficient.

I have prepared a list of the probable expenses of a life school, and the amount of subscription that each student would have to pay.

* * * * *

And when, in the course of time, architectural students have become as familiar with figure-drawing as they are now with the ordinary routine of an office, we may confidently hope for an architecture worthy of the nineteenth century; and we may even cease from fighting battles of styles, for the champions of each of the armies will be so satisfied with the designs of their enemies that they will envy rather than criticise

them, and seek a general reconciliation; and so, by the strength of union, the architecture of the nineteenth may equal and perhaps put to shame that of the thirteenth century.

SHAKSPEARE.

The three hundredth birth-day of "the one and only Shakspeare," has been celebrated, notwithstanding mistakes, in a very remarkable manner all over the country and out of the country; and we do not doubt we shall yet see erected in London a permanent monument to the poet, expressing the national feeling, and at the same time adorning the metropolis. The ceremony of planting a tree at the foot of Primrose Hill brought together an immense number of persons, and produced a picture which, if not quite "one of the grandest spectacles that ever met human eye," as Mr. Phelps termed it, was nevertheless a very wonderful sight. Primrose Hill was covered from bottom to top with people looking down upon the acting group, and the effect was certainly remarkable.——At the Crystal Palace other thousands had assembled, actuated by a similar feeling.——The London actors had supped together the previous night to the number of 400, and so ushered in the morn, Mr. Webster presiding and Mr. Buckstone acting as vice-president.——At Stratford-on-Avon, the banquet presided over by Lord Carlisle was successful in every respect. The speech of the chairman and that of Mr. Creswick, the tragedian, will be long remembered by those who heard them. "I heartily approve," said Lord Carlisle, "the idea of this festival. I think the leading events, epochs, persons of this our earth require their occasional commemoration. Life is stagnant enough—men and women are commonplace enough—to avoid the risk of such disturbances cropping up too frequently. Least of all can the nation which boasts of Shakspeare fear to misplace her homage." Germany sent an excellent address and good supporters. Russia has since co-operated. One telegram from Moscow said:—

"The Imperial University of Moscow, recognising the great influence of Shakspeare on the Russian literature and stage, this day publicly celebrates the three hundredth anniversary of the birth of that great genius, equally dear to the whole civilized world; and hereby congratulates his countrymen on the occasion."

The celebration has since proceeded successfully; but we still think it was an error to fix the prices of admission to the Pavilion so high: more money would have been taken with smaller charges.—— The Mayor of Liverpool, Mr. Mozley, has gained golden opinions by the share he has taken in the matter. Besides a ball and a *soirée* he threw open the theatres and other places of amusement where Shakspearian entertainments were provided. The appreciation of this liberality was shown by the enthusiastic ovations which the mayor received on visiting the theatres.——In Manchester there have been illustrative readings and musical illustrations. All rendered their services gratuitously; and the gross proceeds of the entertainment are to be given in aid of the endowment of a Shakspeare school for the education of poor actors' children in connexion with the Royal Dramatic College. The Freemasons of Manchester also celebrated the tercentenary by the consecration of two lodges—the Shakspeare and the Robert Burns.——The series of celebrations in Birmingham was opened by a *soirée*, given by the Shakspeare Club, in the Assembly-rooms at the Royal Hotel. The large room had been decorated under the superintendence of Professor Chamberlain. In front of the orchestra was a proscenium; while at the back, and in the centre, was a copy of the Stratford bust of Shakspeare, under a decorated canopy of the period. The bust was lighted by a coronal of gas jets from above, and stood out well from the red drapery in the background. On each side of the canopy was a large picture contributed by Mr. Leitch: the one on the left represented the house in which the poet was born, and that on the right the church at Stratford-on-Avon, where his remains now rest. On the wall at the bottom of the room was a large sketch, in colours, by Mr. Sebastian Evans, of the principal characters in the plays of Shakspeare. ——At Leeds the dramatic commemoration in the town-hall was eminently successful.——The inhabitants of Birkenhead celebrated the event in a very spirited and commendable manner. A committee, comprising all the influential men of the district, had the management of affairs; and have, further, decided to establish a fund for the purpose of giving a yearly prize for competition amongst the inhabitants of the borough, the subjects to be Shakspearian. Ten thousand working men planted an oak, and an able address was delivered. ——At Ipswich there were considerable doings, and Mr. T. S. Gowing, as usual, wrote prologues and epilogues, and "verses" for the entertainments, and planted a tree (a silver cedar), in the Public Arboretum. On the latter occasion a space was railed off for children, and more than 600 of them threw their tiny spadefuls of earth on to the roots of the tree.——The last number of "The Autographic Mirror" is a Shakspeare memorial. It gives, by means of photo-lithography, Droeshout's print of the bard; a copy of his will, fac-similes of all the Shakspearian autographs, and of several letters and documents cognate.——We will end our memoranda with one out of half a dozen poetical contributions forwarded, reminding our obliging correspondents, at the same time, that poetry is not our specialty, and that it is only homœopathically we can indulge in such delights:—

Hark! in the springtime of the year arises
Nature's sweet music in a roundelay,
From bush, and brake, and dell, and craggy height,
The songs of thanks, and freedom, and delight.
Methought the nation was astir to pay
Its adulation unto one it prizes;
And, mingling with the music of the trees,
Echoes roll'd solemnly from loud acclaim,
And Shakspeare lived at mention of his name!
Did ever man, I thought, work with such ease
To gain his glory and immortal fame?
No, no; it cannot be; he must have been a god!
But, as I spoke, a lark sprang from a sod,
And, warbling, whirl'd himself into the very sky!

C. G. S.

COMPETITIONS.

Alexandra Park.—The premiums have been awarded as follows:—First premium, 100*l.* Messrs. Marsh Nelson & Innes, and Mr. William Harvey (joint design). Second premium, 50*l.* Mr. J. A. Bone and Messrs. Wimble & Taylor (joint design). Third premium, 25*l.* Mr. A. McKenzie.

Drinking Fountain for Gateshead.—The Hawks Memorial Drinking Fountain committee at Gateshead have awarded the prizes for the best and second-best designs of a memorial to the late Alderman Geo. Hawks, J.P. The design selected for the first prize was one bearing the motto of "*Quod face volde face*," and the second prize was awarded to a design bearing no motto. On the letters being opened it was found that Messrs. R. Craggs & Sons, marble masons, Gateshead, were the authors of the best; and Mr. J. Johnstone, of Newcastle, the second best. The successful design consists of a statue of the deceased gentleman on a plain pedestal, with detached drinking-fountain on either side. The erection will be proceeded with as soon as the necessary contracts can be entered into.

ACCIDENTS.

The Langholm Branch of the Border Union Railway, which was recently opened for passenger traffic, has been inaugurated by a rather inauspicious and unfortunate occurrence. One of the bridges on the line near to Langholm gave way about the foundation and fell to the ground. It is said that the bridge was built in or near to the site of an old coal-pit or quarry, and that the foundation did not rest upon a sufficiently solid basis.——At Sandown another railway arch has become a ruinous heap. The report runs that the work in the neighbourhood of Hide had made great progress, and that an arch had been completed. It was found advisable to test the strength of the structure by driving a heavy waggon over it. The attempt was made, but when the pressure reached the crown the whole mass gave way, precipitating everything thereon into the space beneath. The men employed in the operation, being prepared for possible accident, avoided the fall, and no further damage ensued.——The floor of the Wesleyan schoolroom at Altarnam, near Launceston, gave way lately, while a temperance meeting was being held, and fully 100 persons fell through the floor into some stables below, a depth of about 10 feet. No one suffered any worse injury than slight bruises. It was found that the beams had rotted away where they were inserted into the wall.——A building lately used as a storehouse, attached to a brewery in Croft-street, Newcastle, fell lately into the main street. The site was formerly Mr. Grainger's work-yard; and on his requiring greater accommodation it was roofed, and a gateway formed, the main walls being little more than a foot thick.

THE ROYAL ACADEMY EXHIBITION.

The private view takes place on this Friday: the dinner will be given on Saturday, and on Monday the doors will be opened to the public. We are given to understand that the collection is a very fine one. Numbers of good pictures remain unhung from sheer want of wall-space. In respect of architecture, probably so large a number of really good *accepted* drawings, remaining unhung on that ground alone, has never before been sent back. The Professor of Architecture, we have reason to believe, has found this necessity for rejection very painful.

THE FLEMISH AND FRENCH GALLERY.

Mr. Gambart has this year formed a most interesting collection of works by artists of the French and Flemish schools, 186 in number. It has received, as it deserved, full notice from the daily press, and will doubtless attract a large number of visitors. A perfect picture by Gérome, "Scene on the Nile off Thebes" (two black rowers conveying a prisoner); two fine pictures by Gallait ("Vargas taking the Oath" and "The Sentence of Death read to the Counts of Egmont and Horne"); three works by Henry Leys (especially "Going to Church on New Year's Day"); and "Saying Grace," by Edouard Pierre Frère, are the gems of the collection, but there is scarcely a picture in it that will not give pleasure to a cultivated mind. Beyond those already named, we specially commend to attention Baugniet's "Innocence and Repentance" (in which David Roberts has co-operated); Israel's "Poor Widow's Removal;" Madame Jerichau's "Shipwrecked;" Laugee's "Dame School;" Plassan's "Scene from 'Le Bourgeois Gentilhomme;'" "The Amateurs," by Ruiperez; "A Glass of Lemonade," by Stevens; and Verboeckhoven's "Flemish Sheep." The gallery altogether is a treat.

MONUMENTAL.

The statue of Schiller, intended to be placed in front of the new Picture Gallery, now in course of erection at Hamburg, is announced to be in such an advanced state of forwardness that it will be ready by the next anniversary of the great poet's birthday (November 10th). The cost is calculated to be 16,000 Prussian dollars (about 2,300*l.*); but, as there is still a sum of 1,000*l.* wanting to cover the expenses, the Hamburg committee are canvassing their fellow-citizens and the public for voluntary contributions to make up the present deficiency.

A family monument to the late Countess Canning has just been completed by Mr. J. B. Philip, of Hans-place. The whole of the monument is of Sicilian marble, and is about 15 feet long, 9 feet wide, and 11 feet from the ground to the top of the cross. The destination of this work is Calcutta, to which place it will shortly be despatched.

THE RELATION OF ARCHITECTURE TO DAILY LIFE.

On this subject Mr. Ruskin lectured last week in Bradford. As reported in the Manchester papers, the lecturer said he had come, after a five years' absence from Yorkshire, not so much to deliver a lecture, as to utter to them a complaint. He uttered this complaint at Bradford now, because it was here that he first proposed a question which it appeared to him necessarily should be answered before any point of architectural interest could be determined upon for the manufacturing interest. They had not answered it; and he had not himself, by thinking over it, got any answer since. The question was this,—"What are you going to make of the architecture of the districts in which manufactures are prevalent?" It was five years since he put that question, and the interval, which he had passed for the most part abroad, had shown him more and more the necessity for answering that question speedily. The most beautiful features of the Continent, and especially of Switzerland, were on the point of being swept away by the progress of manufactures. The Swiss had caught from us the infection of money-making, but they had not caught our earnestness, honesty, and benevolence; and in that country there was nothing but a low money-making spirit, which stopped at nothing. He wished to ask what were they (the English people) going to bring the world to if they

PECKHAM WESLEYAN CHAPEL.—Mr. W. F. Poulton, Architect.

had it all their own way? He had come there in answer to an invitation to give them his opinion upon the style in which they were to build their new exchange. He could not speak to them in a healthy straightforward way about that. He did not care much about their Exchange, and that because they did not care, and knew perfectly well they did not. Let them look at the real circumstances of the case. They were going to spend 30,000*l.*—which to them collectively was nothing, not so much as the buying of a new coat to him—in the erection of an Exchange. But they thought they might as well have a right thing as a wrong thing for their money. They knew there were a great many odd styles of architecture. Dress was the exponent of daily life and character; and good architecture was the expression of national and social life, character, and taste. He wanted them to think what was the deep signification of the word "taste." No statement of his had been more frequently contradicted than this, that good taste was essentially a moral quality. Many of his antagonists said taste was one thing and morality another. Allow him to fortify his old dogma. Taste was not only a part, but an index, of morality: it was the only morality. Tell him what a man liked, and he would tell him what he was. The object of true education was not merely to make people moral, and to do the right thing, but to make them enjoy the right thing; not merely industrious, but loving industry; not merely to learn, but loving knowledge; not merely pure, but loving purity; not merely just, but hungering and thirsting after justice. What they liked determined what they were; and to teach taste was to form character. He had noticed in the new buildings which covered their hills that churches and schools were mixed, in large proportion, with their mills; and he noticed also (although there were some exceptions) that the churches and schools were almost always Gothic, whilst the mills were never Gothic. What was the meaning of this? Was it that they were thinking of changing their style of architecture back to the Gothic, and were treating the churches experimentally, thinking that it did not matter what mistakes they made in a church? Or was it that they were beginning to feel that Gothic was permanently more beautiful than any other style? He believed they would find that, at the root of the matter, it signified neither more nor less than that they had in some degree separated their religion from their lives.

NEW WESLEYAN CHAPEL, PECKHAM.

The above building is about to be erected in the Queen's-road, Peckham, on a site at the junction with the Harders-road. The Early Decorated style has been adopted in the design. The principal feature is a tower and spire at the angle 120 feet high.

In addition to entrances in the tower, and a porch abutting on the Harders-road, two separate exits are to be provided for the galleries, as well as an additional exit in the rear of the chapel. The chapel will be 81 feet long in the clear (exclusive of an apse, which will be 11 feet 6 inches in addition), and 43 feet 8 inches wide. A vestry is provided at the side of the apse. The chapel is to be ceiled below the roof-level in a slightly-arched form; and the ceiling will be divided into panels throughout. Height of chapel internally, in the centre, to be 37 feet; and at the plates 24 feet. Iron tie-rods will connect the roof-plates, and the gas pendant-pipes will intersect the rods at three points in each truss, with ornamental junctions. The walls and ceiling-panels are to be relieved with ornamental distemper work. The materials of construction are to be Kentish rag stone, and Bathstone dressings. Mr. Sawyer, of Dulwich, is the contractor for the building, at the sum of 4,427*l.*; and Mr. W. F. Poulton, of Reading, is the architect.

NEW WAREHOUSE, SOUTHWARK BRIDGE ROAD.

The engraving in our present number illustrates the premises lately erected on the site of Nos. 20, 21, 22, 23, and 24, Southwark Bridge-road, for Messrs. Pocock, Bros., leather merchants. The building is five stories in height, including the basement, having a frontage of 30 feet, and a depth of 36 feet. The style adopted is of an Italian Romanesque character: arcaded windows, with single and coupled columns, are, however, frequently met with in the provinces of the south of France, in buildings of the thirteenth century.

The front is faced with red bricks set in black mortar. The cornice, strings, columns, and hood moulds are of Portland stone. A band of black bricks is introduced under each string: a band of black bricks also marks the arches of the third-floor windows. All the windows in front are glazed with British plate glass, and the frames and sashes are painted bronze-green. The arcade on each side of the steps is surmounted with semicircular stained deal ribs with perforated spandrels and a deal cornice. The entrance-doors and transome over are of oak, French polished. The landings are laid with Maw's tiles. The gates at the bottom of the steps are of wrought iron. At each side of the entrance are circular stone panels, in the centre of which are the monograms of the firm and the date of the year, and pieces of serpentine marble are let into the margins.

The back front is faced with picked stocks, having the arrangement of the openings similar to that in front, brick piers taking the places of the columns in front. The strings and caps are of Beart's patent moulded white bricks; the arches gauged yellow malms. There are raking windows to the staircases at the back.

The floors are supported on wooden girders, resting on cast-iron columns placed longitudinally down the centre of the warehouse.

Natural foliage has been introduced in the caps of the columns to the windows on the ground and first floors, in combination with such British ferns as the *Polypodium vulgare* and *Scolopendrium vulgare*.

The counting-house is on the ground-floor: it is enclosed with a glazed deal screen.

A wing has been added at the back of the warehouse, four stories high, 81 feet long and 20 feet deep, having windows of a similar character to those of the back front, which it adjoins.

The architect is Mr. Henry Jarvis, of Trinity-square, Southwark: the builder is Mr. Henshaw, of Sun-street, Bishopsgate. The carving has been executed by Mr. Plows, of St. Margaret's-place, Westminster. The total cost of the warehouse will be about 4,800*l.*; the cost of the wing about 1,500*l.*, exclusive of trade fittings.

NEW WAREHOUSES, SOUTHWARK BRIDGE ROAD, LONDON.—Mr. Henry Jarvis, Architect.

INTRAMURAL BURIAL-PLACES AND THEIR DESECRATION.

IF the desecration of the resting-places of the dead in the metropolis, either carried out or attempted, could have been anticipated, there is no doubt that measures would have been taken by the legislature to have prevented the disgraceful proceedings which in several instances have taken place. Years since we described the overcrowded condition of the burial-ground attached to the Tottenham-court-road chapel, in which the celebrated Whitfield formerly preached. Year after year, when it was thought impossible to bury more dead, hundreds of human bodies were stored away in this burial-place, until some were only covered by a few inches of surface earth. Here, as at Bunhill-fields, enormous sums must have been paid for interments. There were numerous grave and tomb stones, some of which had been erected at a considerable expense. A few years ago, as our readers know, a ruthless raid was made by the trustees of Whitfield's chapel upon the stones; and in a very short time these memorials were removed from their places, and arranged in heaps, ready to be carried away. By means of the press this desecration was brought before the notice of the public, and the gravestones were laid flat over the surface of the ground. Persons who had family graves there instituted legal proceedings against the trustees for the removal of the tombstones, and it was ordered that they should be restored to their original position. Since then, until recently, matters have been kept quiet, and but little mention of the sale of this property has been made. It seems, however, that the temporary lull is no longer to be continued; that the trustees have sold the ground to persons who, if not prevented, will soon cart away the remains of the dead, and build upon the site.

Some time ago Mr. H. O. Nodes waited on Mr. Tyrwhitt, at Marlborough Police Court, and said he had to ask his worship for summonses against a master builder named Richards, and his foreman, named Wilkes, under the Malicious Injuries to Property Act (24 & 25 Vic., cap. 97, sec. 52), for unlawfully removing and injuring a gravestone in the Tottenham-court-road chapel and burial-ground, his property, and thereby destroying all identity of a family vault, also his property. Mr. Nodes stated that, but for the restrictions of the conditions of sale in 1862, as to private rights, the property, which sold for 4,500*l.*, would have fetched at least 15,000*l.*, it being freehold and in a most valuable locality. The persons Mr. Nodes applied for summonses against stated that they were acting under the orders of Mr. Tarring, architect, and a committee; and tauntingly laughed at anything like remonstrance, and refused to restore the gravestones to their original site; stating that all the stones were the property of their employers, the purchasers. Mr. Nodes mentioned that his parents were interred in the grave, and that it had cost something like 30*l.* A summons was granted, which has since been dismissed; but we trust that Mr. Nodes will persevere in this matter, and prevent similar acts of gross injustice from being done.

Now that the unhealthy and evil practice of intramural interment has been put a stop to in the metropolis, except in a few rare instances, it is to be regretted, we may here observe, that it still continues in force within the precincts of Newgate. Not long since the bodies of five pirates, it will be remembered, were buried after their execution, under the stones of a passage in the prison; and such has been the practice for many years past. We do not know the number of those executed who have been buried here during the last quarter of a century, but it is considerable. The population of this prison, not prisoners alone, but also warders and attendants, is not small; and especial care should be taken of the health of those who are pent up within the jail walls for many hours together.

In the olden times monks buried the dead of their brotherhoods in their cloisters, and we know the fatal results which often followed. In the instance referred to, the use of chemicals *may* prevent some of the mischief, but probably not entirely; and besides, there is no reason why this prison should be allowed to continue an unwholesome practice which is not permitted in any other part of the metropolis.

Let us hope, therefore, that measures will be taken by the corporation; and, if not by them, by the Secretary of State, to put an end to this unwholesome and unseemly remnant of the practice of metropolitan intramural interment.

NEWSPAPER PRESS FUND.

UNDER this title an association has been formed to provide a fund for the relief of the necessitous members, and the widows and orphans of a large and meritorious class whose claims have not hitherto been recognised by any of those public institutions which have been established to alleviate the wants of other classes.

It will embrace within the scope of its operations the relief not only of gentlemen engaged in the ordinary editorial and reporting departments of the newspaper press, but those employed in the criticism of the fine arts, music, and the drama, as well as reviewers of books, and periodical literature. The institution, in fact, has for its aim and object the relief of all who look to the Newspaper Press for their maintenance and support. A good list of vice-presidents has been published; and it is proposed to hold a public dinner in the course of the ensuing month, to assist in raising funds for the purposes of the association.

The office is at 6, Beaufort-buildings, Strand; and Mr. Henry George Warren acts as honorary secretary.

THE BUILDING TRADES.

A DISTURBANCE took place at the close of last week, at the outfall sewerage works, Erith Marshes. About a thousand labourers are here employed, the greater part being Irish. One of the men having been dismissed, a large number of the labourers demanded that the foreman should reinstate him. On refusing this they struck work, and attempted to prevent the others working. A general fight ensued, which was only quelled by the arrival of thirty armed police from Woolwich. This force patrolled the noisy streets of Plumstead and Woolwich on Friday and Saturday night, where the disaffected navvies had collected together in a threatening manner.

The bricklayers and labourers' strike at Stockton has now terminated, the masters having acceded to their requests,—bricklayers to have 27s. per week, and labourers 20s. The strike has lasted exactly one month.

The sawyers and blacksmiths in the shipyards on the Wear are still out on strike. The shipbuilders seem determined not to concede the advance required, and are in some places setting on shipwrights to do sawing work; while the men, on the other hand, show no signs of giving in.

At Birmingham, a set of rules has been issued by the masters (following the example set by the workmen), to be observed between them in the several branches of the building trade:—

Rule 1 is, "That the rate of wages per day to be paid to skilled workmen be,—Carpenters and joiners, 4s. 4d.; bricklayers, 4s. 6d.; plumbers, 4s. 6d.; plasterers, 4s. 4d.; painters, 4s.; glaziers, 4s.; labourers, 2s. 10d.; excavators, 3s., all the year round; and for masons as follows:—5s. per day from the first week in March to the first week in November, and 4s. 6d. per day from the first week in November to the first week in March; but should artificial light be used between November and March, the wages to be 5s. per day. In case of less skilled workmen being employed, the master may take the opinion of the foreman as to the rate of wages such men should be paid."

Rule 2 states, "That the hours of work shall be from six o'clock in the morning to six o'clock in the evening, on the first five days in the week, and from six o'clock in the morning till half-past one o'clock on Saturday, on which day walking time to be allowed at the rate of three miles per hour, so that each man may be at the pay-table at half-past one o'clock."

The time allowed for meals is to be one hour and a half per day during summer, and one hour per day during winter, except on Saturday throughout the year, when the time will be half an hour.

Rule 8 is, "If either of the contracting parties should at any time contemplate an alteration in any of the foregoing rules, a notice stating such alteration must be given. The giving of such notice shall be limited to the month of January, and always expire on the first day of the ensuing May."

One of the demands made by the men is, that they shall leave off work at half-past five o'clock, as at present, excepting on Saturdays, when work shall cease at one o'clock.

MANCHESTER SCHOOL OF ART.

At the annual meeting held last week, Mr. Muckley, the head master, read his report, recording facts in relation to recent changes which, he said, concerned all schools of art, and that of Manchester in particular, and which, if persisted in, would irreparably damage the growth of art for years. Last year, the institution had three pupil-teachers and seven prize students; and thirty schools for the poor received instruction in drawing through its aid. The pupil-teacherships had been abolished, and in December next it was proposed to cancel the appointments of the prize students, whilst twelve of the schools alluded to, which were taught drawing through the art pupil teachers, had remained untaught during the whole year, from the circumstance of the students of the school of art being unwilling to accept the terms of the new code. He was glad to be able to report favourably on the condition of the school as to the progress of its students.

In October, he was requested by the Science and Art Department to visit Paris again, and to report on the works of the French schools then exhibiting in the Palais de l'Industrie, and the opinion he had formed on his former visit was abundantly confirmed. The French Government had determined to consider anew every point relating to ornamental art, and a special commission had been appointed. Able directors had also been selected; more institutions were about to be established; and it was certain that a steady and beneficial innovation would be the result. In a few years there would be brought about a revolution in all that related to industrial art; and it would only be by the most cautious steps we could hope to be able to compete with the French, or indeed to maintain our present position.

The report of the committee stated that they had been in correspondence with the managers of other schools who joined with them in denouncing the conduct of the department of science and art in still further crippling the provincial institutions, whilst so large a sum was bestowed on the parent establishment at Kensington. The committee had sent a deputation to London to give evidence before the select committee. Whatever might be the result of its inquiry, the committee had no hesitation in stating that unless some Government aid was afforded to replace, in part at least, the 300*l.* which the school had been so unjustly deprived of, the institution must inevitably be closed, as it could not exist on local support alone.

The financial statement showed that 381*l.* had been received in subscriptions, 286*l.* in donations, and 550*l.* in students' fees. The total income had been 1,221*l.*, and the expenditure had been 1,157*l.* The balance owing at the beginning of the year was 241*l.*, and at its close was 177*l.*

Councillor Rumney moved that the reports and treasurer's statements be adopted and printed. All the schools, both metropolitan and provincial, were, he said, in arms against the recent change made by the Science and Art Department. On Thursday last he had heard the evidence of the chairman of the Lambeth school, the most numerously attended and successful of the metropolitan schools; and that evidence quite dissipated the fears that had been entertained that the London schools would support the action of the Department. His evidence was utterly condemnatory of the proceedings of the heads of the Department: he stated emphatically, that if the Department insisted on carrying out the present regulations, the Lambeth school, which had been the means of spreading a knowledge of art amongst a great number of working people, must be closed.

AN IRON FORT FOR CRONSTADT.

THE first of a series of enormous iron bars has been successfully rolled by the Millwall Iron Company, with which Mr. Brassey is connected, for the Russian Government, for the construction of a powerful iron fort at Cronstadt. Armour-plates of immense thickness are now being made at Messrs. Brown & Co.'s works at Sheffield for the Belgian Government, to be used in the construction of some additional iron defences at Antwerp. France, it is said, intends similar works on all the more important points of Cherbourg's sea defences; and now Russia has ordered the materials for an iron fort at Cronstadt. The bars rolled were an advance even upon what has been hitherto done. Each bar when delivered was to weigh six tons, to be

15 inches square, to be tongued and grooved in the rolling, and to be perfect in its soundness throughout. When the furnaces were opened, the immense mass of metal was drawn forth on to an iron truck, heated to a brilliancy that was almost blinding. Workmen, shielding their faces as they best could, then swept the impurities from its surface with long brooms soaked in water, but which nevertheless lit like tow the instant they came in contact with the iron, which was sparkling like a gigantic firework. [Could not brooms made of steel wire be used?] It was then let down the incline to where the rollers, turned by one of the largest fly-wheels in the kingdom—more than 100 tons weight and nearly 40 feet in diameter—was waiting to crush the mass into its required form. This was the critical moment: for an instant or two the rollers failed to grip it, but at last it was caught, and the whole machinery moved slower, as, amid loud cheers from the workmen, they began to wind it in. The refuse melted iron was squirted out in all directions, and as the mass emerged from the rollers on the other side it lit up everything with a bright, lambent flame, said to be caused by the pressure to which the bar was subjected. This was only the first roll, but it was passed through three times to reduce it to its proper thickness; and the last operation was effected by lifting the bar into a bed, so to speak, made between two masses of iron, and then passing over it an enormous iron roller, which removed the curved form the bar had received in passing between the rollers. When the fort is erected in Russia it is intended to test its powers of resistance with a gun throwing a shot of a thousand pounds weight, which is to be cast in Prussia.

THE DUBLIN EXHIBITION.

The distinctive features of the forthcoming Great Exhibition of 1864 are thus described in a circular issued by the committee:—1st. The principal department will consist of articles of exclusively Irish manufacture. 2nd. The machinery court will contain machines of the newest and most improved construction, suited to manufactures of various kinds, amongst which will be exhibited the most modern appliances used in the production of linen and woollen fabrics, and which will be exhibited in motion. 3rd. Each of the varied industries of the country will be fully represented. 4th. Specimens of all minerals of the country will be exhibited. 5th. How the water-power of the kingdom may be economized, so as to employ in it manufactures at a small expense, will be shown. 6th. How the bogs may be utilized, so as to render them sources of wealth, will also be exhibited by the application of new and important discoveries. 7th. The fine arts gallery will contain important pictures from the Government collection at South Kensington, from the galleries of private collectors, and from the studios of many of the leading artists in the United Kingdom and on the Continent. 8th. For the opening ceremony, Mr. John Francis Waller, LL.D., will write an inaugural ode, and Dr. Stewart compose the music. 9th. It is intended to have musical performances, upon an enlarged scale, morning and evening, during the exhibition. All the space at the disposal of the committee has been applied for and allotted, and the most strenuous efforts are being made to have the several arrangements ready for the opening on the 25th of May. The interior of the Agricultural Hall is undergoing decorations, and the ground-floor is being boarded over with 3-inch deals. The partitions shutting off one department from the other are far advanced, as are also the apparatus for lighting and for supplying the fountains with water. Preparations are making for erecting the great organ built by Messrs. Telford, of Stephen's-green, and which is to be placed in the southern gallery in the rear of the orchestra, capable of accommodating three hundred performers. The new building in Shelbourne-yard is approaching completion, and will be joined to the Agricultural Hall at the southern aisle, by a passage covered with glass. The new building is divided into three great compartments or aisles by metal pillars, which sustain the roof. The structure is composed of corrugated iron. It will be used for machinery in motion. The contractors are Messrs. Grendon & Co., of Drogheda. The engine for driving the machinery is being placed in position. It is one of 20-horse power, and will be supplied with steam from Elson's patent boiler, erected by Messrs. Wilsenhame & Rye, of Oldham, Lancashire, free of cost. On the southern side of the court-yard of the Royal Dublin Society House large refreshment and waiting saloons will be erected adjoining the aisle of the Agricultural Hall on the south side. In front of the refreshment rooms a portion of the yard will be laid out as a garden, and for the display of articles which will not be injured by being exposed to the open air. In every part of the city shopkeepers and manufacturers are making active exertions to have their contributions sent in. Every kind of manufacture produced in Ireland will be represented. The following are the charges fixed for season tickets—for a gentleman, 21s.; for a lady, 15s.; and for children under twelve years of age, 7s. 6d.

THE ENGLISH CHURCH IN NAPLES.

The English church in Naples, of which not long ago we gave views, both internal and external, is now roofed in, and a very handsome building it promises to be. If funds were forthcoming, the church might be completed in the course of next winter. The committee earnestly appeal to all who are anxious to see the church of their own land taking its part as a witness for the truth in a country, to which, under the Providence of God, a Constitutional Government has given the priceless blessing of freedom of worship. Garibaldi, it will be remembered, during his brief dictatorship, gave the site. The author of "The Stones of Venice," closes the first volume of that work, with a statistical question which bears on this subject. First pointing out how many thousands a year are spent by this Protestant England on the Continent, he suggests that the Recording Angel may keep some such an account of these spendings as this:—

"To wooden spoons, nut-crackers, and jewelry bought at Geneva, and elsewhere among the Alps, so much; to coral horns and lava brooches, bought at Naples, so much; to glass beads at Venice, and gold filigree at Genoa, so much; * * * to ball dresses and general vanities, so much. This, I say, will be the sum on one side of the book, and on the other will be written,—

To the struggling Protestant churches of France, Switzerland, and Piedmont, so much."

Had we not better arrange this piece of statistics for ourselves, in time? Should any of our readers be led to do so, it may result in aid to the English committee in Naples, who are striving to provide a church for their countrymen.

LODGING HOUSES FOR THE CITY.

At the last meeting of the Common Council a report brought up by Deputy Fry from the Improvement Committee, authorizing the expenditure of 37,043*l.*, for the erection of model lodging-houses in Farringdon-street, was agreed to. Upwards of a year ago the Improvement Committee were directed to report as to the state of the Finsbury Estate Surplus Fund, amounting to nearly 42,500*l.* stock, which, by a previous resolution of the Common Council, was ordered to be applied to a similar purpose, and upon the extent to which the homes of the industrial poor in the city of London and its immediate vicinity, had been or might be destroyed by various schemes for metropolitan improvements then already sanctioned. The result of inquiry by the committee leads them to make an effort to meet the present requirements of the labouring classes of the City, by assisting them to obtain healthy separate homes, and that without overtaxing their means or compromising their independent position as working men. Acting under a power conferred upon them by the Clerkenwell Improvement Act, they now contemplate the erection on a plot of vacant ground on the west side of Farringdon-road of three separate blocks of buildings, fronting Farringdon-road and Ray-street. Accommodation will thus be provided for 160 families, eighty of them having three rooms, and eighty having two rooms each, with all suitable conveniences. In the general arrangements care is to be taken to insure the domestic and family comfort of the occupants, and by having a direct access from the street to each set of rooms the privacy of distinct dwellings will be secured. The basements of the various blocks will be used for warehousing purposes, and the ground-floor as shops. A design for the buildings has been approved by the common council, and the erection of them will be commenced forthwith.

MANUFACTURING DISTRICTS PUBLIC WORKS ACT.

The last printed report, made by Mr. Robert Rawlinson, C.E., to the president of the Poor-law Board, and dated the 7th of April, shows that the amount ordered by the Board on the 5th instant, was 1,147,865*l.* In addition to this sum, applications to the amount of 209,527*l.*, are now under consideration. Of the works undertaken, the great bulk of expenditure will be upon town sewerage and street improvements, including the formation of roads, paving, flagging, and channelling of streets. This class of works will improve the several districts to the greatest extent. Of the 1,147,865*l.* already ordered by the Board, it is proposed that 229,558*l.* 17*s.* 6*d.*, shall be expended on main sewers, and 555,082*l.* 2*s.* 6*d.* on street improvement works, amounting together to 784,641*l.*, or 68 per cent. of the total sum.

The length of main sewerage thus undertaken is 344,760 yards, or 195 miles. The area of paving and street works undertaken in respect of the above-mentioned sum of 555,082*l.* 2*s.* 6*d.*, is 3,186,768 square yards (about 3*s.* 6*d.* per square yard). This area makes 658 acres, the length of streets being 341,187 yards, or 194 miles, and costing about 2,861*l.* per mile. 7,838 men are now employed directly and indirectly, and receiving payment from funds provided by the Act. Adding the numbers dependent upon these men, there are about 38,014 persons supported by means of the public works. The measure of the benefits of the Act is, however, but very partially represented by this statement.

Such has been the progress of the men, that Mr. Rawlinson says,—"Before the coming summer is far advanced, I may strike out of my future reports the terms 'unskilled labourers.'" He justly expects that much advantage will result from the works already in progress, and points out others needed:—"If the population of Lancashire be placed in a sanitary state only as favourable as that of the metropolis, there will be an annual saving of some ten thousand lives, and an improved state of health throughout the entire population." Out of evil will come good.

THE RESERVOIR QUESTION.

Rochdale.—In consequence of the repeated complaints by the inhabitants of Milnrow, Ogden, and other villages in the neighbourhood of the Oldham Waterworks, at Piethorn, the public authorities of Rochdale are now about to apply to the Home Secretary for the appointment of Mr. Rawlinson, or other public officer, to inspect and report upon the state of the embankment of these waterworks. At a recent meeting of the Rochdale town council, it was stated by one alderman that he had that morning heard that the embankment, to some slight extent, had given way, and that the water was now escaping from it.

Hertford.—There was a rumour last week that the embankment of the reservoir in Port Hill field had burst. The reservoir had been filled, and there being a high wind, the water overflowed, and washed away some of the gravel of the embankment; but the reservoir, as stated by the local *Mercury*, is sunk in the solid earth, and the embankment is of no great height, so that when the reservoir is full, which is not frequently, the pressure upon the sides of the embankment is not very considerable, and if the whole volume of the water above the level of the field were to escape, no extensive injury would follow; but there is no likelihood of such a result.

Sheffield.—The annual meeting of the shareholders of the Waterworks Company has been held, in the Cutlers' Hall, Mr. W. Smith, of Dam House, in the chair. The report stated that the directors intend to admit the liability of the company; and that in order to meet the claims upon them they propose to ask Parliament for powers to raise 400,000*l.*, and to issue a special commission to assess the compensation due to the sufferers by the flood. The report recommended that no dividend should be declared; but Mr. M'Turk moved that the usual dividend of 5 per cent., which had been earned previously to the 31st of December, should be declared; and it was urged that many widows and orphans were dependent upon the annual dividends of the company, and that "no dividend" meant to them the extremity of distress and privation. It was felt, however, that under present circumstances it would not be

right to declare a dividend, and the motion was withdrawn by Mr. M'Turk, and the report of the directors adopted.

Mr. Jackson, the chief constable of Sheffield, prepared a table, showing the amount of property totally and partly destroyed within the borough by the bursting of the Bradfield Reservoir. From it we learn that the number of manufactories totally destroyed was 3; partially destroyed, 20; and flooded, 76. The number of rolling, grinding, corn, and other mills, totally destroyed, 6; partially destroyed, 14; and flooded, 23. Seven workshops, warehouses, store-rooms, &c., were totally destroyed, 12 partially so, and 127 were flooded. The number of malthouses, breweries, public and beerhouses totally destroyed, is 2; partially destroyed, 20; and flooded, 154. There were no churches, chapels, or schools, totally or partially destroyed, but 10 were flooded. Of shops flooded, there were 393. The number of dwelling-houses flooded was 4,172; totally destroyed, 28; and partially destroyed, 384. There were 4,150 yards of fence walling destroyed. Four bridges were totally destroyed, and 1 partially so. From a report of the Harvestlane district, where out of 680 houses, 600 suffered from the effects of the inundation; 5,020 loads of mud have been led away from the streets and cellars: 276 cellars have been emptied and whitewashed: for this purpose, and for purifying the roads, 68 tons of lime have been used.

ON THE CAUSE AND PREVENTION OF IRON RUST.

In a paper recently read publicly, the writer states that "one of the objections to the use of iron is its rapid oxydation when exposed to the weather," and he suggests covering it with glass or porcelain enamel. This plan, I fear, would not only be very expensive, but almost impracticable on a large scale: painting with oil colour, too, requires to be renewed every three or four years

Many a valuable hint is to be obtained from an intelligent practical labouring man, which may lead the philosopher into a train of ideas that may, perhaps, result in discoveries or inventions of great importance. When bricklayers leave off work for a day or two, as from Saturday to Monday, they push their trowel in and out of the moist mortar, so that the bright steel may be smeared all over with a film of it, and find this plan an effectual remedy against rust.

In Wren's "Parentalia" there is a passage bearing upon this subject:—"In taking out iron cramps and ties from stonework, at least 400 years old, which were so bedded in mortar that all air was perfectly excluded, the iron appeared as fresh as from the forge."

In the victualling department at Plymouth, some years ago, I observed a man lime-whiting the inside of some iron tanks, previously to their being filled with water for the service of the crew and passengers during a voyage: this was to prevent the iron rust affecting the water. In London I have also recently seen men, with a tub of lime-whiting and a mop, smearing the inside of large water-pipes, as security against rust.

Oxygen, which is the main cause of rust, is abundant in the composition of both water and the atmosphere; and that quicklime has an astonishing affinity for it is evinced in the homely practice of preserving polished steel or iron goods, such as fire-irons, fenders, and the fronts of "bright stoves," when not in use, a little powdered lime beaten upon them out of a muslin bag being found sufficient to prevent their rusting.

Another instance, very different and far more delicate, bearing upon the same principles: the manufacturers of needles, watch-springs, cutlery, &c., generally introduce a small packet of quicklime in the same box or parcel with polished steel goods, as security from rust, before sending it to a distant customer, or stowing it away for future use.

These cases are extremely curious, because, as a general rule, bright steel or iron has a most powerful affinity for oxygen: consequently it is very readily acted upon by damp, and is rusted in a short time, either by decomposing the water and obtaining oxygen from that source, or direct from the atmosphere. It is not absolutely essential that the quicklime should be in actual contact with the metal, but if somewhere near, as in the case of the parcel of lime packed up with the needles or watch-springs, the bright metal will remain a long while without the least alteration in its appearance; the lime (which is already an oxyde of calcium) either receiving an additional dose of oxygen, or being converted into a carbonate of lime. The effect of mortar in preserving the bricklayer's trowel from rust is even more remarkable, because the mortar is already hydrated, and fully saturated with water.

In these several illustrations it should be distinctly remembered that the iron or steel has had nothing whatever to do with the experiments. Under all circumstances, the oxygen has so determined a liking for the lime, that it passes the metal entirely unheeded, not an atom being left by the way. The steel and lime are no more influenced by the presence of each other than if they were miles apart; but it shows in the most convincing manner that, although oxygen has a great liking or powerful affinity for iron, it has a very much greater liking for lime, either as a hydrate or fresh from the kiln; and that its attachment commences from the moment it has the opportunity, and continues to unite, to absorb, and to again restore the quick or hydrate of lime to its original state of carbonate of lime. This process goes on expeditiously at first, but with less and less avidity during an almost unlimited period of time.

Hitherto I have not ventured to give an opinion of my own on the matter. I have merely stated facts, which may surely be turned to practical purposes upon a large scale. If this law of nature can be applied so effectually as to prevent rust forming upon needles and cutlery, why should it not apply with equal force to the Britannia tubular bridge, the iron roofs of some of our great public buildings, or the iron-clad steamers that cross the ocean? It is not likely that either wind or water will readily remove the coating of lime, the attraction of cohesion being so determined between this material and any hard, smooth surface.

There is another remarkable phenomenon in the oxydation of iron. It is this: machinery, and implements of all kinds, scarcely rust while they are in use, even if used only for a few minutes daily. It would seem as if the molecules of iron, once disturbed, continue to vibrate long beyond human appreciation; and if one might allow imagination a licence, it would suggest that, while vibrating, the oxygen cannot approach the iron; and that only as this vibration diminishes does it draw nearer and nearer, till at last, when motion has entirely ceased, the oxygen and the iron combine.

It may be supposed by some that steel and iron are different materials. This may be true in one sense, but, as far as oxydation is concerned, there is scarcely a trace of difference between them. Either pure iron or steel may be considered almost as an imaginary material: in fact, the best steel may be regarded as very little more than purified iron.

I have studied the subject of lime and its innumerable appliances during a very long period, and can myself see no reason why this material should not be generally used to prevent iron, in any form, from rusting; and, if it answer this purpose, it will be found the cheapest and most readily applied of anything, besides possessing the extra advantage of retaining its preservative quality during at least a century.

C. H. Smith.

THE PROPOSED DECORATIONS IN ST. PAUL'S CATHEDRAL.

Your correspondent, "B," appears to me to argue in a circle; or, rather, to simply revolve on his own axis: both figures would indeed apply if—as seems highly probable—his orbit is confined round that great dazzling, nay, blinding, luminary, the St. Paul's Decoration Committee.

* * * *

I now ask for a little of your space to set right certain repeated perversions of my meaning; and to deny, as I feel justified in doing, certain statements in your correspondent's last letter.

First, then, I do not wish to see either foreign artists or their works excluded from free competition in this country; albeit I am at a loss to imagine what are the very great "benefits we have derived from the employment of foreigners in the departments of painting, sculpture, architecture, or literature." I do, however, think it highly desirable that for national works of decoration, national artists should be employed when these can be had as well qualified as, or better than, foreign artists. Your correspondent says, with a view to strengthen his argument, that he is "aware of the existence," nay, more, that he is "acquainted with frescoes at Westminster, Lincoln's Inn, and elsewhere." May I ask, has he seen *all* the mural paintings at Westminster alone? I confess that it is only through my connexion with the press that I have had the pleasure of viewing Mr. Herbert's great water-glass picture, lately finished and not yet exhibited to the public; and it is only through a special application to the Chief Commissioner of Works that I have enjoyed the opportunities of examining the grand series of frescoes by the late Mr. Dyce, in the Queen's Robing-room—a room which had been closed even to that artist's personal friends during fifteen years, and to which no admission has yet been given without the order I obtained. If your correspondent has really seen these works together with Mr. Maclise's noble water-glass picture in the same building, it appears to me absolutely inconceivable upon any theory of his capacity to form an opinion for himself, that he should seriously make the following announcement:—"I have also heard," says he, "the remark of a gentleman, quite as well qualified to express an opinion on the subject as your correspondent can suppose himself to be [very cruel this, is it not?] that it is much to be regretted that, generally speaking, the artists engaged at Westminster have been unable to emancipate themselves from the habit formed by *genre* painting; and that their works constitute at most a class which might be termed *genre historique*, and fail to obtain the dignity and simplicity of the monumental works we see abroad." He goes on to say, in effect, that it might have been better had we employed foreign artists to paint the "Meeting of Wellington and Blucher at Waterloo," the "Death of Nelson," and so forth. Now, admitting the always arbitrary and often absurd distinctions of *genre* and *genre historique*, the remark can only possibly apply to a few small paintings in the corridors and upper waiting hall; but to say the remark holds good "generally speaking," is simply ludicrous, and tempts me to ask,—Is the "gentleman" referred to any relation to Mrs. Harris? Why, sir, I boldly affirm that no finer examples of the best and purest principles of monumental art have been produced in Europe since the sixteenth century than the frescoes by Mr. Dyce in the robing-room; and that if the paintings of Messrs. Herbert and Maclise are in any degree less purely monumental in character, they yet compensate for any possible deficiency in this respect by their extraordinary originality or power. Probably, however, your correspondent's chief object in advancing "the gentleman's" testimony was to throw discredit upon my "qualification to express an opinion." If so, I beg to observe, that I *ought* to know something of this matter, seeing that I have a practical as well as a theoretical acquaintance with art; that monumental painting has been a special study with me; that I have seen all the great monumental paintings in Europe; that the habit of writing on art has compelled me to weigh and compare my impressions; and that a book containing, among other things, my views on this particular subject, has been so far approved by competent authorities, that it is given as a prize-book in the schools of the Department of Science and Art. Can "the gentleman" say more?

It only remains to contradict assertions I know to be groundless. It is, then, a garbled statement of the fact, that "the committee permitted a foreign artist to compete with the English *ones*." The truth is, that although three English with one foreign artist were *invited* to compete with designs for the apse mosaic, Mr. Stevens (the sculptor) sent nothing; Mr. Watts declined to compete (though he sent sketches as a sort of memorandum of what might be done); and the designs of Mr. Leighton, the only English artist who went to the trouble of preparing finished drawings, were declined in favour of those by M. de Triqueti, though I maintain the latter to have been far inferior in nearly all the essentials of art. Does not this look like the "hole-and-corner competition" which your correspondent thinks it so highly indecorous even to hint at? Moreover, I believe, so far from this being the "only mosaic ordered," that M. de Triqueti has been commissioned to prepare designs for the spaces below the apse windows also, without any pretence of competition.

Your correspondent is obliged to resort to the *petitio principii* in regard to the painted windows "ordered" of Professor Schnorr, and the glass

painters of Munich. With Professor Schnorr's reputation I am acquainted perhaps as well as your correspondent; but he is seventy years of age; and recently, at all events, was almost blind; and in any case his designs will certainly be executed mainly by pupils in that style of German academicism which I should never wish to see naturalized in this country. Moreover, they will be mere pictorial transparencies answering none of the requirements of that monumental art the necessity of which is so much insisted on in reference to the wall-paintings at Westminster. Again, I altogether deny having "admitted" that glass paintings equal to the German could not be obtained in this country. On the contrary, I said that as we had excelled in windows of Gothic character, so, doubtless, we should in the style suitable for St. Paul's, if called upon to do so. Besides this I believe the forthcoming exhibition at South Kensington will prove that, as regards the "colour and texture" (whatever is meant by the latter) of the Renaissance glass, we have examples as near it in these qualities as is produced in Germany.

Lastly, I wish to deny what appears to me like a most disingenuous assertion, viz., that it "was by the liberal employment of foreigners by the late King of Bavaria, that the school of artists was formed whose works have given Munich a world-wide celebrity." King Ludwig certainly commissioned a few works of sculpture from Thorwaldsen, Canova, and Gibson; but were Von Klenze, Ohlmüller, Gärtner, Kaulback, Cornelius, Hess, Schnorr, Neurenther, Adam, Zimmerman, Rauch, Schwanthaler, Haller, Wagner, and their numerous pupils foreigners? or, indeed, any other artists engaged on the great national works to which Munich really owes its celebrity. If they were not all Bavarians, were they not Germans? As well almost might we call a Welsh, Irish, or Scotchman a foreigner. No, for national works Ludwig employed national artists,—as all, I should have thought, would wish to see done who have really at heart the welfare and dignity of their country, and the successful accomplishment of any scheme of national decorations. T. J. G.

THE BURSTING OF THE BRADFIELD RESERVOIR.

I HAVE read with much attention the evidence that has been given as to the cause of this sad accident, and must confess that I think as yet very little light has been thrown on it.

I have for many years been engaged as a draining engineer and Government inspector in the drainage of clay land, and have had to observe the wonderful contractile power that clay exhibits in drying. I may instance the cracking of clay land in autumn, and our ability to make the strongest soil porous by inserting 4-feet drains every 27 feet. This experience leads me to think that this accident may have been caused by the drying and cracking of the clay puddle in the embankment consequent upon the sinking of the water in the reservoir during this singularly dry winter, and its exposure while in this state to the sudden rise in the reservoir after the heavy rains at the time of the accident.

The reservoir was formed by an embankment carried across the valley, 90 feet high, for the purpose of collecting the water that came down in the wet seasons; and the embankment has been made water-tight by having a puddle of clay carried up along its centre. This puddle, it appears, was made 14 feet thick at bottom; tapered off to 4 feet at top; and was supported, back and front, by the material of the embankment, which it is admitted was formed of loose earth: so that the puddle stood like a wall 90 feet high, 14 feet thick at bottom, tapering to 4 feet at top, exposed to wet and drought as the water rose and fell in the reservoir. This puddle was made of clay worked wet, and would be dependent for its continuing imporous upon its retaining the water incorporated in it. Now, the question with me is, has this clay wall remained in a condition this winter to retain its moisture, and not undergone the change that takes place whenever clay parts with its moisture? I think not. The amount of rain-fall in the Midland Counties during the six preceding months to the accident had been remarkably small,—only 9 inches, or less than half the usual quantity,—and the springs throughout the county had been remarkably low. The ponds usually overflowing at Christmas were not half filled in February; and wells were dry that were never before known to fail at that season: so that the contents of the reservoir must have been reduced very low, and the embankment have been exposed to an unusual exhaustion of its moisture; and while in this condition the heavy rains came, and the water suddenly rose in the reservoir, filling the fissures under great pressure. The effect of this, I take it, has been that the water has been forced through the puddle. Let me ask, is this not likely to have been the case, and the cause of the accident? HEWITT DAVIS.

WANTED, A LIFE SCHOOL.

SIR,—I observe from the reports of the meeting of the Architectural Association, held on the 13th inst., that some gentlemen present entertained the opinion that the Institute would oppose the proposal to establish a life school at the House in Conduit-street. As a Fellow of the last-mentioned Society, I sincerely hope that an application will be made to the Council, who, I trust, will show by their answer that there was no ground for supposing that the Institute would act in any way as an obstruction to the interests of art and education.

It has appeared to me somewhat surprising that a life school for architects should not long since have been established by the Institute for the use of members,—old and young. From personal experience I know how feebly academy schools meet the requirements of the architect; and the value of a distinct professional school, where the architect may see attitudes and compositions which may be of service to him, cannot be too highly estimated. If such a school be established, might not arrangements be made which would include other art-workmen besides architects? as, for instance, the architectural sculptor, the artist on glass, the wall decorators, &c. Unless this can be done, I fear the architect's knowledge of the figure (although under any circumstances most desirable) will nevertheless not be of that great practical utility which it unquestionably would be if responded to by similar knowledge in the artists employed by him. EDWARD W. GODWIN.

SOUND BETWEEN TWO HOUSES.

IN reply to your correspondent as to what will deaden sound between two houses where the party-wall was 10 inches thick, and the thickness of which he has considerably increased by various methods, I think, after the many experiments he has tried, he will find the cause to be a very simple one; *i.e.*, the floor-joists of both houses either are a continuous length, or some one or two of them touch or abut at their ends.

E. BEATTIE, JUN.

PROVINCIAL NEWS.

Northampton.—The new town-hall will be opened on Tuesday in Whitsun week by the mayor, with some ceremonial and holiday proceedings.

Southampton.—An appeal to the town council as to the castle wall has received signatures of various influential inhabitants. It prays the council to preserve the portion of the castle wall opposite to Albion-terrace, lately purchased by Mr. Wheeler, of Winchester, and intended by him to be pulled down for building purposes. "This venerable relic of the past," continues the memorial, "is justly regarded as a great ornament to that part of the town. It is associated with various historical recollections, dating back to the reign of King Stephen; and, in connexion with its keep and its relation to the external defensive walls of the town, admirably exhibits by its outline the plans and method of fortification of that early period. The whole of this wall may be purchased for 100*l*.

Malvern. Several new villa residences have been recently erected at the Wells by Mr. Davis, including one for the Marquis de Lys, and another in a different style for Mr. and Mrs. Lampen. It is proposed to cut a new road from the south end of the village to the station on the Tewkesbury line. Shops of a fixed value are to be built on each side. The principal work in hand—the Proprietary College—is being pushed forward to completion. The south portion of this building has already the roof on, and the opposite wing is almost in an equally advanced state.

Middlesbrough.—An exchange is to be erected for Middlesbrough at a cost of 15,000*l*. The matter was mooted at a meeting of the iron-masters, and the greatest portion of the above sum was immediately promised for the purpose.

NEWS FROM SCOTLAND.

Elgin.—The foundation-stone of a new United Presbyterian Church was laid in South-street, Elgin, with Masonic honours, on 10th March last year, and on 3rd April next the church is to be opened for public worship. The architect was Mr. Bisset, since deceased, and the builders are Messrs. Humphrey & Rennie; carpenter, Mr. Kitchen; plumber, Mr. Hunter; plasterer, Mr. Simpson; painter, Mr. Kintrae; slater, Mr. Findlay; and sculptor, Mr. Goodwillie—all of Elgin. The church was intended to hold 500, and the cost of the whole works was estimated at 1,300*l*. The edifice is in the Pointed style, which is carried out in every part of the building. Above the door is a large window divided by a mullion and tracery, and on each side of this centre window there is a smaller one with deeply cut mouldings, and at the intersection of the labels there are carved bosses. Above the centre window there is a large circular one with cusped trefoil, and the front terminates in a pseudo bell-cot, 12 feet in height, with crockets on each corner, and a carved finial rising above. Along the west side of the church a street is to be opened. This side has five windows, divided by mullions. The south end has two windows. Attached to the church, at the south end, there is a vestry. The church is built of freestone from the quarries of the builders at Quarrywood.

Falkirk. The new episcopal church for this town has been consecrated under the name of Christ Church. The designs were prepared by Mr. R. Anderson, architect, Edinburgh. The edifice consists of a nave, with porch at the north-west corner, south transept, chancel with organ aisle, semi-circular apse, and vestry under the organ aisle. The roof is an open timber one, consisting of principals with circular braces, diagonal ties, purlins, and common rafters. The nave is lighted by plain single-light pointed windows, and a west window of two tall lights, with a circular and foiled opening over them; the chancel and apse by five narrow pointed headed windows, and a two-light window, with plate tracery, opposite the organ aisle. Buttresses are placed at the angles of the building, and at right angles to the principals of the roof. The east gable of the nave is surmounted by a belfry, and the west gable by a carved cross. The contractors for the work were Messrs. J. Law, mason; J. Black, carpenter; D. Draper, slater; R. King, plumber; and Miller, plasterer.

The Building Trades and Strikes.—The operative masons of Arbroath—who are at present a numerous and well-employed body, there being a great deal of building going on in the town and neighbourhood—have made a requisition to their employers for an advance of wages from 4½d. to 5d. per hour. At a meeting held in the George Inn, on Thursday evening, the masters consented to give 4¾d., which has been accepted. This is at the rate of about 23s. a week.——The Inverness masons have come to an agreement with their employers, so that the strike here is now at an end.——The Banff ship-carpenters have struck for an advance of wages. They presently receive 18s. per week, and they seek 2s. more, with a half-holiday.——The carpenters of Messrs. Adamson, shipbuilders, Grangemouth, lately struck work. The men have been working at the rate of 3s. 8d. a day for new work and 4s. for jobbing, and they had requested an advance of 6d. a day on both, which was refused. Messrs. Adamson, however, offered an advance of 4d. a day on new work, and granted the advance on jobbing, the men having returned to their employment. ——The engineers in the Greenock shipbuilding establishments and foundries having followed the example of the ship-carpenters and joiners in making a demand for an addition of 3s. to their wages, presently averaging 26s. and 27s. per week, have been only partially successful—some of the foundries having refused—and in these a considerable number of the younger men have struck work. Those who have given the rise have done so to the extent of 2s. making the average 28s. The wages now ranging here for those connected with shipbuilding and engineering are,—engineers, 28s.; joiners, 28s.; and ship-carpenters, 36s. The two former trades allege as their reason for this demand the great increase of wages given to the ship-carpenters.

CAUTION TO BUILDERS.

NEGLECTING TO GIVE NOTICE.

ON Saturday, the 23rd inst., Edward Martin, of Old Ford-road, Bow, was summoned before Mr. Leigh, at the Worship-street Police Court, by the district surveyor of Bow and Poplar, for having erected an irregular building to be used for making matches, without giving any notice, as required by the 38th section of the Metropolitan Building Act, 1855. The magistrate, considering the building to be of a dangerous nature, inflicted the full penalty of 20*l.* and costs, but with a proviso that if the building be made conformable to the Act within one month, the penalty should be reduced to 40*s.*

Mr. Hames, of Old Ford-road, and Mr. Moyle, of Commercial-row, were summoned at the same time for similar offences, and were ordered to pay mitigated penalties and cost for their neglect.

A builder of the name of Aldon, of Armagh-road, Bow, was also summoned before the same magistrate, for having enclosed a stable and workshops at the rear of his house with woodwork, and not with brickwork, as directed by the Act. The irregularity was ordered to be amended in three weeks.

ERECTIONS BEFORE LINE OF FRONT.

METROPOLITAN LOCAL MANAGEMENT ACT.

THE case "St. George's Hanover-square Vestry *v.* Spencer," tried in the Court of Common Pleas, on the 22nd inst., was an appeal against a magistrate's decision, under these circumstances:—The respondent was a tradesman in Half Moon-street, and he took out one of his windows on the first floor, and covered the opening with a case of glass and iron, extending the width of the window, and projecting 2 feet from the wall, but 9 inches less than the projection of the shop front. The magistrate thought that this was not a "structure or erection" within the meaning of the Act; and he also found that it was within the line of frontage; and he declined to make an order for its removal. The decision was now appealed against.

Mr. Brett, Q.C., and Mr. Sippetel, appeared for the appellants; and Mr. Keane, Q.C., and Mr. Macnamara, for the respondent.

The Court held that they could not say, as a matter of law, that the magistrate ought to have held that the glass case was a "structure or erection." There was another question upon which the magistrate had entertained a doubt, and that was whether he was obliged to receive as conclusive the decision of the superintending architect as to the line of frontage, or whether he had a right, when called upon to demolish any erection, to decide for himself whether it was or not within the line of frontage. The court were of opinion that the magistrate was at liberty to form his own opinion upon this question.

Appeal dismissed, with costs.

CHURCH-BUILDING NEWS.

Winchester.—At a meeting of the trustees of St. Cross Hospital, held in Beaufort Tower, tenders were opened for the restoration of the chancel of the church, and that of Messrs. Newman & Son was accepted. The restoration will be conducted under the supervision of Mr. Butterfield, architect, and will comprise the opening of the two large windows immediately over the altar, the making good the two octagonal piers which have been cut away, the erection of eight Derbyshire marble engaged columns, the cleansing off the whitewash from the arches of the triforia and the bosses and groining: in addition to this, the present pavement in front of the altar will be removed and be replaced by a tesselated one on the original level, which has been discovered about 3 feet below the present surface. The whole of the windows will be filled with stained glass, which is now in process of preparation. "Brother" King has been engaged in clearing and restoring the north and south chapels of the chancel.

Chichester.—The work of restoring the central tower and spire of the cathedral is still slowly, but steadily, proceeding. The platform upon which the workmen are engaged has recently been raised several feet, and this has brought into view a large portion of the ornamental external work of the tower, which can now be distinctly seen above the roof of the nave and chancel. The walls of the tower, which are 5½ feet in thickness, have now reached a height of nearly 100 feet from the ground. There are turrets at the four corners, which, like the tower itself, are embattled; and these corner turrets, ornamented as of old, have also been carried up to a considerable height. Three of them are octagonal, and the other the south-western one—circular, as in the original tower. The tower is to contain two windows on each side, each of which will be divided by clustered columns, supporting two pointed arches within larger ones of the same character. The bases and lower parts of the mullions of the great window on each face of the tower are now in their positions, while the arcading below them is finished. The "traveller" now works at an elevation of about 110 feet from the ground, and it will be necessary to have the scaffolding again raised in the course of a few weeks. This, when done, will be high enough to admit of the completion of the tower, which, it is expected, will be finished before the end of the present year. As yet no attempt has been made to connect the new work with the old, nor will this be done until the tower is completed.

Yeovil (*Somerset*).—Since the re-opening of the church of St. John, in February, 1861, several works have been carried into execution. The removal of the building erected in recent years for a vestry-room on the north side of the chancel was deemed desirable to carry out the work of restoring the exterior of the church; and the position of the crypt, under the chancel, at once suggested a substitute, with the double advantage of removing an eyesore, and of restoring an ancient feature. The taking down of the old vestry-room on the north side led to the removal of the porch to the priest's door on the south side of the chancel,—a modern erection, for which has been substituted a plain flight of steps enclosed with masonry. This part of the work, combined with that of opening the windows lighting the crypt, led the way to the necessary repairs of the chancel externally, at the expense of Capt. Messiter, of Barwick House, the lay rector, consisting of rebuilding the decayed buttresses and the restoring of the missing and defective pinnacles on the parapets, as well as the setting up of new crosses over the two eastern gables, on their original bases. Another work, decided on at about this period, and since completed, was the rebuilding of the south entrance porch. The roof is of carved and panelled stone, divided into compartments by moulded ribs, terminating on angel corbels, and having carved bosses at the intersecting points, on which are represented the Agnus Dei, the monogram of St. John the Baptist, and other devices. Carved texts in panels decorate the walls of the interior, and brass gas standards on stone carved shafts are placed on each side wall. Stone benches against the wall, and a tile encaustic pavement, complete the internal decorations. It was deemed at this time to be a fitting opportunity to open the principal western or tower entrance; to restore the window over, filling it with painted glass, and dedicating it to the memory of the late Prince Consort. This idea was speedily acted upon and carried into effect. Messrs. Hardman were entrusted to execute the pictorial glass which decorates this portion of the church, and in which are represented the principal incidents of the life and death of St. John the Baptist, to whom the church is dedicated. An engraved inscription on brass under the window, forming a scroll, describes the dedicatory object of the window, and is further emblazoned with the armorial bearings of the Prince. A tile pavement forms the tower floor, by Minton, in which are depicted the same royal badges, as well as the heraldic cognizances of the diocese. A chamber has been built for the organ adjoining the east side of the north transept, filling in the angle. The opening into the body of the church has been formed by cutting down to the floor line one of the windows, and inserting a new arch, with open spandrels filled with tracery, just below the original springing line of the window head, which still answers its original purpose for lighting the church, and is now filled with painted glass, by Hardman, representing angels playing on musical instruments, intermixed with singing-birds and foliage. The organ-chamber, with the organ-case, have been executed from the designs of Mr. R. H. Shout, of Dorchester, architect, to whom also the whole of the restorations in the church, from their commencement until the present time, have been entrusted by the committee, under the supervision of their honorary secretary, Mr. Thomas Lyon. The organ was rebuilt by Mr. J. W. Walker, of London.

Dowlais (*Merthyr Tydvil*).—Efforts are now being made to erect a new church in this populous district. The number of inhabitants is more than 17,000, and at present there is but one church, capable of holding only 400 people. The population is composed of English and Welsh. The Dowlais Iron Company, who built and keep in repair the present church, have offered an eligible site, and Mr. G. T. Clark and Mrs. Clark have offered to erect at their own expense the chancel. The trustees of the Marquis of Bute have promised 500*l.* A sum of 2,000*l.* will be required to build a suitable nave, and for this sum an appeal has been made to the friends of church movements.

STAINED GLASS.

Albury Church (*Surrey*).—A two-light window has just been painted for the east end of this church by Lady R. Gage. The principal feature in one light is the Crucifixion and in the other the Resurrection of our Lord. The window containing the Crucifixion is thus arranged:—A medallion in the centre comprises the subject, viz., our Lord on the cross, and on either hand the Virgin Mary and St. John. The background of this subject is ruby, diapered, broken by the passion-flower. Below the subject, forming the base, the emblem is again shown; and above the subject, bosses of ornament, in which the foliage of the vine is introduced; the whole surrounded by a border, on a ruby and blue ground, which completes the window. The second, as far as the ornament is concerned, is the same, both in colour and design, with this exception,—instead of the passion-flower the lily is introduced, the emblem of glory, joy, and innocence. In the Resurrection our Lord is represented rising from the tomb, the guards occupying the foreground. The whole has been finished under the direction of Mr. Gibbs, of London, in whose establishment the glass has been prepared and burnt.

Gloucester Cathedral.—The Jenner window is in hand, and will be erected in October next. The execution of the work was given to Messrs. Clayton & Bell, and the subject of the window will be the several miracles of healing performed by our Lord. The large window on the south side of the south aisle and nearest to Jenner's will be filled with painted glass to the memory of the late Mr. John Elliott. The dean, according to the local *Chronicle*, has secured five or six windows for the cloisters, and the workmen are now fixing the stonework. The clerestory windows in the south transept were promised by Messrs. Hardman at Christmas last.

St. Thomas's, Heaton Norris.—A memorial window has been erected at the east end of the chancel of this church. It has three principal lights or bays, which unitedly contain a representation of the "Crucifixion." The window is from the establishment of M. Capronnier, of Brussels.

Rotherham Church. This church has received an addition of decoration in the shape of a new stained glass window, in the south transept. Before the window could be put in, it was found necessary to restore the whole of the arch. The subjects selected for the window are all, with one exception, incidents in the life of Our Saviour. The principal subject, occupying the two centre lights, is "Christ's Charge to Peter." Each of the other four lights has two subjects. In the first is the "Annunciation." At the top of the second light the Saviour is healing the blind man; and, underneath, He is laying His hands on the little ones. The Saviour's "Entry into Jerusalem," illustrated by many of the attendant circumstances, is the first subject on the fifth light. At the bottom is the "Last Supper." The last incident illustrated in connexion with Our Saviour is "His Agony in the Garden." The other subject is the Healing of the Lame Man by Peter and Paul at the gates of the temple. The window is a memorial at the cost of Mr. John Waring, and has been put in by Mr. A. Gibbs, of London. Messrs. Blackmore and Mitchell Withers were the architects. The masonry work was done by Mr. Harper, of Masbro', and under the superintendence of Mr. Roddis.

Dowsby Church, Bourne, Lincolnshire.—One of the windows in the north aisle of this ancient church has just been filled with stained glass, a memorial, as the brass plate on the wall below describes,—"*In affectionate remembrance of Lucy Jane, the beloved daughter of Edward and Martha Scales. She died July 6th*, 1863, *in the 19th year of her age.*" In one of the openings is represented the "raising of Jairus's daughter:" in the other (being a couplet window) is shown the "raising of Lazarus." An angel holding a scroll—"I am the resurrection and the life"—is in the centre tracery light, on one side of which is an ornamental light with "A" alpha, and in the other "Ω" omega. This window was executed by Messrs. Thos. Baillie & Co., London.

Holy Trinity Church, Gainsborough.—Another stained-glass window has been placed in Holy Trinity Church by Mr. R. Capes.

Miscellanea.

Architectural Association.—Voluntary Examination Class.—During the next six weeks the class will meet on Monday evenings. The subject for Monday, May 3rd, will be "Mensuration," introduced by Mr. Lacy W. Ridge.

Metropolitan Buildings.—The draft of a bill "to further amend the laws relating to the Construction of Buildings in the Metropolis and its neighbourhood," has been prepared, by order of the Metropolitan Board of Works, and is now under consideration.

Architectural Society for Archdeaconry of Northampton.—At the meeting of the committee, held April 11, the Rev. Lord Alwyne Compton in the chair, it was finally resolved that the summer meeting of the society be held, in the early part of June, at Wellingborough. The secretary was also requested to write to some of the members of the society, who might appear likely to contribute papers at such meeting.

Memorials of Exhibitions.—The Council of the Society of Arts has appointed a committee to consider and report what memorials should record the sites of the Exhibitions of 1851 and 1862, which were originated by the Society; such committee to consist of the Chairman of the Council; Earl Granville; Sir C. W. Dilke, bart.; Sir J. Paxton, M.P.; Capt. Fowke, R.E.; Messrs. H. Chester; H. Cole, C.B.; Warren De la Rue, F.R.S.; G. Godwin, F.R.S.; P. Graham; Owen Jones; John Kelk; F. Lawrence; M. H. Marsh, M.P.; Marsh Nelson; S. Redgrave; Gilbert Scott, R.A.; Sydney Smirke, R.A.; T. Winkworth; and M. Digby Wyatt.

Liverpool Architectural Society. — The fortnightly meeting was held on Wednesday evening before last at the Royal Institution, Mr. W. H. Weightman, president, in the chair. A number of competitive designs by the student members for a drinking fountain, were exhibited; and the chairman, after remarking that they were all very creditable, announced that the council had awarded the first prize to the one marked "Spes," by Mr. Taylor; and the second to the one marked "Truth," by Mr. Jackson. A plaster model of a foot, by Mr. Rodwell, a member of the modelling class, was also exhibited. Mr. J. A. Picton then read the paper for the evening, on "The Philology of Architectural Terms."

Sanitary Condition of St. Mary's, Islington. The report of the medical officer of health for March states that the mortality of the parish has continued to be excessive during the five weeks of March, but not from any remarkable amount of zymotic disease. The total number of deaths registered was 406, which is 56 above the corrected average mortality for March in the seven previous years. There were 21 deaths from measles and 18 from scarlet fever. The latter number includes the death of a young surgeon, aged 22 years, whose life was sacrificed to his devotion to the sick poor, while fulfilling the duties of assistant resident officer at the London Fever Hospital. A fearful outbreak of infectious fever (typhus) has occurred in Mildmay avenue, —some new houses lately erected on waste ground in the rear of Mildmay-street—all of which might have been prevented had the owner of the premises carried out what has been required of him by the sanitary authorities of the parish.

The Bethnal Green Disclosures. — A numerously-attended public meeting has been held in the Peel Grove Institution, Bethnal Green, to express sympathy with Dr. Moore, who had been requested to resign his office as medical officer of the union. The following resolutions were carried with but two dissentients: "That the unwearied efforts of Dr. Moore, in endeavouring to obtain a more merciful administration of the poor-law, by bringing before the public the numerous cases of neglect and starvation which have taken place in this parish, have entitled him to the warmest thanks of this meeting and of all friends of humanity;" and "That a public subscription be commenced to compensate Dr. Moore for the heavy legal expenses and the serious interference with his private practice consequent upon the recent proceedings against him." A resolution was then passed appointing the Marquis of Townshend and Messrs. Jasslar, Chandler, & Moody the committee of the Dr. Moore Defence Fund. The conduct of the guardians was strongly condemned.

The Drinking Fountain Movement. — The new drinking-fountain in the Park, at Gloucester, presented to the local public by the Gloucester Temperance Society, has been erected near the entrance-gate opposite Falkner-street. The opening has been fixed to take place on Whit-Monday.

Princess's Theatre. — Mdlle. Stella Colas resumed the part of *Juliet* on Monday last, and was received most cordially. Her pronunciation has not improved, and at first it mars the effect of her acting; it affords the opportunity of objection, indeed, throughout; but such are her natural gifts and her skill as an actress—not to use the word genius—that it is soon overlooked, and the sympathetic auditor forgets the broken English of Miss Colas, and thinks only of the love and woes of *Juliet*. The mingled artlessness, gaiety, pathos, and intense feeling of the character are equally well portrayed, and make the assumption, as a whole, delightful.

The French Fly, and Poison from Drains.—The cause of the venomous nature of the sting produced by the common fly, which has become frequent enough, of late, in France, to create panic amongst the population, and despair amongst the faculty, has been exciting much interest amongst chemists and medical men. Several doctors have agreed that the constant opening of the drains of Paris, and the length of time they are suffered to remain under repair, have caused many inflammatory complaints to become prevalent; and it has been suggested that the venomous nature of the fly may be attributed to the same cause. Flies in great numbers are often seen to issue from the drains; and these, it is suspected, may be the minute enemies sent forth to deal death and destruction wherever they happen to alight.

Telegraphic Progress.—Mr. Collins has returned to Washington after nearly two years' absence in Russia and England. Negotiations for right of way and the construction of a telegraph across Asiatic Russia, Russian America, and British Columbia, so as to connect Europe with America by way of Behring's Straits, having been brought to a satisfactory conclusion, under very favourable terms, now awaits the final action of Congress.——Advices have been received from Sir Charles Bright announcing the entire completion of the Persian Gulf cable on the 27th of March. The line was working excellently through its whole length. The land-line between the head of the gulf and Bagdad is not yet completed.

Railway Accommodation for Working Men. In the House of Lords last week, the Earl of Derby moved the following:—"That it shall be an instruction to the committee on every railway bill providing for the construction of any new railway within the metropolis to insert in the bill provisions analogous to those contained in the North London Railway Act, 24th & 25th Vict., cap. 196, sec. 45, for the purpose of securing to the labouring classes a cheap transit to and from their labour by a morning and evening train, with such modifications as may appear to be required by the circumstances of each case." The Earl of Shaftesbury pointed out that, although the experiment might be tried, yet it could not be successful unless suitable residences for the working classes were provided along the various lines, and there were great difficulties in the way of doing that. Besides, one train in the morning and evening would be quite insufficient. The resolution, however, was agreed to.

An Eirde House in Aberdeenshire.—At a recent meeting of the Society of Antiquaries of Scotland, an account of an "Eirde House" at Migvie, Aberdeenshire, by Mr. A. Jervise, Cor. Mem. D.A. Scot., was read. This was described as one of a numerous class of underground houses in this district. It is curved in shape, about 41 feet in length, 5 feet in height, and 5 feet broad, except at the entrance, where it is about 2 feet square. It is built of rough boulders, with walls slightly converging, which are covered with flags for a roof. It has been recently cleared out, and its preservation secured by directions of the proprietor, Mr. Farquharson of Finzean. At the same meeting, Mr. Stuart drew attention to a curious specimen of the ancient sculptured stones of Scotland recently dug out of the foundations of the old church of Migvie, and to the fact now stated by Mr. Jervise, that, since the time of its discovery about three years ago, some of the sculptures of equestrian figures have been re-chiselled and defaced.

A "Burned in" Portrait of Garibaldi.—A curious artistic production,—a portrait of Garibaldi, burned on a piece of sycamore with a piece of heated iron, is spoken of by the *Manchester Courier* as an admirable likeness, done by a Mr. T. Clayton. The picture was publicly exhibited in Manchester, some time ago, when it was admired, says our authority, for its resemblance to an oil painting (than which, however, it is more transparent), and for the effectiveness of its lights and shades.

A Telegraph Clerk Committed for Manslaughter.—At Aberbeeg, on an inquest held on the bodies of two men, who were killed on the Western Valley branch of the Monmouthshire Railway, the jury returned a verdict that the deceased died from injury received at an accident on the 17th ult., which accident was caused through the negligence of the telegraph clerk, James Yendoll, of the Aberbeeg station, against whom they returned a verdict of manslaughter. The coroner read the report of the inspector of the Board of Trade, who thoroughly condemned the condition of the line, and recommended that the staff system should be adopted.

The Concentration of the Law Courts.—In the Commons, last week, Mr. Selwyn asked the First Commissioner of Works whether Government intended to accept the offer made by the Society of Lincoln's-Inn in 1859, and since repeated,—viz., either to give the ground necessary for the erection of courts for the vice-chancellors, or to build such courts at the expense of the society, upon receiving, for a term of years, 4*l.* per cent. per annum on the actual outlay on the buildings from the Suitors' Fund, but without any charge upon or guarantee from the national exchequer? In reply, Mr. Cowper said, that the offer made for erecting vice-chancellors' courts in Lincoln's-inn had not been accepted, because, although that scheme might be for the benefit of Lincoln's-inn, it would not be for the convenience of the suitor, nor meet the general desire of the public. A scheme for the concentration of the law courts, embodying the main features of the report of the commissioners, was under consideration, and would, he believed, be brought forward in a few days.

New Dining-halls for Workmen in Birmingham.—A new building has been erected and opened in Cambridge-street, in the centre of the town, for the provision of cheap meals to workmen. The building is described in the local *Gazette* as a spacious one, more like a chapel than a dining-hall. It is built of red pressed brick, and the entire cost of it, although it is a large building, was only 1,300*l.* The large doorway and the two large windows in front have semicircular heads, with brick margins, and key-stones of granite. In the pediment there is a semicircular pierced iron ventilator, with stone dressings. Inside the doorway a small portion of the hall is partitioned off and covered in with boards, to prevent draughts of air through the hall when the outer door is left open for customers. The hall is a quadrangle, 115 feet long by 34 feet wide. The ceiling is 24 feet high, and light is admitted through skylights in the roof and through the windows at each side of the hall. There are forty tables, giving accommodation to 400 persons. The seats are backed, but not cushioned, and the tables are covered with mahogany oilcloth. The walls are papered with a dark paper for a height of about 5 feet from the ground, and the remaining portion is covered with a lighter paper. There are a large mirror and a clock at one side of the room. The bill of fare includes some dishes which are not provided at the Slaney-street dining-hall. The following is a copy of it:—Prices: cup of coffee, 1d.; cup of tea, 1d.; cup of milk, 0½d.; bread and butter, 1d.; bread and cheese, 1d.; slice of bread, 0½d.; boiled egg, 1d.; slice of broiled bacon, 2d.; ginger beer, 1d.; all of the best quality, and always ready. Besides the above, may be had, from twelve to half-past two,—bowl of soup, 1d.; plate of potatoes, 1d.; plate of hot roast beef, 3d.; plate of hot boiled beef, 3d.; plate of hashed mutton, 2d.; plate of hashed beef, 2d.; plate of cold beef, 2d.; plate of cold ham, 2d.; plate of plum-pudding, 1d.; plate of rice-pudding, 1d. Dinner (between the above hours, of soup, cold or hashed meat, potatoes, and pudding), 4½d. Breakfast (with the morning newspapers) ready at eight o'clock. The room is kept warm with stoves and gas, and is well ventilated. On the left-hand side there is a small room for women, with seats for between thirty and forty. This, it is expected, will be a very valuable part of the institution.

CHURCH-BUILDING IN THE ANDAMAN ISLANDS.—The foundation-stone of a church has been laid in the Andaman Islands, for behoof of those curious little men who look like a living remnant of the drift era of which so much is said at present. The chaplain, the Rev. Henry Corbyn, does not entertain the old opinion that the Andamanese are cannibals, and has no fear, therefore, of their taste for roasted missionary: it seems that of late they have shown very friendly feeling towards the few English settlers in the islands.

WATER BOILED IN PAPER VESSELS.—M. Terreil has laid before the Chemical Society of Paris facts proving that the paper on which a layer of water is placed may be heated to the highest temperature without being changed. The paper employed by M. Terreil was ordinary writing-paper. He states, in conclusion, that the non-conductibility of the paper for heat, and the constant evaporation of the liquid through the pores of the paper, prevent the combustion of the paper during the ebullition of the water when heated in vessels of paper. It is a curious fact that an iron kettle of boiling water may be taken off the fire and held on the hand without inconvenience from the heat.

HINTS TO TOWN GARDENERS.—As a general rule seeds should be sown in soil that is rather moist, and which has been previously made quite smooth. The pots should be prepared just as if for cuttings. The seeds being scattered thinly or placed separately on the soil, a little fine dusty earth should be strewed lightly over, and the pots should stand in a light and airy place: a roof or balcony does well for this. In all cases, however, it is best to let them be sunk in a box nearly to the rim, to prevent the serious injury incurred by over-dryness. March is, for town gardeners, the best time for sowing seeds, except, indeed, when we can preserve them through the winter for early spring flowering. Nemophila, stocks, mignonette, and sweet peas, are often treated thus, when they flower early, in a window or in the garden.—*Churchman's Family Magazine.*

HEBREW ANTIQUITIES IN PARIS. Senator de Saulcy, member of the French Institute, and Abbé Michon, have returned from Palestine and Trans-Jordanic Arabia. They were enabled to explore the inner wall of the Solomonic Temple, erect scaffoldings, take impressions, and make drawings of those precious relics of Solomonic architecture which have been spared by the conflagration of Titus. The most important of these labours is the excavation and complete uncovering of the vast necropolis known as the "Tomb of the Kings." The monument of expiation which King Herod erected on these tombs, after they had been desecrated for the sake of the treasures they contained, was found in the ruins. The travellers discovered a hitherto unknown mausoleum, containing the sarcophagus of a king of Jerusalem. The royal corpse crumbled into dust the moment it came into contact with the outer air. There is a Hebrew inscription belonging to the most ancient period on the lid of the marble sarcophagus, which is now in the Louvre, together with other antiquities found during the expedition.

GATESHEAD-ON-TYNE.—The great extension of manufactures on the Tyne of late years, and the consequent influx and increase of population in this town and the neighbourhood, have led to the conversion of large areas of ground, hitherto waste or agricultural, into building sites and new streets. Many of them, however, being in the hands of separate owners, no general system of design or arrangement has been practicable, and many groups of streets remain long incomplete and devoid of proper communication with other and adjoining groups. The importance of avoiding these and other consequent evils has been recognised by Sir Walter and Lady James, the owners of an extensive area of land in the vicinity of the town; and by their instructions upwards of 160 acres have been laid out by Mr. S. Oswald, architect, of Newcastle, in main intersecting roads, and adjoining streets, with sites for various classes of houses and villas, the latter being for the most part so located as to command picturesque views of the valleys of the Tyne and Team rivers; and where an extended prospect cannot be had, other arrangements in compensation have been designed. The erection of a church, in a central position, being contemplated on the estate, a suitable site has been provided, together with a park or pleasure-ground, for the recreation of the residents and the public.

OPENING OF FREE LIBRARY AT BIRKENHEAD.—The new Free Public Library building, which has recently been erected in Hamilton-street, has been formally opened. The body of the hall, to be used as the reading-room, is lofty, lighted from the roof, and the walls bear busts of eminent literary men, including Shakspeare. The gas chandeliers are in keeping with the rest of the building. At one end is a recess, used as the library proper, in which some 8,000 volumes have already been deposited. By a flight of steps a balcony running round this recess is reached. The architect was Mr. James Fisher, of Birkenhead; and the builders were Messrs. Roberts & Robinson.

GAS.—The Directors of the Brighton and Hove Gas Company have been induced to make a reduction in the price of the gas supplied to the town of New Shoreham. The present reduction will be 6d. per 1,000 feet, and a further reduction of 6d. will be made in March, 1865. The superintendent of the Brighton Company was closely questioned, at a meeting on the subject, as to the low price charged at Plymouth. The meeting resolved that the reduction in price promised should begin at Midsummer, 1864, instead of March, 1865.——The Market Rasen Gas Company are now engaged in making considerable additions to their works. An excavation, closely abutting upon Nursery-street, has been made for the placing of a second gasometer.

DOCTORS AND PATIENTS.—It is reckoned that for every death in a year there are constantly two persons ill in the year; and, so reckoning, the Census returns of 1851 and 1861, and the mortality returns of the intervening years, give the following results:—In all England and Wales, 47 persons constantly sick to one medical man; including, under this last term, not only physicians and general practitioners, but also such assistants and medical students as are above 20 years of age. In London the proportion is only 24 resident sick to one doctor; in the South-eastern counties, 37; South-western, 45; South-midland, 49; West-midland, 54; Eastern, 57; Northern, 58; North-midland, 59; Yorkshire, 64; Monmouthshire and Wales, 75; and in the North-western counties (Lancashire and Cheshire), as many as 80. The calculation shows one medical man to every 1,071 persons in England and Wales; but the numbers differ so greatly in different parts of the kingdom, that in London the medical men are one to every 514 persons, and in Monmouthshire and Wales, only one to every 1,769.

TENDERS.

For New Primitive Methodist Chapel and School at Tadcaster. Mr. Joseph Wright, architect. Bricks, lime, sand, and leading, not included:—

Bricklayer, mason, plasterer, and slater's work.

Bilbrough	£236 8 0

STAINED GLASS WORKS.—HEATON, BUTLER, & BAYNE have REMOVED to their new and extensive Premises,
KING STREET, COVENT GARDEN, W.C.

ADVERTISEMENTS.

ANNUAL CIRCULATION, 15,000.

MURRAY'S HANDBOOK ADVERTISER
(Published annually in May).

Printed for the convenience of those who are desirous of communicating information to Travellers, and inserted in MURRAY'S FOREIGN and ENGLISH HANDBOOKS issued during the season.

This medium of advertising presents unusual advantages to Insurance Offices, Steam, Railway, and other Public Companies, Landlords of Inns, Owners of Baths and Mineral Springs, Teachers, Tradesmen, and others, by enabling them to bring under the immediate notice of the great mass of Travellers, who resort to Continental Europe and other parts of the world every season, in the most direct way, the various merits of their Railways, Associations, Steamers, Hotels, Articles of Merchandise, Works of Art, and such other information as they may desire to make known; while, instead of being limited to the casual publicity of a Daily, Weekly, or Monthly Periodical, it has the additional merit of being displayed in a work of permanent interest and perpetual reference.

As only a limited space is allowed for Advertisements, preference is given to those which are exclusively addressed to Tourists.

Advertisements for insertion during the Season 1864, must be forwarded to the Publisher by the 2nd of MAY, accompanied by a remittance.

JOHN MURRAY, Albemarle-street.

In the Press,
A LECTURE: the POSITION of the ART-WORKMAN,
By A. J. B. BERESFORD HOPE, Esq. M.A. D.C.L. F.S.A.

POLYTECHNIC.—Patron: H.R.H. the PRINCE of WALES.—Every day at quarter to 3 and quarter to 8, except Monday and Thursday Evenings, when it is given at quarter to 9 o'clock. Professor Pepper's New Ghost Lecture Entertainment (J. H. Pepper and Henry Dircks, joint inventors). 1st part—Ye Knicht watching his squire. 2nd part—The Ghosts of Shakspeare. 3rd part—The Ghost of the Diving Bell—Heinke's Patent Diving Dress. During the Ghost Lecture, Professor Pepper will return, and appear on the stage as a Ghost a few inches high. Lecture by J. L. King, Esq. on "Some of the Aquatic Insects and their Transformations." Mr. G. W. Jester's Ventriloquial Entertainment.

A FREEHOLD MANSION TO BE SOLD. The elegant Furniture may be had at a valuation. There are four reception rooms, two being 30 feet in length; eleven best bed rooms; stabling for eight horses and coach-houses for four carriages; detached servants' offices; extensive ornamental grounds, with green houses, in all 28 acres; gravelly soil; near Sunningdale Station, South-Western Railway, half a mile from Windsor Great Park, and fifty minutes from the Waterloo Station.—Apply to J. MAY, Esq. Solicitor, 67, Russell-square.

VALUABLE PREMISES.—Large, open SPACE, with an area of 1,250 square yards, TO BE LET, immediately, with or without water communication. There is a frontage of 187 feet to the road, situate in a most thoroughfare, one mile north of the Bank. The extension of railways and city improvements, causing such a consequent scarcity of premises, render these extremely valuable.—Apply to E. & W. STURGE, Bridge-wharf, City-road, E.C.

DEPTFORD, Kent.—To BUILDERS, ENGINEERS, SHIPWRIGHTS, SMITHS, MANUFACTURERS, and Others requiring or desiring commodious Tenements or Residences for their workmen, or to societies or individuals wishing to provide Improved Dwellings for the Working Classes. The Corporation of Trinity House, having otherwise provided for the inmates of their Hospital, known as the Lower Ground Almshouses, at the Stowage, Deptford, comprising Twenty-six distinct Dwellings, hereby give notice, that they are willing to receive TENDERS for LETTING the said HOUSES on a repairing lease for 21 years or more, as may be agreed. Each house consists of a basement, ground, and chamber story; five having yards and additional offices; and the others can readily have every necessary accommodation added to them. The whole is approached from the street by a centre gateway, and is inclosed within itself as a distinct property. These houses are situated in the centre of the large manufacturing district on the south side of the Thames. They are also, from the cheapness of the crossing at the ferry, very conveniently situated in relation to the large district of the manufactories on the opposite side of the river, from Mid-wall and the Isle of Dogs to the localities adjoining. For permission to view, apply to Mr. NORTHWOOD, No. 3, on the Premises. The whole are to be Let by Tender, in One Lot, and MONDAY, the 30th of MAY next, is the day fixed by the Corporation for receiving the Tenders.—For further particulars apply at the Offices of Mr. RICHARD SUTER, Architect and Surveyor, 21 Gracechurch-street, E.C. and where a plan of the property may be seen.

P. H. BERTHON, Secretary.
Trinity House, March 28, 1864.

BUILDING LAND at CHITT'S HILL, WOOD GREEN, overlooking three different counties, and fronting the high road, eight minutes walk from the station and Alexandra Park, TO BE LET for the erection of superior Villa Residences, which are in great demand in this beautiful locality. Term, 99 years. Money advanced if required.—A plan may be seen, and particulars obtained, on application to S. HEWITT, Architect and Surveyor, 191, Great Russell-street, Bloomsbury, W.C.

WATERSIDE PREMISES, CITY-ROAD.

MESSRS. FULLER & HORSEY are instructed to LET, on Lease, fr in Michaelmas next, Extensive WATERSIDE PREMISES, occupying a site of 21,000 superficial feet, situate on the Wenlock Basin, City road, and comprising a spacious and substantial modern brick-built manufactory of two floors, engine and boiler houses, with 50 horse power at one engine and three Cornish boilers; range of brick-built offices, and paved yards with gateway entrances. There is a water frontage of about 270 feet.—For further particulars apply to Messrs. FULLER & HORSEY, No. 13, Billiter-street, London, E.C.

Apply to Mr. T. K. GREEN,
25, COLLEGE HILL, CANNON STREET, E.C.

TO BREWERS and OTHERS.—For SALE, by PRIVATE CONTRACT, a Plot of FREEHOLD BUILDING LAND, in the immediate proximity of the Reading Station on the line abutting upon a road which will soon become one of the principal thoroughfares to those stations. The site is admirably adapted for a good accommodation Hotel. Money advanced if required.—Apply to Mr. WM. WEEDON, Solicitor, Reading.

FREEHOLD LAND TO BE SOLD or LET, on Building Leases.
2 Acres, near the Station, at Forest Hill.
1 Acre, adjoining Norwood Junction Station.
2 Acres, Grengall-road, Old Kent road.
A large WHARF TO BE LET, near the Old Kent-road.
Apply to Mr. MAY, Acorn Timber Wharf, Old Kent road.

BUILDING LAND, Reading, Berks.—FOR SALE, by PRIVATE CONTRACT, in lots suited for the erection of private Dwelling-houses, several acres of FREEHOLD BUILDING LAND, forming part of the rapidly improving Western Suburb of the Town. The roads on the Estate are excellent. The property is ornamentally timbered, and several portions of it are well fenced in with hedges, and planted with trees and shrubs of many years' growth. Distance from the centre of the Town and three Railway stations, about a mile. A second Church is being erected in the immediate neighbourhood. Money advanced if required.—Apply to Mr. W. WEEDON, Solicitor, Reading.

TO BUILDERS.—Four Acres of FREEHOLD LAND, only three miles from the City, and on a main road a few yards from the new station which the London and Brighton Railway Company have engaged to construct on the line. They are now building across the high road known as Queen's road, New Cross, TO BE LET, on Building Leases.—Apply to Mr BIRKS, 11, Clifton cottages, Clifton-road, Pomeroy-street, Old Kent-road, S.E.

BUILDING LAND at KENNINGTON LANE, about five minutes' walk from the Elephant and Castle, TO LET, for houses which are in great demand. Ground-rent 4£. Also HOUSES and SHOPS FOR SALE, in carcase or finished.—Apply to Mr. J. SEXBY, 35, Lower Kennington-lane, S.

SANDOWN, ISLE of WIGHT.—Opening of the Railway.—BUILDING LAND, opposite the proposed Pier, and in full view of the magnificent Bay, on leases for 1,000 years.—Apply to Mr. WITHERS, Timber Merchant, Sandown.

IMPORTANT to COAL PROPRIETORS, CAPITALISTS, and OTHERS. The owners of valuable MINES of COAL, lying within and under a compact freehold estate of upwards of 150 acres, situate about three miles from the important manufacturing town of Blackburn, Lancashire, are prepared to treat for the absolute SALE of the COAL, or to enter into favourable arrangements for leasing the same for a term of years. Good turnpike roads intersect the estate, and the same is within very easy distance of railway and canal.—For further particulars apply to Messrs. ROBINSON & SON, Solicitors, Blackburn.

EASTBOURNE, SUSSEX.—FREEHOLD PROPERTY FOR SALE.—NOTICE to BUILDERS and BRICKMAKERS. TO BE SOLD, by PRIVATE CONTRACT, a BUILDER'S PREMISES, in the centre of the town. Large yard, stables, &c.; large workshops, fitted with steam machinery, all new two years ago, and can be seen at work any day. The premises can be had possession of in about three months. The present proprietor is leaving the town. Also a BRICKFIELD, in full work, with a House on it. Would be sold separate or together.—For particulars, apply to WILLIAM BARKHURST, Builder, Eastbourne.

TO RAILWAY CONTRACTORS and BRICKMAKERS.—TO BE EXCHANGED for BRICKS, ONE or a PAIR of VILLA RESIDENCES, situate in Shaftesbury-road, Hornsey Rise, where they are to be delivered within three months.—Inquire of Mr. BEALL, Crouch end, Hornsey.

THAMES BANK, PIMLICO.—Extensive PREMISES, with the partial use of a private dock entering from the Thames, suitable for a builder's establishment or a factory, to Messrs. SCURRY & WEIGHT, Surveyors, No. 6, Salisbury-street, Strand, W.C.

TO MONUMENTAL MASONS.—A small FREEHOLD BUSINESS PREMISES TO BE SOLD, well situated in a populous district where there is a good opening (or a Partner with 150l. to 200l.).—Address, enclosing stamp for reply, to S. R. Post office, Ipswich.

MANUFACTURING JOINERS' and BUILDERS' PREMISES, consisting of Sawing, Planing, and Moulding Factory, and Joiners' Shops.—TO BE SOLD, the LEASE and GOODWILL of extensive PREMISES, admirably situate, near Temple Bar, fitted with all requisite machinery, and rebuilt within the last few years, conducted by the proprietor for many years. The stock and machinery at a valuation. Ill-health the cause of sale. Apply on the first instance, to Mr. JAMES BEAL, Auctioneer, 209, Piccadilly, W.

TO BUILDERS and OTHERS.—BROMLEY, KENT.—LAND TO BE LET, for Building, on Lease, for ninety-seven years, about half a mile from a railway station and adjoining the town of Bromley. Soil, sand and gravel, with a quantity of water.—For particulars, apply to Messrs. PRESTON & DOUMAN, 15, Gresham-street, E.C.

FACTORY or WAREHOUSE LAND TO BE LET or SOLD, 24 acres in extent, with frontage of 330 feet against the Thames. Also Frontages for Dwelling Houses.—For particulars apply to Mr. W. H. HEATH, 4, Broad-street-buildings, E.C.

TO BE LET, or SOLD, eligible FREEHOLD BUILDING LAND, tithe free, land tax redeemed, within two minutes' walk of New Malden Station, ten miles from London, fronting main road to Kingston and Epsom. For particulars, apply to Mr. DOUBALL, Malden Farm, New Malden.

BRICKFIELD, in the Cowley District, TO BE LET or SOLD. Has a siding into the Great Western Railway. Special rates paid for carriage, either by rail or water. Average depth of clay, 4 feet; extent, about 30 acres. Plant, buildings, stock, &c. will be included in the purchase. Part of the purchase money may remain on mortgage, or assistance may possibly be given to form a company.—For particulars, apply to Messrs. HOVENDEN & HEATH, 4, Broad-street-buildings, E.C.

BUILDING LAND to BE LET.—TO BE LET, at Bromley, Kent, several PLOTS of BUILDING LAND, on lease for 99 years. Money will be advanced. For particulars, apply to G. T. DAVIS, Esq. Solicitor, 32, Mincing-lane, City; or to Mr JOSEPH LAVENDER, Architect and Surveyor, 25, Bedford-row, London.

ABBEY WOOD, near Belvedere.—Eligible FREEHOLD LAND TO BE LET, in large lots, for the erection of villa residences. Term, 99 years. Liberal advances if required. For plans and particulars, apply to WM. WILLIAMSON, 9, Essex-lodge-terrace, Plumstead-main road, S.E.; or to Mr. ROBERTS, Architect, 35, Laurence Pountney-lane, City.

SUNNINGHILL WELLS, near ASCOT, BERKS.—FOR SALE by PRIVATE TENDER, a valuable and picturesque FREEHOLD ESTATE, known as The Wells, Sunninghill, which comprises a dwelling-house which has been used for many years as an Inn, with a large assembly-room, extensive stabling and buildings, meadows and gardens, and pleasure grounds, with ornamental timber and a mineral spring. The property is suitable either for the sale for a New Hall, or for the erection of elegant villa residences, being in the centre of a beautiful district, near to the Race-course, and containing an area of about four acres and a half, with immediate possession. A plan, with full particulars and conditions and form of Tender, may be obtained from Messrs DARVILL, SON, & POULTON, of Windsor, the Vendors' Solicitors. The TENDERS must be sent to Messrs. DARVILL & CO. on or before the 17th of JUNE next, indorsed "Tenders for the purchase of the Wells, Sunninghill." The Vendors will not bind themselves to accept the highest or any Tender.

TO BE LET, cheap, a good PLUMBING, PAINTING, and GAS-FITTING BUSINESS, established twelve years.—Apply to Mr. LEAGE, 243, City-road, E.C.

TO BE LET, on LEASE, to a responsible tenant, for a term of about sixteen years, TWELVE SEVEN-ROOMED HOUSES, in the Waterloo-road, producing a rental of 300l. per annum. For particulars, apply to Messrs. ATKINSON & HATHAWAY, 14, Bedford-row, W.C.

WATERSIDE PREMISES, PIMLICO.—TO BE SOLD, with immediate possession, a LEASEHOLD WHARF, in Upper Belgrave place, containing an area of 4,220 feet; held for a term of sixty years, at a nominal ground-rent. The Wharf is inclosed with folding-gates, and the use of a landing crane will be included. The improvements now being made on the Marquis of Westminster's property in the immediate locality, will materially increase the future value of these premises.—For particulars and cards to view, apply to PULLEN, HORNE, & EVERSFIELD, 40, Parliament street, Westminster.

TO DIRECTORS of CHARITABLE INSTITUTIONS, CAPITALISTS, BUILDERS, &c.—TO BE SOLD or LET, on Building Lease, a Square Block of first rate LAND, 13 acres in extent, gravel subsoil; roads on two sides; 14 miles from London, West, a few hundred yards from a railway terminus.—Apply to Messrs. BRIDGES, SAWTELL, & CO. Solicitors, 23, Red Lion-square, W.C.

PRIZE MEDAL TO MAW & CO. INTERNATIONAL EXHIBITION, 1862.

IMPERISHABLE TESSELATED PAVEMENTS, combining a highly decorative and economical substitute for ordinary floors of their perishable coverings. MAW & CO.'S Pattern-book, designed by M. Digby Wyatt, esq. together with a special design and estimate of cost adapted to any given dimensions of hall, passage, conservatory, verandah, frieze, &c. will be sent on application to Benthall Works, Broseley, Salop.

May be seen at the Exhibition of Building Inventions, &c. now open at the Galleries of the Architectural Exhibition, 9, Conduit-street, free.

London Agents—W. B. SIMPSON & SONS, 456, West Strand, who have on view a great variety of Specimens of the Pavements.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21 Wharf, Macclesfield-street North, City-road Basin, N. 2ndly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and 3rdly, that the "Reports of the Juries," page 581, of the Great Exhibition, 1851, note the grant of a First-class Medal and rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

TWO PRIZE MEDALS AT THE INTERNATIONAL EXHIBITION, 1862.

MAGNUS'S ENAMELLED SLATE obtained the Medal of the Society of Arts; the Prize Medal at the Great Exhibition, 1851; Two First-class Medals at the Paris Exhibition; and Two Prize Medals at the International Exhibition of 1862.

Trashy imitations of this beautiful material are being palmed upon the public. Architects are therefore requested to see that the name of "MAGNUS" is upon each article.

Chimney-pieces, Billiard-tables, Table-tops, Baths, Wall linings, &c. a New Illustrated Catalogue of which can be had at the Pimlico Slate Works, 30 and 40, Upper Belgrave-place, Pimlico, S.W.

MINTON, HOLLINS, & CO. Stoke-upon-Trent, beg to inform architects, the gentry, and others, that in consequence of the increasing demand for their Encaustic and Mosaic Pavements, and with the view of facilitating the execution of orders, they have opened an additional Show-room, at their Establishment, No. 30, Conduit-street, London, where experienced draughtsmen will be constantly in attendance, to afford all information required.

DRAWINGS and ESTIMATES, on the receipt of plans, will also be promptly furnished, on application at the Manufactory, Stoke-upon-Trent.

MINTON & CO. take the present opportunity of stating that they have always in stock a large and varied assortment of tiles, suitable for flower boxes, stoves, and other ornamental purposes.

BRICKS.—1,000,000 Good STOCKS. A Quarter of a mile from railway-station, half a mile from the waterside. To be seen in Maxey-road, Plumstead.—Address, W. G. DAWSON, Plumstead Common, S.E.

BRICKS.—1,500,000 hard burnt Rough Stocks can be delivered, at low rates for cash, at the Bricklayers' Arms Station, as follows:—100,000 of last season's make, immediately, and 50,000 newly-burnt, weekly, commencing the second week in MAY.—Apply to FREDERICK KING, Surveyor and Land Agent, Pope's Head Alley, Cornhill, E.C.

BRICKS.—300,000 GREY STOCK BRICKS FOR SALE.—Apply to SAMUEL ANDREWS, Merchant, Hertford.

BRICKS.—A large quantity of every description of Superior BRICKS is now on Sale, at WILLIAM HILL'S Brickfields, Ilford, and Wanstead Flats, Essex. The bricks from Ilford can be delivered alongside in the Thames, or in trucks at the station on the Great Eastern Railway. Prices on application at the Office, No. 3, Whitechapel-road; or to the Foreman, Upnall Brickfields, Ilford, Essex.

FIRE BRICK and CEMENT WORKS, WOODEN BOX, near BURTON-ON-TRENT. Established 1847.

JOHN KNOWLES, HAWLEY NEW WHARF, HAMPSTEAD ROAD, CAMDEN TOWN, N.W. Fire Bricks, Tiles, and Lumps of all sizes, or made to order on short notice.

Crucible and Cement Clay, Whitesand and for Exportation. EVERY ARTICLE MANUFACTURED AT THE ABOVE WORKS. N.B. These goods are supplied to the largest Steel Smelting, Armour Plate, and Crucible Works in the World, to which references can be given on application.

TO BRICKMAKERS.—All Parties who BURN BRICKS in CLAMPS are invited to inspect the NEW MODE of SETTING, patented by Mr. ROBERT WHITE, and which may be seen in operation at the Brickfields of

J. B. WHITE & BROTHERS, Erith, Kent.

The advantages of this plan are two fold.

1st. Nearly all the bricks are burnt into stocks, and the yield of inferior bricks is reduced from 35 to about 10 per cent of the total make, which in itself represents a large permanent saving.

2nd. The bricks are so much improved in colour and soundness as to give them a considerable additional value in the market over common stocks.

Licenses for use of the Patent granted to Brickmakers, on application to the Patentees 17, Millbank-street, Westminster

Also Licensed Lighterman, of 11, Millbank-row, S.W.; and Licensed Lighterman and Wharfinger, of Hermitage Steam Wharf, Wapping, E.

TO CONSUMERS of BRICKS.—A remarkable Deposit of the finest BRICK CLAY, immediately adjoining a harbour of shipment, has lately been brought under the notice of the metropolitan building trades. This Clay, which is of fine colour, has the unusual quality of entire freedom from stones, chalk, or other foreign matter that can interfere with its manufacture, and is also of suitable consistency to enable it to be passed from the clay bed through the machines without the usual expensive processes. While the fineness of its quality cannot be exceeded, its adhesive properties are so great that Bricks and Flooring Tiles made from this Clay can be thrown about or unloaded from carts by tipping without breaking. There is every convenience for making these Bricks on a large scale, there being an abundance of suitable land for works and floors, with coal by sea or train at a low rate. There are also unusual facilities for loading vessels in one of the finest harbours on the coast, having plenty of space. The prices at which these Bricks and Tiles can be supplied are from ten to twenty-five per cent. under the lowest London prices. A Company is now about to be formed to make 100,000,000 of these Bricks.—Samples of Clay, also of the Bricks and Tiles made from it, can be seen at the Offices of JOSIAH FORSTER FAIRBANK, C.E. 20, Parliament-street, Westminster, S.W.

19th April, 1864.

THE PATENT CONCRETE STONE COMPANY (LIMITED) are prepared forthwith to GRANT LICENCES in each town for the several objects of their Manufacture

These are,—1st The Patent Concrete Stone (Ransome's Patent), moulded and not burned; inexpensively made; durable, hard as York stone; applicable to every purpose, both constructive and decorative, for which natural stone is used.

2nd. Indurating Solutions, also simple, easy, and cheap in applications, for stopping and preventing decay in stone and brick.

3rd. The Patent Silicoton Paint, comparing well with oil paint in every particular hard, permanent, incombustible, used on iron, wood, stucco, brick.

The authorized Agent of the Company is now travelling through the Northern Counties, and will visit the principal towns for the purpose of opening negotiations on the Company's behalf.

Applications may be made to the Secretary of the above Company, at 16, Parliament street, Westminster, S.W

DESACHY'S FIBROUS PLASTER.
GEORGE JACKSON & SONS,
HAVING BECOME THE PROPRIETORS OF THE PATENT RIGHTS IN
DESACHY'S FIBROUS PLASTER,
Beg to call the attention of Architects to its Capabilities.
It is adapted for the speedy and economical production of any coffered or circular work, waggon-headed ceilings (all bracketing being avoided, as it is fixed to the joists direct), fluted and plain columns, panelled dados, all kinds of diaper, &c., for the linings of walls and ceilings, and for all purposes of ornamental plaster.
The advantages are great. It is of great lightness and of excellent quality; it is not inflammable, and is ready to be painted immediately after it is made; it has been used (under the direction of Owen Jones, esq.) for the ceiling of St. James's Hall; at Messrs. Osler's, Oxford-street; Mr. Hancock's, New Bond-street; the Crystal Palace Bazaar; the Home for the Aged, South Lambeth; and at various other Works.
SPECIMENS CAN BE SEEN AT 49, RATHBONE PLACE.
DESIGNS MADE FOR ANY WORKS.

CHARLES WINN, TIMBER MERCHANT,

NEW CRANE WHF., SHADWELL, E.; and VICTORIA WHF. and SAW MILLS, DEPTFORD, S.E.

HALL, BROTHERS,

LATE OF

MERSTHAM GREY STONE LIME WORKS,

Assigned the above works on the 25th of March, at the expiration of their Lease, in consequence of being unable to effect such terms for a renewal as they could accept. The works have been used by them for nearly forty years, during which time a considerable business has been established; and now to give them up so unexpectedly, with only a few weeks' notice, without any remuneration for the trade, has caused to them great loss and disappointment.

Anxious that their customers should not be inconvenienced by the sudden change, HALL, BROTHERS, have arranged for them to be supplied in LONDON, and by Railways from these Works, upon the terms then existing, until the 24th JUNE, by Mr. W. PETERS.

They wish to remind their customers and the public that their business in Grey-stone and Chalk Lime, Cement, Slates, Sand, Coal, &c., is carried on as usual at Croydon, Coulsdon, Redhill, and Reigate; and, should they be successful in obtaining premises for the manufacture of Grey-stone Lime, they will resume their trade in London and on the Railways, and hope for a continuance of that support they have hitherto so generously afforded them.—Address,

HALL, BROTHERS, CROYDON, OR REDHILL, SURREY.

BORSTAL PORTLAND CEMENT WORKS,

ON THE MEDWAY, NEAR ROCHESTER, KENT.

CLAPTON.—Important Sale of BUILDING MATERIALS of Two Mansions, GROWING TIMBER, &c. on the Clapton Hall and Priory Estate

PULLEN, HORNE, & EVERSFIELD are instructed by the London and Suburban Land and Building Company, Limited, to SELL by AUCTION, on the PREMISES, on THURSDAY, MAY 19th, and following days, at TWELVE o'clock, in Lots the whole of the capital MATERIALS and FITTINGS of the spacious MANSIONS distinguished as Clapton Hall and The Priory, Lower Clapton; comprising 350,000 capital bricks, 30 squares of slates, prime oak and fir timber in roofs and floors, 30 pairs plate-glass sashes and French casements, 30 pairs cill-sashes and fittings, carved Spanish mahogany doors and inst gany folding doors with moulded plate-glass panels, 60 panelled doors, various; 120 squares of sound floor-boards, 5 squares of oak parquet flooring, fine stanmary marble and other chimney-pieces, the handsome stone front with Ionic columns, 19 gallons of stout zinc-work, 200 feet run of Portland plinth, stone staircase, stone landings, steps and rails, 5 50 feet run of iron railing and fencing, cockle ure gates, racks, mangers, and stable fittings, several lots of lead in flats, gutters, and cornices, at pipes, register and other stoves, ranges, force pump, copper bath, brewing copper, cocks, linings and a great variety of useful fixtures and fittings. Also a portion of the valuable TIMBER standing on the Estate.—May be viewed the day previous. Catalogues had of Messrs. HAYMACK & LAMBERT, Auctioneers, 53, Bishopsgate-street; at the Offices of the London and Suburban Land and Building Company, Limited, 70, Fenchurch-street; and of PULLEN HORNE, & EVERSFIELD, 8, Fore street, E.C. and 40, Parliament street, S.W.

BUSHY HEATH, Herts.—FREEHOLD BUILDING LAND.

MESSRS. FURBER & PRICE are instructed to SUBMIT to AUCTION, at the MART, Bartholomew lane, London, on WEDNESDAY, MAY 18th, at TWELVE for ONE, in four lots, 14 Acres of valuable FREEHOLD LAND, affording fine sites for the erection of villa residences, the road being gravelly. Water of the purest quality easily obtained at a short distance from the surface. Church, chapel, and schools are in the immediate neighbourhood, and the premises are situate within a few minutes' walk of the Bushy Heath station on the North London Railway, and within a short distance from the Watford Railway station, which is only 15 minutes' walk from the Bushy Heath station, and can be reached in 20 minutes from Euston-square, Regent's-park, and the most fashionable parts of the metropolis.—Particulars and conditions of sale to be obtained of the principal auctioneers in the neighbourhood; of Messrs. TALBOT & TASKER, Solicitors, 6, Bedford-row, at the Mart; and at the Auction and Estate Offices, in Warwick court, Gray's-inn.

On the Borders of the City of London.—Valuable Freehold Property covering a large extent of ground close to the Metropolitan Station in Farringdon-street.

MESSRS. DEBENHAM & TEWSON will SELL, at the MART, on TUESDAY, MAY 17, at TWELVE, by auction, FREEHOLD PROPERTY, comprising six dwelling-houses, Nos 8 and 9, Cherkenwell-close, and 2, 3, 4, and 5, Bell-yard, with the extensive vaults under the same, the whole covering an area of nearly 8 feet, with frontages to Cherkenwell-close and Bell-yard, and offering a fine site for extensive warehousing or manufacturing premises. The property is at present occupied by five tenants at rentals amounting to about £127 per annum, but is undoubtedly much larger rents, and estimated to produce considerably more as a genuine rental.—Particulars and plans shortly of the Auctioneers, 80, Cheapside.

HAMMERSMITH AND CITY.—Railway Cart Horses.

MR. J. GOWER will SELL by AUCTION, on the WORKS, near Shepherd's Bush green, on MONDAY, MAY 2, 1864, at ONE o'clock, without reserve, by direction of Mr. Robertson, the Engineer and Railway Contractor, Thirty valuable Cart Horses, fifteen strong cob carts, Rubber Carts, Twenty sets of Trull and Chain Harness, the first of which, that have been used on the above line, and in course of completion, the whole nearly completed.—On Saturday first Catalogues had on the Premises; and of the Auctioneer, at his Repository, Barbican.

CHARING-CROSS RAILWAY.—CITY TERMINUS.—TO BUILDERS, CONTRACTORS, PAVIORS, and OTHERS.

MESSRS. WILLIS & HARROW are favoured with instructions from the contractor, to SELL by AUCTION, on the PREMISES, on TUESDAY, MAY 3rd, 1864, at ONE o'clock punctually, the valuable and useful MATERIALS of SIX DWELLING HOUSES, in Upper Thames street and near Queen's yard, and a WAREHOUSE, in Little Scotts' yard, comprising the lead in pipes, gutters, and ridges, plain and pan tiles, and slates in roofs, joists, rafters and battens, doors and frames, sash frames and sashes and fittings up.—May be viewed the day prior and morning of sale, and catalogues had on the Premises; at the Contractor's Office, Worcester-street, Southwark; and of Messrs. WILLIS & HARROW, Auctioneers and Surveyors, 3, Newman's court, Cornhill, E.C. and West Molesey, Kingston, Surrey.

KEYNSHAM BLUE LIAS LIME AND CEMENT WORKS SOMERSET.—The Remaining Stock, Utensils, &c.

MESSRS. FULLER & HORSEY are instructed by the Liquidator of the Keynsham Blue Lias Lime and Cement Company, Limited, to SELL by AUCTION, on FRIDAY MAY 6, 1864, at ELEVEN for TWELVE o'clock precisely, on the PREMISES, Keynsham, 8 miles from Bristol, the remaining STOCK and UTENSILS, comprising 60 tons ground lias lime, 130 tons Scott's patent cement, 4,000 lime and cement sacks, 12 crosskills, 2 horse carts, 6 waggons, 18 sets cart and thill harness, stone trumpets, sack barrows, cement barrels, ladders, portable forge, a Pooley's 7-ton weighbridge with weighhouse, 180 feet iron hurdles, spring cart, box cob, office fittings, and numerous other effects. To be viewed the day previous and morning of sale, when catalogues may be had on the Premises; at the principal hote's in Bristol and Bath; of P. MAYNARD, Esq. Liquidator, 19, Broad street, Chesapide; of Messrs. N. LINDO & SONS, Solicitors, 47a, Moorgate street, E.C.; and of Messrs. FULLER & HORSEY, 13, Billiter street, London, E.C.

MARINE RESIDENCE, with 24 acres of Land, distinguished as Appley House an Improved and Freehold Property on the Coast, at Ryde, Isle of Wight.

MESSRS. FULLER & HORSEY are instructed by the Trustees to SELL by AUCTION, at the MART, London, on WEDNESDAY, JUNE 15, 1864, at TWELVE o'clock, in one lot, APPLEY HOUSE and ESTATE, an important freehold property, situate within a few minutes' walk of the pier, at Ryde, Isle of Wight, possessing singular natural advantages as a residential estate, with undoubted sites for the erection of villas, so greatly in demand in this much-favoured watering-place, and also being now the only land available for such a purpose with a sea view, in close proximity to the main road, from the town of Ryde. The estate is literally within a ring fence, the northern boundary being girt by the sea, and secured by a stone wall, forming an esplanade in front wall, the property consisting of about 24 acres, including the pier. The land here, which rises precipitously, is covered with a thick evergreen plantation, the removal of which would (if desired) enable the owner to build a residence with unsurpassed views for the whole estate, interfering with the privacy or views of the higher portion of the property. The surface of the land is undulating, rising to the house on the north side, sloping towards the south, and there is a spring on a considerable elevation, commanding very extensive and uninterrupted views from Sea-bound Spithead, on the east, extending to Southampton water on the west. The house, which was enlarged and improved by the late owner, is approached by a carriage-drive through a thick evergreen park, with two lodge entrances from the Upper-road, and from the St. Helen's turnpike-road, near St. John's Church.

The internal arrangements comprise a suite of three reception-rooms, well-proportioned dining-room and gentleman's room, numerous principal and secondary bed-chambers and dressing-rooms, bath-room, work room, nursery, very complete domestic offices, with capital arched cellaring, an ample supply of spring water from a deep well, and large underground tanks for soft water. In the front and rear of the house are the north and south lawns, noted for the luxuriance of the myrtles, and other choice shrubs and trees; the whole encircled by a park-like land, studded with stately timber, including many very fine oaks, chestnuts, limes, and elms; the latter towering high and forming, with the rookery established on their branches, a conspicuous object from Ryde Pier. At a short distance from the house are modern stables and farm-buildings, including a dwelling-house for the gardener, stabling for four horses, double coach house, cow-house, cart-house, laundries, potting and fruit rooms, a range of forcing and succession houses, large walled kitchen garden, with choice wall fruit trees and espaliers, and a well-stocked orchard. The Apply road from the northern and western boundary of the estate, and affords a large available frontage, while the land itself contains valuable stone for building and brick earth, and the remarkable and at present inexplicable arch on or Apply Hill need be but little if at all interfered with, by any future building operations under the control of the purchaser. The increasing value of building land at Ryde, abundantly confirmed by the fact that all marketable land has within the last few years been let at high rents for building purposes; the singular natural advantages possessed by this property, no sea frontage, and yet so near to the pier, admit to render this estate deserving attention, either as a speculation alone or continued with the possession of one of the most charming marine residential properties in the Isle of Wight. Printed particulars, with plans, are in course of preparation, and may be had of Messrs. WALLIS, House Agents, and at the Pier Hotel, Ryde, at the Portland Hotel, Weymouth, at the Star Hotel, Portsmouth; of Messrs THOMAS & HOLLAMS, Solicitors, Commercial Buildings, Mincing-lane, London, E.C.; and of Messrs FULLER & HORSEY, Billiter-street, London, E.C. to whom all applications to view the property must be addressed.

PRELIMINARY ANNOUNCEMENT.—Important City Freehold, comprising the Spread Eagle Hotel, Gracechurch street, with extensive Premises and Yard, adapted for rebuilding.

CHINNOCK, GALSWORTHY, & CHINNOCK are instructed to SELL by AUCTION, at the MART, near the Bank of England, in the month of JUNE (of which due notice will be duly given), by private contract, a valuable FREEHOLD PROPERTY, situate as above, very centrally placed, and comprising the principal portion of that well known established HOTEL and TAVERN, the Spread Eagle, with extensive premises and yard, having a back entrance to Leadenhall Market, the whole containing an area of nearly 6 000 square feet, and forming one of the finest and most valuable building sites to be found in the City, its advantageous position rendering it admirably adapted for the erection of offices, wherein a very large rental may be secured, the present rental being an eligible one for the employment of capital.—Particulars may be obtained of O. LUCAS, Esq. Solicitor, 7, Lincoln's-inn-fields; of Messrs WALES & SPARKS, Surveyors, 8, Great Ge Hall, E.C.; at the Mart; and of Messrs. CHINNOCK, GALSWORTHY, & CHINNOCK, Land Agents and Surveyors, 11, Waterloo place, Pall-mall.

VAUXHALL-GARDENS ESTATE, LAMBETH, SURREY.—Valuable FREEHOLD BUILDING LAND, arranged in lots suitable for the erection of Shops, Residences for Tradesmen, and Business Premises; also GROUND RENTS, amounting to £ per annum

MESSRS. DRIVER & CO. are instructed by the Mortgagees, under power of sale, to submit to AUCTION, at the MART, near the Bank of England, on FRIDAY, MAY 20, in lots, as may be determined at the convenience of purchasers, a very valuable FREEHOLD BUILDING LAND, situate in the parish of St. Mary, Lambeth, comprising a considerable portion of the site of the Royal Vauxhall Gardens, and having frontages to Kennington Park, Vauxhall Bridge, and several roads and streets, viz. Black Lion, Kennington, Burrell street, Prince street, Leopold street, Tyler street, and Indian Walk. The Vauxhall Station, on the South-Western Railway, at the River Thames, will be within a few moments' walk of the property, and will afford ample facilities for the transit of goods to and from it; while the Metropolitan Railway, now running together with the South-Western Railway, will bring passengers to the doors of the property. The Royal Vauxhall Tavern and Concert Room, now in full trade, will be sold at the Auction Mart, of Messrs. KEMPSON & HOLLOWAY, on the 31 March next, and Messrs. DRIVER & CO. Surveyors, Land Agents, and Auctioneers, 4, Whitehall, London, S.W.

TO BUILDERS, CONTRACTORS, CARPENTERS, AND OTHERS.—Huge Fine Stock of Stock in Trade and Working Plant.

MR. REYNOLDS, having let the Premises on lease, is instructed by the Proprietor, who is retiring to the country, to SELL by AUCTION, on the PREMISES, Whitelion-street, North Edgate end, WEDNESDAY, MAY 4, and following day, the whole of the extensive STOCK and PLANT, comprising well-seasoned deal and pine planks, also best pine yellow planks, dove and cantern floor boards, oak quartering, lime, and other rods, sawing, bed, and 4 in. deal boards, 30 carpenters' benches, quantity tools various, a builder's hoist, 2 strong carts, a handsome cart, timber trolley, truck, large quantity iron mongery, Turkey and Scotch grits, stairs, floor deals, rosewash, shop front, glazed sashes, and internal fittings, large stone landing, chimney-pieces, and numerous effects, appurtenances to the trade. Also a handsome Bishopsgate street Without

Early Sale, on account of the number of Lots.—To Timber Merchants, Builders, Carpenters, Wheelwrights, and others.

MESSRS. LEREW & LEREW will SELL by AUCTION on the PREMISES, Camden terrace, Camden yellow, white, and red deal planks, deals, and battens, 7,000 feet of wainscot feet of mahogany and oak, three 4 feet Lathe, dry cut stuff, battens, sash-sill-poles, wheeling-planks, ladders, barrows, chimney-pieces, 24 doors, loose materials, &c.—Auction Offices, Cardington-street, Hampstead-road, N.W.

BRIGHTON.—To CONTRACTORS, BUILDERS, and OTHERS.

RIDLEY & POTTER have received instructions from Messrs Clayton & Baker, owing to their dissolution of partnership and relinquishing the Town Contract to SELL by AUCTION, on TUESDAY, MAY 3rd, and NOT THURSDAY, APRIL 28th, 1864, as previously advertised, at TWO o'clock to a minute, on the PREMISES, the Contractor's Yard, Windsor street, North-street, Brighton, the whole of the valuable STOCK, including thirty fresh carts, eight covered going carts, one scavenging van, three broad wheel barrows, stable implements, dust tubs, and scavenging tools.—May be viewed the morning of sale, and catalogues obtained at the Offices of the Auctioneers, 155, North street, Brighton.

WIMBLEDON, SURREY.—Eligible Freehold Building Land.

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the MART, London, on MONDAY, MAY 2nd, at TWELVE for ONE o'clock, in 54 Lots, the fourth portion of the eligible FREEHOLD BUILDING LAND, free of the roads leading to Wimbledon, Putney, Tooting, and Clapham, close to Wimbledon common, and within a short distance of the Wandsworth, Clapham Junction, and Balham Stations, on the South-Western, Victoria Crystal Palace, and Kensington Railways.—Moderate-sized lots, the purchase money may remain on mortgage or contract at 5 per cent. to be paid in nine years by half-yearly instalments; but the whole or any part of the balance may be paid off at any time without notice.—Particulars, plans, and conditions of sale may be obtained at the Auction Mart; of Messrs. RUSSELL & DAVIES, 59, Coleman-street, E.C.; of the Auctioneer, 14, Moorgate street, E.C.; and at the Place of Sale

WANDSWORTH-COMMON, SURREY.—Eligible Freehold Building Land.

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the MART, London, on MONDAY, MAY 2nd, at TWELVE for ONE o'clock, in 54 Lots, the fourth portion of the eligible FREEHOLD BUILDING LAND, free of the roads leading to Wandsworth common, and within a short distance of the Wandsworth, Clapham Junction, and Balham Stations, on the South-Western, Victoria Crystal Palace, and Kensington Railways.—Moderate-sized lots, the purchase money may remain on mortgage or contract at 5 per cent. to be paid in nine years by half-yearly instalments; but the whole or any part of the balance may be paid off at any time without notice.—Particulars, plans, and conditions of sale may be obtained at the Auction Mart; of Messrs. RUSSELL & DAVIES, 59, Coleman-street, London, E.C.; and at the Place of Sale

REDHILL, SURREY.—Eligible Freehold Building Land.

MR. WHITTINGHAM is instructed to SELL by AUCTION at the MART, London, on TUESDAY, MAY 3, at TWELVE for ONE o'clock, in 71 lots, a FURTHER PORTION of the eligible FREEHOLD BUILDING LAND, free of tithe and land tax, situate on the Ridgway road, near to the Royal Oak Inn, and within a few minutes' walk of the Redhill Station on the London, Brighton, and South Coast Railways. Nine-tenths of the purchase money may remain on mortgage or contract at 5 per cent. to be paid in nine years by half-yearly instalments; but the whole or any part of the balance may be paid off at any time without notice.—Particulars, plans, and conditions of sale may be obtained before the sale, at the principal Inns in the neighbourhood; of Mr. THOMAS BUCKLAND, Church street, Reigate; of Messrs. RUSSELL & DAVIES, 59, Coleman-street, E.C.; of the Auctioneer, 14, Moorgate-street, London, E.C.; and at the Place of Sale.

PIMLICO IMPROVEMENTS.—To Builders, Dealers in Materials, and Others.

MR. GEO. HAINES is instructed to SELL by AUCTION, on the PREMISES, on WEDNESDAY and THURSDAY, MAY 21 and 12, at TWELVE precisely, the very excellent MATERIALS of FOURTEEN DWELLING HOUSES and SHOPS, forming Nos. 1 to 15, Rawlings-street, comprising a first-class ENGLISH and FRENCH ROOFING SLATE, lead and zinc, lead and zinc flats and roofs, useful timber, in rafters, plate partitions, wainscots, doors, sashes and frames, fine marble and other chimney pieces, iron railings, fixtures and fittings.—May be viewed.—Catalogues of Messrs HAINES & SON, Moorgate street, City; and at the Auctioneer's Offices, Grosvenor street West, Eaton square, and No. 12, High street, Kensington.

TO PLUMBERS, PAINTERS, and GLAZIERS.—TO BE DISPOSED OF, a BUSINESS, with a well kept good-will, capable of considerable extension, and with convenient premises, in an excellent neighbourhood, six miles from town.—For particulars and terms, apply to Mr JOHN WALLEN, 68, Old Broad street, London, E.C.

TO BUILDERS.—TO BE DISPOSED OF, in the thriving market town of Wantage, Berks (very strong BUILDING and JOBBING BUSINESS, capable of much increase), with or without the valuable Contract for cement-work in and premises, well situated near the canal wharf.—Part of the purchase money may be left on mortgage, if required.—For particulars apply to T. NASH, Wantage.

TO JOURNEYMEN GRAINERS.—A Grainer to the Trade, going abroad, wishes to SELL his CONNEXION, on easy terms, to a good hand. Established seven years.—Address, A. M. Post-office, Camberwell Green.

TO TIMBER MERCHANTS and OTHERS.

HENRY G. WARREN, Hon. Sec.
6, Beaufort-buildings, Strand, W.C. May 2nd, 1864.

MR. AUGUSTUS FRERE finds it necessary to state that his Office is at 22, HENRIETTA STREET, COVENT GARDEN, his address being accidentally mis-stated in the List of Members of the Royal Institute of British Architects.

JUNIOR ATHENÆUM CLUB.—Gentlemen making application to join the Junior Athenæum should accompany the same with References by Noblemen or Gentlemen to whom they are well known, in order that the Committee may be enabled as much as possible in the election of the remaining Original Members. A list of the Committee, with all other information relative to the Junior Athenæum, may be obtained of the Secretary, GEORGE R. WILDING, Esq. F.S.A. at the Committee room, St James's Hall, Regent-street, W.

BILLING'S PATENTS.—CHIMNEY TERMINALS.—THROAT VALVES.—NOTICE to ARCHITECTS. The Proprietors of these PATENTS have given the Whole an Interest in the same, and have consequently reduced the prices of the Articles, trusting that by so doing these useful Inventions may be introduced more generally in all new Buildings.—For prices apply to the Manager, Mr TYLER, 12, Abingdon-street, Westminster, who will also afford any information, he having been for many years engaged with the late Mr. BILLING, in the practical curing of Smoky Chimneys.

ARCHITECTS' BENEVOLENT SOCIETY.
PATRONS.
Sir Robert Smirke. A. J. B. Beresford Hope, Esq.
PRESIDENT—Sydney Smirke, Esq. R.A.
TRUSTEES.
Philip Hardwick, Esq. R.A. | Geo. Gilbert Scott, Esq. R.A.
TREASURER—William Tite, Esq. F.R.S. M.P.
The List of Subscribers and Annual Report is ready to be claimed of the Hon. Secretary. Subscriptions will be received by the Treasurer, WILLIAM TITE, Esq. St. Helen's-place; or by Mr. ALFRED HILL, 33, Tothbridge-street, Baker-road, W.C.
J. TURNER, Hon. Secretary, 15, Wilton-street.

PLATE, SHEET, and CROWN GLASS. T. MILLINGTON'S
New List on Application

LEAD, COLOURS, OILS, VARNISHES. T. MILLINGTON'S
New List on Application.
87, BISHOPSGATE STREET WITHOUT, E.C.

NOTICE.
BROWN & GREEN'S KITCHEN RANGE WAREHOUSE is now REMOVED to the NEW PREMISES, 72–74, Bishopsgate street Within, a few doors from the late Address, at No. 81. These afford accommodation for a still larger stock of the Patent Prize Medal Ranges and Stoves, Register Grates, and Cooking Utensils, to meet the great public demand; and also for the consequent more extensive execution by the manufacturers themselves, of all descriptions of hot water, bath, scullery, and steam work.
72–74, Bishopsgate street Within, November, 1863.

COMPETITIONS.

TO ARCHITECTS.—The Bala College Building Committee hereby give notice that they require PLANS and SPECIFICATIONS for the NEW COLLEGE, &c. about to be erected near Bala, and they offer 50l. for the plan which will be approved of and adopted.—Particulars as to site, accommodation required, maximum cost, &c. to be had on application to the Rev. EDWARD MORGAN, Dyffryn, Merionethshire.

TO ARCHITECTS.—The Visitors of the Cornwall County Asylum are desirous of receiving, on or before the 21st MAY, PLANS and ESTIMATES for BUILDINGS to accommodate 100 Patients. Full particulars of the requirements of the Visitors may be obtained on application to Mr. HICKS, at the Asylum, where Plans of the existing Buildings may be seen. The Visitors do not bind themselves to accept any of the Plans submitted to them
April 23, 1864.

SOUTH PETHERTON GAS and COKE COMPANY.—To ENGINEERS, BUILDERS, CONTRACTORS, &c.—The Directors of the above Company are prepared to receive PLANS and SPECIFICATIONS for GAS WORKS and BUILDINGS, and TENDERS for the Erection of the same, including a Cottage with two rooms on the ground floor, and one bedroom, laying the mains, and all other necessary works. The site which is to be provided for the works is about 2½ feet in length and 167 feet in breadth, but the Company do not want to be restricted to that space if more be necessary for the convenient erection of the works and cottage. The streets proposed to be lighted are about 1¼ yards in length, and about 40 town lights will be required. The precise number of private lights will be about 240. The Plans, Specifications, and Tenders to be addressed to the Secretary, on or before the 12th day of MAY next.
P. CLARKE, Secretary.
Dated, South Petherton, April 19 h, 1864.

TO ARCHITECTS.—The Directors of the Durham County Permanent Investment Land and Building Society hereby offer the following PRIZES for the best DESIGNS for WORKING MEN'S COTTAGES:—
FIRST PRIZE ..... 10 Guineas.
SECOND PRIZE 5
The Cottages to contain three and four rooms respectively, and the cost not to exceed 100l. per Cottage. Prices of labour and materials in the county of Durham will be furnished on application to the undersigned. The Architects should keep in view the following qualities:—1. Accommodation; 2. Ventilation and Sanitary arrangement; 3. Style of Elevation; 4. Cost; and 5. Stability. All designs will remain the absolute property of the Society. Wilfrid Cruzier, Esq. C.E. County Architect; Mr. Alderman Williams, Chairman of the Sanitary Committee, Sunderland Corporation; and Mr. Joseph Robey, Building surveyor, have kindly undertaken to adjudicate the prizes for the two best designs. The designs are to be sent to the General Manager, sealed and endorsed "Designs for Working Men's Cottages," on or before the 30th JUNE next, marked with a motto, and with sealed envelope containing architect's address.
SAMUEL WOODHOUSE, General Manager.
Offices, 28, Fawcett-street, Sunderland, Apr. 21, 1864.

CONTRACTS.

TO BUILDERS or CONTRACTORS.—The Directors of the Great Western and Brentford Railway Company are prepared to receive TENDERS for the CONSTRUCTION of about 300 lineal yards of BRICK WALLING, about 127 lineal yards of BRICK DRAIN, and about 60 lineal yards of TIMBER WHARFING, near to the Brentford Dock. Working drawings and specifications can be seen at the Office of the Engineer, E. P. MURRAY, Esq. 37, Great George street, Westminster, on and after the 28th instant. Tenders addressed to the Secretary of the Company must be delivered at the Company's Offices, on or before the 2nd instant. The Directors do not bind themselves to accept the lowest or any Tender.—By order.
27, Great George-street, Westminster, S.W. May 5th, 1864.

CONTRACTS.

NOTICE to WELL-BORERS, &c.—TENDERS are required for BORING to a greater depth the WAR DEPARTMENT WELL at Sheerness.

RTON'S PATENT PRIZE MEDAL STABLE FITTINGS.

SUPERIOR-CLASS STABLE FITTINGS are PATRONIZED by the PRINCIPAL NOBILITY, and ADOPTED by many of the FIRST ARCHITECTS and BUILDERS of the United Kingdom.

BY APPOINTMENT TO H. R. H. THE PRINCE OF WALES.

BARTON, having entered upon the extensive Premises, No 370 Oxford street, adjoining his Patent Stable Fitting Manufactory, begs to call attention to his large and well-selected STOCK of STABLE and LOOSE-BOX FITTINGS, HARNESS ROOM REQUISITES, &c., also to invite inspection of the newly-erected Practical Stable, now on view. Illustrated Catalogues on receipt of Four Stamps.

JAMES BARTON, IRON WORKS, 370, OXFORD STREET, LONDON, W.

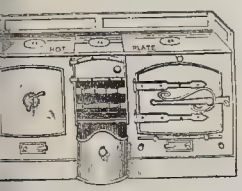
EXHIBITION PRIZE MEDAL, 1862, AND MEDAL OF ROYAL AGRICULTURAL SOCIETIES OF ENGLAND AND IRELAND.

USGRAVE'S PATENT STABLE and HARNESS FITTINGS.

MUSGRAVE'S PATENT HARMLESS LOOSE BOXES.

MUSGRAVE'S PATENT IRON COW STALLS and PIGGERIES.

Architects who have not seen these fittings are requested to write for engravings, as they are unlike those of any other maker, and were admitted to excel all the work of their class in the Exhibition.



They can be seen in first-class stables in almost every county in England; and MUSGRAVE, BROTHERS, are now fitting several very large establishments under direction of London architects, noted for employing only what is the best of its kind.

Musgrave's Patent Slow-combustion Stove

Is the nearest approach to Warming by Hot Water. It will burn in churches from Saturday till Sunday evening, without attention during the hours of worship. In halls will burn day and night for weeks, with little care. Capable of warming a large apartment for twenty-four hours, at a cost of 3d.; and deserving of special attention because of its safety, healthfulness, durability, and extreme simplicity.—For full particulars apply to

MUSGRAVE, BROTHERS, Ann-street Ironworks, Belfast.

THE LEAMINGTON PRIZE KITCHENER.

These Ranges are strongly recommended for Economy, Cleanliness, and a Cure for Smoky Chimneys.

The Top forms an entire and efficient Hot Plate, and having an Open Fire, removes all the objections of a Close Fire-range.

A large STOCK of SELF-ACTING and other RANGES, REGISTER STOVES, and every description of BUILDERS' IRONMONGERY, at Wholesale Prices.

All Goods delivered free within Five Miles.

BURT & POTTS,

WHOLESALE AND MANUFACTURING IRONMONGERS,

38 and 65, York-street, Westminster.

BROWN & GREEN'S

PATENT KITCHEN RANGES.

PRIZE MEDAL, 1862.

These Ranges combine the latest improvements with great simplicity and durability. They afford facility for roasting meat in front of a fire without interruption to the action of the oven, hot plate, boiler, &c. The Ovens are well ventilated, and perfect either as roasters, or for baking bread or pastry. For Efficiency, Economy, and Ventilation, and

CURE OF SMOKY CHIMNEYS,

these Ranges are unequalled. They are of all sizes and prices; and when fitted with Bath and Steam Apparatus, &c they form the most complete appointment for good establishments. Designs, &c. may be had on application at THE LONDON WAREHOUSE,

72—74, BISHOPSGATE STREET WITHIN.

"One of the best arrangements of the 'Kitchener.'"—See *Builder*, Sept. 6, 1862.

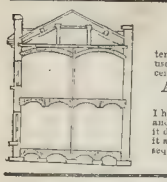
WHOLESALE IRONMONGERS,

13, KING STREET, SNOW HILL, LONDON.

NUT PLATE.

We invite particular attention to the PATENT LOCK FURNITURE, which we do not hesitate to say is the most perfect article now manufactured, great improvements having been recently made in it. It has been extensively used in Public and Private Buildings, in Her Majesty's Pavilion and Camp at Aldershott—alone, many hundred sets without one single failure. It is applicable to all Locks and Latches, both Rim and Mortise, and effects a most secure fastening, without any screw in the neck of the knob. Perfect action guaranteed in both Locks and Furniture, if the Locks are of our own manufacture.

New rich Designs in Glass, China, Brass, Bronzed, Gilt, Carved Woods, Inlaid, &c. &c. or to any Design.



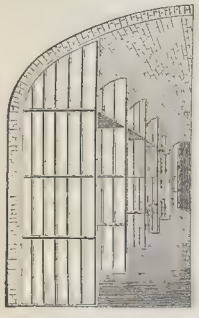
THIS FURNITURE MAY BE HAD WITH PLATES OR NUTS.

A most complete and extensive stock of every description of Locks, Latches, Brass Foundry, and Ironmongery, required for Buildings, of the best quality manufacture, at the lowest wholesale prices.

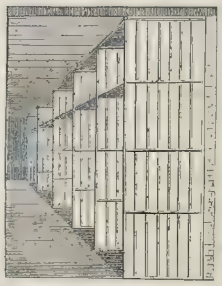
*** Illustrations and Particulars sent on application.

WAREHOUSES FOR NAILS, PIPES, GUTTERS, &c. IN ST. JOHN'S COURT.

THE DENNETT ARCH.



Allowed to be the cheapest fireproof construction known, and used with the greatest success for the last ten years in the Midland Counties, and has been adopted by G. G. Scott, esq. for the New Foreign Offices, used in any form of arch, groin or dome; turned to any breath, width, or height, forming a perfect floor and ceiling in one mass, from 25 inches in the crown to any required thickness.



Address to the Patentees,—A. & R. DENNETT & CO. NOTTINGHAM.

TESTIMONIAL. "I have made use of Messrs. Dennett & Co.'s material for Fireproof Arching, and though I have, by [illegible] and the practical experience of its efficiency as against fire, I can bear witness to its strength and extreme convenience of application. I have made use of it in positions in which I should have found it difficult to introduce any other fireproof material, and it has this advantage, that through a coarse, metal or it are so entirely in one mass that they cover the space like a compact shell or inverted basin, and are, consequently, almost wholly free from lateral pressure.

"GEO. GILBERT SCOTT, 20, Spring Gardens London"

WROUGHT IRON WINE BINS.

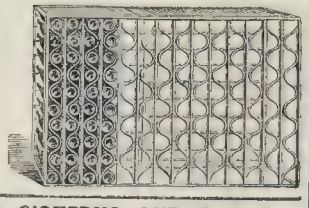
FARROW & JACKSON

Beg to call the attention of Architects and Builders to their Wrought Iron Wine Bins, which are ADAPTED (as shown) either for BRICK ARCHED VAULTS or CELLARS with FLAT CEILINGS, the mode of fixing in either case being so simple, that they may be put up by any ordinary workman. They combine great strength with lightness and economy of space, and their DURABILITY has been satisfactorily PROVED DURING nearly FORTY YEARS.

The Shelves are formed of Plates of Iron laid on Bars, which rest on the Cross-bars of the Lattice Uprights, and are removable at pleasure.

Plans and Estimates furnished, and Cellars fitted complete in any part of the Kingdom.

*** As these Bins were the invention of the late Mr. FARROW, and great attention has been given to them by the present Firm, long practical experience enables FARROW & JACKSON to offer the best advice as to arrangement.



ALSO THEIR

NEW REGISTERED IRON BINS,

Made any size or shape, to fit any spare corner, with SEPARATE REST FOR EACH BOTTLE,

Peculiarly adapted for Private Cellars.

No laths are required, and all trouble of Binning is avoided. The Cellular Bins may also be had fitted with light lattice doors, affording perfect security to the contents of the Bin.

was awarded to J. H. BOOBBYER, at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails (wrought and cut), Copper and Zinc; Patent Locks of all description, Chains, Glass, and Wood Furniture of all kinds, with Patent Shoot-bolt Spindles; Dr. Arnott's Ventilators 4s.; and the New Registered Venetian Ventilator, so much admired 6s. 6d. each.

J. H. BOOBBYER (late STURCH & BOOBBYER), established nearly 270 years, for the supply of GOODS of the BEST MANUFACTURE at the LOWEST PRICE.

14, Stanhope-street, Newcastle-street, Strand, London, W.C.

SMOKY CHIMNEYS,

S. DEACON

Respectfully invites the attention of Architects Builders, &c. to his

PATENT LOUVRE CHIMNEY CAP,

which has been in use some time with perfect success, many curing chimneys where other caps have been of no avail.

The advantages attending this Cap are—it can be thoroughly cleaned by the machine when the chimney is swept, the brush being able to pass through the Cap without the liability of misplacing it; an increased up-current, and the impossibility of a down one.

Prospectus, with testimonials, forwarded on receipt of Postage stamp, by

S. DEACON,

59, ALMA STREET, HOXTON, N.

MANUFACTORY:

HEMSWORTH STREET, SAINT JOHN'S ROAD, HOXTON, LONDON, N.

NAILS and IRONMONGERY

from BIRMINGHAM direct

Builders, Contractors, and Others, supplied with Nails Iron, and Ironmongery of every description, at the LOWEST BIRMINGHAM PRICES.

A complete List of which will be forwarded upon application to

FRANCIS BIANCHI (late Blyth & Bianchi),

Nail Manufacturer and General Factor, BIRMINGHAM, and 15, Gresham-street, London, E.C.

RAIN WATER PIPES, GUTTERS, &c.

Rain Water Pipes....	2½-in.	10d.	3-in.	1s. 0d. per yard
Eaves Gutter.....	3½-in.	6½d.	4-in.	0s. 6½d. "
G G Gutter.....	4-in.	11d.	4½-in.	1s. 0d. "

Sash Weights, heavy..... 5s. 0d. per cwt.

Ditto light ..... 5s. 6d. "

ST. PANCRAS IRON WORK COMPANY,

LD SAINT PANCRAS ROAD, AND YORK ROAD, KING'S CROSS.

WINDOW BLINDS.

VENETIANS, SPANISH, FLORENTINE, Patent "Helio-Scene," Wire, Zinc, Awnings, Door-blinds, Spring-rollers, Blind Ticks, Webs, and every article in the blind trade, manufactured expressly for the trade, on liberal terms.

R. LOWTHER & CO.

WORKS—SOUTH LAMBETH and VAUXHALL.

OFFICES—31, REGENT STREET.

THE INTERNATIONAL EXHIBITION PRIZE MEDAL, AWARDED 1862.

ESTABLISHED 1744.

AUSTIN'S IMPERIAL PATENT SASH

and BLIND LINES

To BUILDERS, CARPENTERS and BLIND MAKERS.

J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his

IMPERIAL PATENT FLAX SASH-LINES,

of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.

They can be obtained of all Rope-makers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country

LIGHTNING CONDUCTORS.

R. S. NEWALL & CO. Patentees of the COPPER ROPE LIGHTNING CONDUCTOR, supply the same, with the point and all staples, complete for fixing, at the following prices:—

Three-eighths-inch diameter.....	1s. 0d. per foot.
Half-inch diameter	1s. 6d. "
Five-eighths-inch diameter	2s. 0d. "

R. S. Newall & Co.'s Patent Copper Rope Lightning Conductor is being applied by architects, engineers, and scientific men, in all parts of the world.

Offices—130, Strand, London.

" Gateshead-on-Tyne

" 17, South Castle-street, Liverpool

" Exchange Buildings, Dundee.

" 7, Frederick-street, Aberdeen.

BUILDINGS AND SHIPS EFFECTUALLY SECURED AGAINST LIGHTNING.

PATENT LIGHTNING CONDUCTORS,

according to the system of Sir Snow Harris, F.R.S. as now universally adopted in every department of the Public Service, supplied and carefully fitted in every detail, under the immediate instructions of Sir Snow Harris; by C. W. GRAY, who has effectually secured a large number of ships, public buildings, and magazines against the destructive agency of lightning, including the Houses of Parliament, magazines, afloat and on shore, of the War Department, and many churches and other important structures. Buildings surveyed, and plans and estimates submitted, if called for.

J. W. GRAY & SON, 114, Fenchurch-street, E.C.

PROTECTION from LIGHTNING.

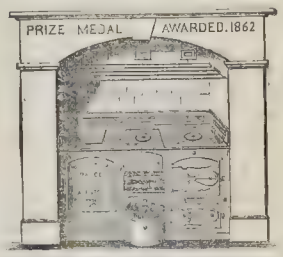
HART & SON

Beg to call the attention of Architects, Builders, and the public to their

IMPROVED LIGHTNING CONDUCTORS

(SPRATT'S PATENT),

As presenting the MOST EFFECTIVE MEANS of OBTAINING SECURITY from LIGHTNING. They are economical, easily fixed, and APPLICABLE TO SHIPS and TO ALL BUILDINGS, including Private Houses, Churches, Chimney-Shafts, Dairies, Powder Magazines, &c. &c.



Price lists and estimates on application.

HART & SON,

WHOLESALE AND MANUFACTURING IRONMONGERS,

53 to 58, WYCH ST. STRAND, LONDON, W.C.

PATENT WORCESTERSHIRE RANGE.

PRIZE MEDAL 1862, AWARDED FOR EXCELLENCE.

The above RANGE is most complete, and strongly recommended for its unrivalled ECONOMY, CLEANLINESS, CONVENIENCE, DURABILITY, and is a certain CURE for SMOKY CHIMNEYS.

It is an entirely new invention, and consists of large MEAT ROASTER, PASTRY OVEN, and WROUGHT IRON BOILER. The top forms a HOT PLATE for BOILING, STEWING, &c. The whole heated by ONE SMALL FIRE. One 3 feet wide is equal to an ordinary Range 8 feet wide.

Extracted from the "London Daily Telegraph," May 19th, 1862.

"INTERNATIONAL EXHIBITION, Class 31.

"Of the most recent inventions it should be said that Messrs. JONES & ROWE'S Patent Worcestershire Range has attracted very special attention, and has been commended by the best authorities. A valuable peculiarity of their Ranges is the placing of the OVEN and ROASTER one above the other instead of *side* by *side*; and the ROASTER is constantly replenished with fuel.

Lists of Prices at the Quarries and Depôts, also Cost of Transit to all parts of the Kingdom, forwarded on application to BATH FREESTONE WORKS, BOX, NEAR CHIPPENHAM, WILTS.

TO BUILDERS.

STONE! MARBLE! STONE!

THE CHEAPEST HOUSE IN LONDON FOR MARBLE AND STONE CHIMNEY PIECES.

MESSRS. BRINE & CO.

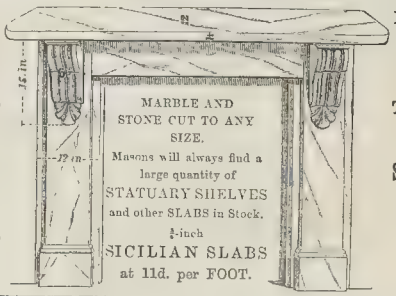
135, EUSTON ROAD, ST. PANCRAS.

Box Stone Chimney Pieces.....from 6s. to 9s.
Marble ditto ..... 28s. to 32s.
Truss Marble Chimney Pieces .....from 50s. to 70s.
Truss Stone ditto ..... 12s. to 18s.
Sheet of Designs sent free on application. Estimates for every description of Masonry.

ARCHITECTS, BUILDERS, MERCHANTS, SHIPPERS, AND MASONS

Will find that the CHEAPEST HOUSE in LONDON for the following Goods is at the

EMPORIUM, J. W. BIRD & CO.'s, 143½ and 145, EUSTON ROAD, N.W.



BOX STONE CHIMNEY PIECES
for 5s. 6d.
Truss ditto ditto, 11s. 9d.

MONUMENTS AND TABLETS
in great variety, equally low in price.

MASONS' WORK OF ALL KINDS CONTRACTED FOR,
AND EXECUTED WITH DESPATCH IN TOWN OR COUNTRY.

A STOCK OF
500 CHIMNEY PIECES
always to choose from.

PRICE LIST ON APPLICATION.

MARBLE BOX CHIMNEY PIECE
for £1 5s.
First-class Bed-room ditto, £1 10s.

FIRST-CLASS
TRUSS MARBLE CHIMNEY PIECES
from £2 5s. to £3 5s.

A WELL-CARVED
STATUARY CHIMNEY PIECE,
with 13½-inch Piers,
suitable for a Drawing-room, which must be seen to be believed,
FOR THE SUM OF £6.
Net Prompt Cash.

PRICE LIST ON APPLICATION.

VIEILLE MONTAGNE ZINC.

THE ITALIAN-FORMED ZINC is much approved of by Architects and Engineers on account of its strength, durability, and appearance. On account of the light framing required, roofs, including framework and fixing, can be covered with it FOR £3 PER SQUARE up to 25 feet span. Sheds of larger span, including posts, *4l.* per square. Architects are cautioned against allowing anything thinner than No. 13 gauge (20 oz.) to be used. ALL PLATES SHOULD BE REJECTED NOT BEARING, in addition to the Company's name, the words "ROOFING ZINC," and the gauge.

OLD ZINC RETAKEN AT HALF THE MARKET PRICE OF NEW.

For Designs and Estimates for Roofs, with Timber or Iron Framework, IRON CHURCHES COVERED WITH ZINC, and Buildings for the Colonies, apply to

THE COMPANY'S SURVEYOR,
12, MANCHESTER BUILDINGS, WESTMINSTER, S.W.

JAMES W. TYLER, CONTRACTOR FOR DEVAUX'S VIEILLE MONTAGNE THICK ZINC ROOFING,

ON IMPROVED PRINCIPLES.

12, ABINGDON STREET, and 4, WOOD STREET, WESTMINSTER, close to Victoria Tower.

Estimates furnished for every description of Zinc Roofing and Guttering, inclusive or exclusive of Timber or Iron Framing, in all parts of England
Having for several years been actively employed in laying DEVAUX'S THICK ROOFING ZINC (the purest extant) upon the new principles introduced by Mr. Edmeston, Mr. TYLER can refer with confidence to work done as his best recommendation
Good Zinc badly laid will still be a failure, for there is much more importance in the mode of laying than is yet generally known; and parties who will entrust their work to Mr. TYLER will find that this last point is thoroughly attended to, and at no extra cost.
This Zinc thus laid is quite as lasting as lead, if the woodwork is arranged according to Mr. TYLER'S directions.

THE LAND SECURITIES COMPANY

VULCANIZED INDIA-RUBBER WORKS, GOSWELL MEWS, GOSWELL ROAD (opposite Spencer-street), LONDON E.C.

TO ARCHITECTS, BUILDERS, and OTHERS.—All who want really Good MODELLING done by the Advertiser, who was awarded a National Medallion for correctness of drawing and modelling by the Science and Art Department; also an Exhibitor in the pre ent Exhibition, No. 9, Conduit street, Regent-street. Address, P. P. care of Mr John Stannard, No. 17, Godfrey's-row, Shacklewell green, West Hackney.

TO BUILDERS, ROAD CONTRACTORS, and OTHERS.—SAND and BALLAST.—FOR SALE, in small or large quantities, 60,000 yards of excellent clean, sharp PIT SAND and BALLAST, fit for all building purposes, concrete, and roads. The pits is contiguous to the North-London Railway, to which truck access may be obtained.—For prices and particulars apply to Mr. JAMES S. BONNY, Land Agent, Camden-town, N.W.

TO BUILDERS.—FOR SALE, a quantity of BATS, lying at the Railway-station, Grays, Essex.—Apply, Mr. THOS. GILBERT, Grays.

GUTTA-PERCHA MILL-BANDS.—The Gutta Percha Company beg to state that the increasing demand for the Gutta Percha Straps for Driving Bands, Lathestraps, &c. fully justifies the strong recommendations they have everywhere received. Their durability and strength, permanent contractibility and uniformity of substance; their non susceptability of injury from contact with oils, grease, acids, alkalies, or water; and the facility with which the only Joint required can be made in bands of from 200 to 300 feet long, render them superior to leather for almost all working purposes, and decidedly more economical. Every variety of Gutta-Percha Articles, such as Tubing, Soles, Pump-buckets, Fire-buckets, Bosses, Union Joints, Packs, Bottles, Bowls, Toilet-trays, Curtain-rings, Galvanic Batteries, Talbotype Trays, &c. &c. manufactured by the Gutta-Percha Company, and sold by their Wholesale Dealers in town and country.
THE GUTTA-PERCHA COMPANY, PATENTEES, WHARF ROAD, CITY ROAD, LONDON.

The Builder.

VOL. XXII.—No. 1109.

The Royal Academy Exhibition.

PARTICULARLY pleasing it must be to some of our best known and ablest painters to hear so frequently as they do how little the temporary withdrawal of their assistance to it affects the prosperity of an institution, the present reality of which is supposed partly to exist in them; and how safely they may trust in others to support a character not so easily earned formerly as it now is,—perhaps.

Justice calls for a remembrance of the absent as well as acknowledgment of whatever claims the immediately visible may demand: and with no unreasonable wish to moot it, there can be very little doubt left in the minds of those who give consideration to the matter, and care to ask themselves the question, that the present collection does *not* reach the average point of attractiveness of an ordinary Royal Academy Exhibition, let some of the critics say what they may. The members themselves were never less conspicuously represented; and those upon whom has devolved for some time past the honour of supporting, to a great extent, its "*prestige*," — in fact, the younger and rising professors, who, from constant association, are almost considered a part of it,—though showing no deterioration or slackened industry,—have not been fortunate in selecting themes whereon to exercise their abilities, and consequently excite no proportionate amount of interest for a vast outlay of hard work and school knowledge.

Putting aside two most remarkable instances for exception—Sir Edwin Landseer's wonderful epitome of all the dread and supposition that can deter future Arctic explorement; and Mr. John Phillip's admirable Spanish episode,—there is little to impress a strong recollection upon the most retentive memory. The prevailing deduction must be, that to attain the very considerable amount of power manifest in innumerable instances, must monopolize all the attention and intention of our painters, leaving no time for consideration of how they may most advantageously expend it, until at last they become very misers of manipulation,—if they can be called such who make no secret of their hoard,—and love the coin for the coin's sake, and not for that of which it puts them within reach.

However, to repress anything like a feeling of dissatisfaction, heightened by disappointment at not finding some half-dozen achievements that rumour had asserted were forthcoming to enhance the value of this year's collection, we very gladly recognise in (51) "La Gloria: a Spanish Wake," J. Phillip, R.A., a production of such superlative excellence as will atone for much: painted as well as he always paints,—and he is of those few to whom pencil and palette are as pen and ink to the many,—means of expression in an extra-fine handwriting. The subject is one of the most sympathetic, as well as fruitful, he could possibly have chosen. The pet of a gipsy tribe has suddenly died; suddenly, apparently, from the little we see of the round face, with no signs of the alteration that would betoken long ailment; and with the national superstition of certain glory awaiting one so early called, the bereaved are endeavouring to persuade themselves; and less successfully still the poor, beautiful, woe-stricken mother, whose instincts rebel at the assumption, that they ought to rejoice at, rather than deplore, the severance: women with swimming eyes are singing gay melodies, accompanying the dancers, who, more mindful of the necessities of life, are amusing the crowd. It would require a chapter, and a long one, to dilate fully upon the qualities that distinguish this production, which may be fairly classed with the best of all schools, not only for colour and perfect execution, but for unaffected sentiment and dramatic force.

If it were desirable to point a moral and prove the worth of selection, of quality above quantity, and how unlimited is the power of cultivated genius, where could be found a more cogent exponent than Sir Edwin Landseer's (163) "Man proposes, God disposes?" It shows how small means may be made to tend to a great end. There is more human interest attached to this singular epic, more eloquent appeal to sensibility in this representation of two hideous polar-bears, than in most of the attempts at narrative with less ugly actors; as, sprawling over the slippery lumps of ice in their ravenous haste to discover what man's effort has failed in discovering,—the wherewithal to keep life and body together,—they painfully illustrate, besides the maxim that gives its name to the picture, the proverb that one creature's loss is another's gain, and much more for reflection.

Accepting Mr. F. Leighton's classic treatment of (194) "Dante in Exile" as the right one, it must be pronounced to be a noble picture, and a most praiseworthy application of natural gifts, as well as acquired power; though it may be objected, by those who prefer the warmth and animation of reality, that this power is made too subservient to an excessive love of elegance. (217) "Orpheus and Eurydice" and (293) "Golden Hours," by the same, are, like many preceding them, very charming in their super-elegance; rather inanimate, but not lacking warmth of a kind.

With nothing more important from Mr. Millais, R.A. elect, to contest their excellence, his portraits of children will sufficiently sustain his high reputation, and justify his late election to the full honours of the Royal Academy; they are painted with so much combined vigour and delicacy. (13) "My Second Sermon" will challenge favourable comparison with its prototype; and if the poor little duchess did succumb to its soporific influences, and behave not quite so well as on the first occasion, affection is more secured than ever, for the world does not care much for *very* good little people. (289) "Leisure Hours" is another exquisite portrait picture—the children a little over-dressed. And what a lovely little bit of natural childlikeness (176) "The New Dress," by Mr. J. C. Horsley, A., presents. Such truthfulness is seldom found accompanied by the refinement that distinguishes this realization. (100) "Within the Convent Walls" will not add greatly to the fame Mr. A. Elmore, R.A., enjoys as a depictor of nunnery life and nuns. So many far prettier specimens have emanated from him, and some so pre-eminently less presentable from other sources, that success would appear to depend entirely upon the extremes, and to have no chance in the mean. (424) "Excelsior," by the same, evinces in some degree his characteristic and beautiful method of painting, but has no recommendation beyond that which a half-length study of his, bearing any title, would be certain to possess.

We break off that we may at once look at the—

ARCHITECTURAL DRAWINGS.

The architectural drawings this year, are only sixty-two in number; but as most of them are large, they cover the amount of space which has of late years been appropriated to "Architecture," that is to say, about half of the south room. Indeed, last year, there were only forty-seven architectural drawings in the catalogue.

The practice of placing close to the ceiling and floor, these drawings, which require minute examination, is still maintained. Amongst the works are some which could be regarded as highly meritorious pictorially, but leaving unsettled the question how far the pictorial or polychromatic, as prominent in architectural drawings, retards by its substitution the appreciation on the part of the public, of the real art-architectural.

Amongst the more striking drawings, are views illustrative of some of the designs for the Albert Memorial in Hyde Park, which were exhibited in the Royal Gallery in the Westminster Palace, and one other design for the Memorial. Mr. C. Barry contributes (759) his "General View," showing "the proposed treatment of the entire site." For this treatment, his design was happily conceived. The building itself was to be cruciform in plan, with a dome. The end of the transept appears roofed in semicircular form, and as having a circular window. The details have a Byzantine character. No. 778 is an interior view of the same designed building, and shows a semicircular vault, with ornament, and subjects in panels, painted on a gold ground, columns of coloured marbles, and the monument at the end. Mr. E. M. Barry's design, shown by a view (768) of the exterior, and one (790) of the interior, was for a structure of four pilas-traded and turret-crowned piers, and four arches, carrying a dome, the panels of which were to be filled in with green and yellow tiles. The inner dome, or rather cove, carrying a balustrade, was to be richly decorated in colour; whilst on the inside of the outer dome, a painted representation of a procession was to be seen from below. Within this structure, the statue was to be placed. Sedent figures were to be attached to the pedestal of the statue; whilst in each re-entering angle of the structure was to be a winged figure. The design submitted by Mr. P. C. Hardwick is here exhibited in two drawings by Mr. F. P. Cockerell. One of them (802), shows the general arrangement of the site, with terrace-gardens and accessories; and the other (796), the statue itself, with the pedestal and subordinate sculpture, of which there is a profusion. The statue of the Prince would have been gilt: the other sculpture would have been bronze, with gold background apparently; a dado and plinth would have been of red marble, and the mouldings of white marble. That the effect here expected could be permanent in the open air, is very doubtful. In bronze alone, the London statues fail sadly. Mr. Cockerell's work in the drawing of sculpture, and the classical ornamentation of accessories of a building, shows that he is worthy of his name. In the general arrangement, effect of the group would have been diminished by contrast with the expanse of terraces. Mr. Scott, though he does not exhibit his accepted design for the monument, shows in several drawings his "Hall of Science," "one of the alternative designs offered" for the Memorial (776, & 779 to 781). In general arrangement, the building is simply four semicircles on plan, connected with a central space, which is covered by a dome, and surrounded by an ambulatory or cloister, to which are attached a porch and some other accessories. The windows are all round-arched, with shafts and sub-arches. The general details are a mixture of Early French,

Lombardic, and Byzantine. The dome, however, which is pointed, helps to give to the design somewhat the character of an Indian tomb. The sectional view of the interior of the building, displays some excellent ornamentation in colour and gold.

The last design for the Memorial, to which we alluded, is by Mr. Fergusson. Its main features are a structure of four arches, on a general square plan, crowned by a dome; and four smaller structures, also domed, but each having the entablature and dome carried by square piers or *antæ*. The arrangement thus far described, resembles that of the design of Mr. E. M. Barry. The details, however, are very different; and they have that attribute which not merely is not inconsistent with the highest merit, but must necessarily pertain to the art we desiderate, namely, that they cannot be easily described in words. We may say however that the arches being semicircular, and having nook-shafts, and ornamentation in the "orders" of the heads, show that the designer has made some use of Norman and Lombardic examples. Each angle of the building is splayed and moulded, and has a nook-shaft which carries two truss-formed projections, breaking the cornice; which therefore overhangs slightly, and not exactly so as to reconcile us to a splayed form of the angle as contrasted with usual rectangular form. However, the trusses and angle of the cornice, considered apart from the overhanging, are the best features of the design. The dome, of masonry, has some effective ornamentation of moulded ribs and horizontal lines. It is terminated by a finial, resembling that of the monument of Lysicrates, which bears an allegorical figure. Coloured marbles are profusely employed, as in the shafts; and the sculpture of the frieze has a blue background. These backgrounds, if painted, are not worth two years' purchase in the London atmosphere: witness the case of the British Museum pediment, and the more recent painting of the frieze of the Athenæum Club, which no one could now discover to have been painted some very few years since. Square piers in the four small domed-structures are placed one at each angle, and two others in each front, each one next to the angle. Novel ornamentation may be found in these smaller structures, as in the central shrine; but there is something wanting in the proportions of parts, which it is easier to recognise than describe. Generally, Mr. Fergusson has succeeded in showing, supposing that to be his object, that there is no reason why details in new works, should be simply reproduced; but he has at the same time allowed us to see that the teaching of old models could have contributed much to his design, and led to higher appreciation of result.

The conspicuous drawing in the room is Mr. Scott's "Design for the New Foreign and Indian Offices, as in the style desired by the Architect" (786). This drawing, Mr. Scott has made his diploma work "deposited in the Academy on his election as an Academician." As drawing, we must say it is not worthy to be compared with the drawings which Mr. Scott sent in the original competition. It is splashily coloured. However, the intention in the details can be made out. The architect has done well to leave on record his original ideas. Could the opinion of enlightened posterity, upon the design carried into effect and the design which was only made, and upon the whole affair of the Government Offices, be expressed, we should be amused; and "the authorities" in these matters might be benefited. Without saying whether the design should have been Gothic, or of another character, we apprehend that the details of the building now in progress are not improving as the work goes up. There are faults in them which, Italian though the style be, the study of *Gothic* architecture should have made impossible. In the design in the Academy, on the other hand, the architect is evidently master of his details; and, were we to accept the choice of Gothic, there would be little to displease us, except the form of the termination of the tower with saddle-back roof, wherein Mr. Scott always seems to us uncouth as well as unmoulded.

The most important subject illustrated in the Architectural Room, however, is the Thames Embankment. Mr. Bazalgette, who last year exhibited views showing proposed arrangements of the steam-boat piers, and of the gardens in front of the Adelphi, this year shows us four drawings (762, 763, 788, & 797) all of steam-boat piers or landing-stairs. Those of the designs which are for the same piers as he exhibited designs for, last year, are modified, and in accordance with our views as to some important particulars.* But they are yet sadly deficient, and even more than they were, in art; and must be considered as not at all worthy of the positions and the opportunity, and not calculated to contribute to the architectural character of London. In the steam-boat piers at Waterloo Bridge, one above the bridge and the other below, Mr. Bazalgette has united the piers and the embankment with the arch, instead of having the piers connected with one another, through the arch, by the roadway, as was the objectionable arrangement of last year. Moreover, pedestals all now support something. But whilst correcting certain defects which we specified, he has done nothing else to give a character of art to the piers and landing-stages. It is not sufficient to introduce sculpture, and to place for the support of each group, a blank cube of granite: but there is positively nothing more than this sort of treatment in the Waterloo Bridge piers. In the design for the Temple steam-boat pier and landing-stairs, there is just enough design in one portion of the balustrading, with the supports for candelabræ, to explain the difference between architectural art and absence of it. Also there is some ornamentation, though not of a high class, to pedestals; and to parts of the embankment or steps, by lions' heads and rings. But the centre of the composition is a gateway not a bit different to what may be seen in any book of tasteless designs of the end of the last century. The steam-boat pier at Westminster Bridge, though plainer than the others, seems likely to be in the best taste. The character of the mouldings at the Westminster Palace-terrace and landing-stairs appears to be repeated in it. "York Gate," at present standing at the end of Buckingham-street, will be removed, and rebuilt, "arranged to form an entrance to landing-stairs between Westminster and Charing-cross Bridges." A square landing will be placed in front of the centre of the gate, having steps right and left, and carried by an arch; but comparing what is shown in the drawing, with the ruined platform or steps on the river bank, we fear that difference will be found from features that originally conduced to the effect of the whole highly-estimated example of Inigo Jones's talent.

Mr. E. M. Barry, besides the drawings we have mentioned, has several others. Amongst them is a view (767) of "Proposed New Refreshment-rooms for the House of Commons." The room shown, has a central waggon-headed wooden vault springing from a cornice-moulding, carried by hammer-beams, rising from wooden shafts between the windows. The spaces between the timbers are coloured blue. The same architect exhibits a view of his Charing-cross Hotel, now erecting (777). The drawing does not make the red terra-cotta shafts to the chimneys so prominent as they are in the structure itself. The building has five stories between the pavilions of the ends, besides two stories with dormer-windows in the roof. The top story of all appears to have a continuous balcony, or deep gutter, the face of which is ornamented in party-colour. The details, in a modified Italian form, are some of them very good, whilst others are not so. Good features, besides those of the chimneys, are the deep recession of the window openings of the pavilions, and the nail-head ornamentation at intervals in the brickwork. Defects of the building are the use of cement for many of the members intended to be decorative, and the unsightly feature of each porch of entrance, a segmental arch to the centre opening, carried by columns. Spire-capped square turrets to the angles of the pavilions, and larger quadrangular masses with very high-pitched roofing, are features in this design; as they are becoming in many buildings of the day. Generally, as an experiment in decorative application of different materials, terra-cotta especially, the building will deserve particular attention. The Cross to be erected in front of the hotel and station entrance, and intended to be a "restoration of Charing Cross," is not shown in this view; but it is the subject of another drawing (807). This latter is not put forward by the architect, as displaying more than general effect: the details have been considered in preparing the working drawings, and will no doubt be found in some parts earlier in character of date than details in the exhibited view. In general character and details the work may be said to resemble most, Waltham Cross. Certain red granite shafts and panels, shown in the drawing, are now to be omitted. Although we have no doubt that the work will, in Mr. Barry's able hands, be a reproduction of Charing Cross, or as nearly so as is possible, we question the advantage of such reproduction, in the interests of art. Until it be recognised that each new structure should have *something* new in its decorative features, or that otherwise the work cannot be one of art-architectural, we shall make little way. Besides, here, an element of confusion will be brought into the topography and street-nomenclature of London. There will be two rather distant localities called Charing Cross, one the space and a portion of street in front of King Charles's Statue, and the other the space in front of the hotel. Another drawing by Mr. Barry (801) shows the Star and Garter Hotel, Richmond, as it will be, altered, and with the addition that is being made. Here there is a centre of four stories, of alternately arch-headed and square-headed windows, between two square spire-capped masses, and bow-fronted wings. In the centre there are two tiers of dormers in the roof, but in the ends of the building a regular story is substituted for the lower tier of dormers. The chimneys are important features: they are pilastraded in several tiers; and the character of Italian has some of the features of Jacobean as they are in Longleat. Of other new hotels there are two illustrations. Mr. J. Murray shows a view of the Tunbridge Wells Hotel (793). It has a square pavilion at each angle; and each pavilion is terminated by four angle-turrets, and a central *belvidere* story. There is a colonnade to the ground-story, between the wings; and the general character is Italian. A drawing (804) of Mr. Knightley's design for the Cavendish Hotel, Eastbourne, shows that it also will be of Italian character, but with an extended frontage, comprising a central and end pavilions, the latter terminated each by a lantern story or *belvidere*.

Some works of importance in one respect or other, considering the future architectural character of London, remain for notice. The chief of them is (795), "The Ludgate Bridge, now being erected for the London, Chatham, and Dover Railway Company; Joseph Cubitt and F. T. Turner, engineers." The drawing is exhibited by Mr. J. Taylor, jun. The design affords good evidence in addition to that which we have already had, that iron girder-bridges may be made slightly, and, indeed, ornamental. The ends of the girder here are carried by bold cantilevers; and coats of arms are placed on the sides, separating ornamentation of the middle portion of the girder, from the plainer treatment which is that of the ends where strength would seem to be required. Mr. Taylor, in the several stations of the line, has shown the public (if it looks), the advantage, with little cost, of taste, and of the employment of an architect. As the drawing is, of the Ludgate Bridge, the view of St. Paul's is not interfered with. Messrs. Ordish & Le Feuvre exhibit (783), their design for "Proposed High level Railway Bridge and Viaduct over the Thames, to connect the northern and southern railways below bridge." This design is a modification of the ordinary suspension-principle, by the introduction of obliquely placed chains, each suspending from the tower, or pier, a point in the length of the roadway distant from the pier about two thirds of the span, and themselves suspended intermediately by perpendicular rods from the catenary.

Two drawings are exhibited by Mr. T. Cundy, jun., showing "Projected improvements upon the Pimlico estates of the Marquis of Westminster," one (760) being "Lower Grosvenor Gardens," "looking north from Belgrave Place," and the other (761) "Upper Grosvenor Gardens," "looking south from Grosvenor Place." The Marquis of Westminster is understood to be desirous of improving the decorative character of buildings on his estate; and there is ample room for improvement. Mr. Cundy, we are told, had photographed a plan of the proposed improvements on another view; but this, for want of space, was not hung.

Mr. J. Murray exhibits a drawing (756) of the "Mansion for Sir Samuel Morton Peto, bart., M.P., Kensington Gardens." All that we can make out, in the elevated position in which the drawing is hung, is that the building is Italian. Next to it is a view (757) of a mansion recently erected near Geneva, by Mr. G. H. Stokes. It appears to be Italian of different character. Amongst the features are strings of flowers suspended on the piers. In the same top-line, is a drawing (754) of "Dundarave Hall, Lancashire," and one (755) of "Clervaux House, Hampshire,"

* *Vide* page 327 in last volume.

both by Mr. J. P. Jones, and Gothic in character. The first, in red brick and stone, seems to have round arches in addition to the high-pitched roofs. The other building, of grey and white stone, and with tiled roofs, appears to have both round and pointed arches.

We have mentioned one design for a bridge of wide span. There is a drawing (771) of the "Bridge in course of construction over the river Mersey, at Runcorn, for the London and North-Western Railway," designed by Mr. W. Baker. We can remember a project for a bridge over the Mersey at Runcorn being mentioned many years ago; and we remember what was deemed the absurdity of the idea. But at that time, the various forms of wrought-and-riveted iron and tubular girders had not been invented; and neither the Menai, nor the St. Lawrence, had been crossed by a railway-train. As well as we can make out, the girder here is of the lattice-form: there are three central spans of the iron-construction, and six arches of masonry or brickwork on one side, the piers founded under water, and four next the opposite shore. Mr. G. G. Page exhibits (805) his "design for the Carlisle Bridge, Dublin." The drawing shows a wide flat span of arch, in iron. On the abutments are pedestals with equestrian statues.

We must dismiss in a sentence, Mr. T. C. Sorby's "The New Town-hall, Bromley" (770), a red brick and stone Gothic structure, erecting for Mr. Coles Child; Mr. W. Wilkinson's "Interior of the New Library at the University Union Society's building" (774), Gothic, with waggon-headed vault, the principal ribs ornamented by perforation to the casing, and with iron-work supports to the gallery, brilliant in blue and gold; Mr. M. D. Wyatt's "Saloon lately erected for Messrs. Purdie & Cowton, 314, Oxford-street" (769), which is effectively lighted through the cove; and the same architects' "Original Study for the New Staircase at Compton Wynniatts, Warwickshire" (811); Mr. P. C. Hardwick's "South-east View of the House to be erected at Rendcomb, Gloucestershire, for Sir E. A. Goldsmid, bart., M.P." (775), ordinary Italian, and below the architect's powers; Mr. S. S. Teulon's "Bestwood, in the county of Nottingham, now in progress of erection" (806) for the Duke of St. Albans, illustrated in our last volume, and looking very red now as coloured, in the drawing; and Mr. G. Sykes's designs (813 & 814) for decorating portions of the north end of the gallery in the South Court of the South Kensington Museum. Mr. Prichard's "Design for a Mansion, about to be built for Señor Don Manuel M. Gonzalez, at Jerez de la Frontera, in the South of Spain" (785) is Gothic of a peculiar character. Pointed arches, Saracenic seemingly, predominate; but *loggie*, boldly corbelled balconies, battlements, an octagonal tower, and a very bold flight of steps, are important features in the design. Also Gothic, but of very different character, is Mr. C. E. Giles's "Hagley, South Carolina" (809), "a design for a house, with private chapel." An octagonal, balconied and spire-capped, structure, with a porch projecting from it, is the main feature.

Two of the designs for the New Exchange Building, Liverpool, are represented at the Academy. One drawing (794) is an external view of the design by Mr. W. J. Green. This design is evidently of superior excellence. It may be said to combine the Venetian Italian, as of Sansovino, with French and Greek elements. High-pitched roofs, and square domical-capped angle turrets, are chief features. The other drawing (803) by Mr. T. H. Wyatt, is an interior view of the News Room. It seems to differ somewhat from his drawing in the Conduit-street Exhibition, explanatory of the design to which the first premium was awarded. In the Academy drawing, the room is shown surrounded by columns, and pilasters, with shafts of coloured marble, bearing arches, and having the height of the arcade divided by a gallery: above the arches, in a cove, are lunettes with sculpture; and from the centre of the flat ceiling rises a domical light.

Mr. R. P. Spiers exhibits a view (789) illustrating the "Design for the Vestibule and Staircase of a Royal Palace," which obtained the Academy medal; but as coloured, it is less pleasing than the drawing in the exhibition in Conduit-street. Mr. W. V. Pickett turns up once more, with a "Series of Designs" (797*) in his "system of iron architecture" concerning which he has wasted some ingenuity. The designs are valuable chiefly as showing that, whilst it may be necessary to consider and not contradict facts of the properties of materials, which heretofore we have taken great pains to show, such expression of harmony is not enough, and that bulk and the idea of strength involved therein, besides breadth of surface, whereon light and shade may have their effect, are essential to the monumental. It is easy for an enthusiast to convince himself of truth of his theory, by shutting out of consideration half the premises. That sort of mistaken course has been long retarding the advancement of architecture and decorative art.

Mr. J. Drayton Wyatt exhibits a drawing (799) of a work of historic interest, "The Tomb of Queen Katherine Parr in Sudeley Castle Chapel, Gloucestershire, being part of the restorations, &c., lately completed there" for Mr. J. C. Dent, by Mr. Scott. The figure, recumbent on an altar-tomb, is placed in a recess decorated with an ogee canopy.

Mr. Ashpitel, who last year exhibited a drawing of the Basilica of Constantine and Maxentius restored from a very old plan among the MSS. discovered by the Prince Consort in the Royal Library, Windsor, has this year, a view (800) of the interior, restored from the same authority; and he mentions that the building covered more than three times the space of Westminster Hall, and was half as high again. The coffers divided by the angle of the groin, so that one-half the coffer is in one severy and the other half in the other, have a strange appearance. Can there be authority for this arrangement?

In former years, church-architecture contributed the larger number of drawings to the Academy exhibition. This year, there are few works of the class. One of the most important of the subjects is "St. James's Church, Calcutta," in course of erection, by Mr. C. G. Wray, which is shown in an exterior view (758) and an interior (782). The details may be described as of plain Early English character; but internally the decoration of the roof-trusses is Geometric-Decorated. The general plan is cruciform, with a western porch and turrets, and a wide porch to each transept. In the usual position of aisles there is an open cloister on the ground-story, and a gallery above, which is lighted by windows, to be closed by *louvres* or Venetian blinds. Mr. T. H. Wyatt exhibits a small perspective view (764) of his church at Fonthill; one (765) of a church at Pembroke, and one (766) of the church of St. Katherine's. Each one of them is of Early Decorated Gothic character. Mr. Street exhibits (808) "The Crimean Memorial Church, now in course of erection at Constantinople," after many changes of intention, ending, it now appears, in rejection of Mr. Burges's design. Mr. Street's design, judging from the exterior, is not equal to the design for which he received a premium, or indeed worthy of him. No. 773 shows a design by Mr. J. L. Pearson, for "proposed sculpture and incised decoration of the narthex of St. Peter's, Vauxhall," where the figures are white on red ground. The only drawing which seems left to be named is Mr. Pearson's "Interior of a Church now building" (810) at Appleton-le-Moors, near Pickering, by Mrs. Shepherd, "in memory to her husband." With the common plan and carved work, it displays ornamentation by coloured bands, which is all the more satisfactory because cool in tone, and has incised work of figures similar to that shown in his other drawing.

THE ARCHITECTURE OF INDIA.

CAN ITS FEATURES BE SUCCESSFULLY BLENDED WITH EUROPEAN STYLES?

IT would appear singular, were it not explainable by very obvious facts, that the ancient architecture of India should exhibit closer analogies with the European styles, both Classic and Mediæval, than does the style of Egypt, though belonging to a country which, comparatively speaking, may be considered a closely neighbouring one. These remarks especially apply even to the cave-temples of Ellora, produced under similar circumstances, and upon a similar scale with the cave-temples of Egypt. Yet, while the architecture at Ellora immediately suggests comparison with that of the crypts of our own early cathedrals, the style of the Egyptian works of the same class does not call up any association of the kind, but appears at once distinct and strange—an utterly foreign language of art, presenting no relation whatever with our European Gothic, of any date. The explanation of this apparent discrepancy is to be found in the chronology of the question, the great solvent which may be applied to almost all difficulties in the history of art, though often presenting considerable complications.

In order to explain why the distant art of ancient India more closely resembles that of Europe than does the more neighbouring Egyptian style, a very brief chronological survey will be sufficient. The Egyptians were the earliest people, of whom any record remains, who developed what may be termed a definite school of art. In sculpture as well as architecture the school of Egyptian art, after having seized upon the leading features of natural forms, and thoroughly appreciated their chief characters, and accurately understood their relative proportions, adopted their main outline only. This outline was refined, sharpened, and eventually reduced to set conventional forms, agreeable to the eye-culture of the Egyptian artist; but never *filled up*. In sculpture, the indication of the muscles was never added to the outline of the main form, in the limbs of the human figure. Nor, in architecture, were the *details* of the lotus or other plants, forming the floral decorations of columns and their capitals, ever added to the main external outline. It would almost seem as though the Egyptians had been only furnished with the shadows of objects to study from, and so would only seize the *silhouette*, or general mass of the object, with its terminal outline, without any of the details of those portions of the object not defined by the shape of the shadow. This simile must, however, not be too severely applied. Having once defined the style of art they first aimed at, a peculiar quality of the Egyptian mind caused it to remain obstinately stationary at a certain degree of development, producing that cold though grand severity in Egyptian works, which keeps them distinct from all other styles of art. This feature in Egyptian art resulted chiefly from the character of the people, as moulded by a theocracy, whose religious and political principles, being closely bound together, were necessarily unchangeable. And Egyptian art may, therefore, be strictly termed dogmatic art, as not admitting of either innovation or cavil; but to be practised from father to son by a race of hereditary architects and sculptors, who easily learnt the limited range of those orthodox forms, which were not to be departed from. As the race of priests learned the dogmas of the national religion, so the sculptor, architect, and painter learned the equally severe dogmas of art; and a departure from either would have been considered an equal heresy. A State art went hand in hand with a State religion.

The neighbouring school of art which most closely resembled the Egyptian was that of Greece, in its earliest attempts at refinement. In sculpture, especially, there are Greek remains which exhibit wonderfully strong affinities with the Egyptian school, from which those refinements were evidently derived; but then, Greek art was not encumbered by the dogmatic dictates of an all-powerful theocracy, and, therefore, worked out an eventual development of its own. In an Eastern direction, Assyrian art evidently owed much in its beginnings to that of Egypt,—a region which was then evidently the very core of the spirit of civilization, as Western Europe is now. The sculptors of Assyria, in adopting those principles which they could learn of their Egyptian brethren in the accurate seizure of the grand outlines of natural objects, appear to have followed the somewhat freer treatment found in the mural paintings of Egypt than the severer forms of the sculptures; while, in the figures of their richly-treated bas-reliefs, they soon added the delineations of the muscles to the main outlines,—not in that delicate and truly artistic manner afterwards developed by the Greeks; but with an over-marked and over-emphatic treatment, which is the characteristic of Assyrian art, dealing in exaggerations both of detail and proportion; while, in the Egyptian works, even when colossal, nothing ever seems exaggerated or over-emphasised. This disposition to profusion of detail and exaggerated emphasis is the natural course of unfettered art, at a certain period of its development; and it would doubtless have occurred in Egyptian art itself could it have received the stimulus of foreign superiority or rivalry without being crushed, as the art of Egypt eventually was, by foreign invasion and domination.

Assyrian art was doubtless the first step towards that kind of ancient Indian art with which we are best acquainted, and which, whether any national Indian style worthy of

the name of art preceded it or not, is, in the main, the earliest kind of art produced by the Indian races of which any examples remain.* It was through Assyrian art that the modifications afterwards produced under the subsequent ascendency of Persia were created, in which many of the special forms distinguishing the architecture of India were first developed,—such as the bracketed capital—the slender column, enriched at certain distances by bands of ornament—the deep and decorative base, made as important as the capital—and, perhaps, also the pointed arch, varied by many varieties of outline and enrichment. Hence the national Indian architecture, as we know it, was derived originally from the Egyptian, through the medium of the Assyrian and Persian styles, after several successive modifications, and more especially *complications*, which are the necessary consequence of long-continued development when accompanied by successive foreign influences; through all of which, however, both the sculptured caves of Ellora and the temples of the Ganges have preserved strong hereditary lineaments of those monuments of Egyptian greatness which still excite the wonder of the art-student on the banks of the Nile.

Our own Mediæval architecture, derived in a similar manner and by a similar process from the same parentage, has necessarily more affinity with the features of styles contemporaneous with its own, and derived from the same source, than with the features of their original and mutual parent; and this is rendered the more plain when we consider that the course of Egyptian art-influence in the West was entirely analogous to that worked out in the East. The Greek and Roman schools of art, though later styles, exactly corresponded in method of development with the Assyrian; introducing, especially in the Roman period, more abundant detail, and a sumptuous though yet severe kind of richness of general treatment. The Byzantine, taken as the next Western modification, corresponded in degree (though not in time) with that of Persia in the East, exhibiting greater intricacy of parts and more elaborate finish, but losing more and more of the original colossal grandeur as well as simplicity of the parent style. Then grew up, in successive phases, the various modifications called Gothic, exhibiting all that intricacy, extravagant profusion of ornament, and structural complication which likewise distinguish the Mediæval structures of India. Here, then, we have clearly established, not only the affinity between the early architecture of England and that of far distant India, as greater than that between English art and that of the comparatively neighbouring Egypt; but also the cause of that affinity, which could not, without entirely changing the course of art history, be otherwise than it is.

It should, however, be observed, that as among the forms and details of the Doric temples, many strikingly distinctive features were retained, which mark the still remaining influence of a national architecture, of the timber-building period —before the existence of Egyptian influence,— and which continued after it;—so, in India, in a few of the very oldest known monuments, similar traces of an original national architecture—very distinct from that of Greece, but also belonging to a rude timber-building period,—are plainly evident; and it is, in fact, the engrafting of these features on imported styles of a more advanced character, or rather, perhaps, their retention as still inherent features, that produces from age to age those well-defined and distinct national styles which, TOGETHER, but not separately, should form the study of the modern architect.

After these preliminary observations, an examination of some of the more remarkable examples of Indian architecture may be advantageously entered upon with the view of ascertaining whether, or not, they present features, details, and even general characteristics, akin to our own national styles, which, treated in our own national feeling, might be skilfully grafted on our existing methods of structure and decoration; serving as one of the means of getting out of the humiliating rut of that merely servile reproduction which is so unwholesomely checking the advance of our young architects, whose works display a vigour that, if not cabined and confined by the trammels of imitation, and the superstitious belief in existing "authorities," would perhaps lead to great results,—and that rapidly.

* A few examples, however, exist, which possibly belong to a primæval Indian style, and which will be referred to in the course of this paper.

The examples it is proposed to examine with this purpose in view are to be found in the magnificent collection of Indian drawings, by Mr. Simpson, now exhibiting at the German Gallery, in Old Bond-street, and already mentioned in these pages. They have been reviewed also by almost every organ of the press, which tends to render them more generally known; and so all the better suited as examples to illustrate the theories put forward in the present essay.

The first example to be referred to is one which, in all probability, exhibits the characteristics of an original Indian architecture, belonging to a time immediately following the timber-building period,—a time preceding the importation of those foreign influences which have produced the more recent styles. This example (No. 22 in the catalogue of the drawings) represents the gateway of the Bhilsa Tope, possibly one of the oldest architectural edifices in India, occupying the summit of a hill covered with Buddhist remains. According to Cunningham, as quoted by Mr. Simpson in his catalogue, who opened the tope some years ago, the period of its erection may date as far back as 443 B.C. These topes can scarcely be considered in the light of temples, as they appear rather to be gigantic reliquaries, in which were preserved objects of religious veneration, too sacred for the eye of the worshipper, there being no entrance to the interior cells in which the relics were deposited; the form of adoration consisting in the circumambulation of the building, and the muttering of certain prayers. For this purpose a paved passage-way surrounding the temple-shrine was provided; the passage being inclosed by an external fence, now existing, which, from its peculiar character, forms the subject of the present remarks. This fence, with its four gates, is entirely constructed of stone, though exhibiting all the primæval forms of a wooden stockade, of somewhat elaborate character; one of the peculiarities being a series of transverse rails mortised into the upright ones. In the stone structure, such forms as would have existed in the wood are still accurately carried out, even to the mortising. The huge blocks of stone thus mortised, which form a striking link between the widely-distinct epochs of timber and of stone architecture, are most elaborately decorated with intricate sculptures. Of the four original gates to the inclosure of this tope, only two remain perfect, one of which forms the subject of the drawing under description. The general effect of this entrance may be compared to that of the framework of a great Tudor window, but with the cross stanchions nearly as numerous as the upright ones, forming a number of oblong square openings.

The lower portion of this stone framework seems to be removed to form the gateway, while the upper part remains a fixture, beneath which the worshippers pass, as under a vast four-barred gate, or portcullis, suspended above them. At the period when such stockades or inclosures were of their original material, wood, the lower part of these entrances was, no doubt, made to open, gatewise, or to slide up like a portcullis; and, possibly, the first stone adaptations of these forms were similarly arranged, as remains of stone and marble gates of ancient workmanship are not uncommon in the East. Whether such was the case in the present monument our recollection of Mr. Simpson's drawing does not enable us to determine; or whether bronze gates, long since the booty of foreign spoilers, were fitted in below the heading just described. However this may be, the true way of carrying out the design in the present monument would have been to have the lower portion of the composition of this striking entrance also constructed of stone, formed of upright and transverse stanchions, and opening and shutting by means of gigantic pivots, working in sockets, instead of hinges. The present aspect of the remains of these gates is very singular and striking, the richness of the sculptured details rescuing the effect from that appearance of barbaric rudeness which its likeness to cross-timber work of very primitive character might otherwise suggest. The primeval posts on each side have, indeed, under their architect's hands, become most elaborately enriched columns, the capitals of which are formed of different animals, among the most characteristic of which are elephants, wrought with a skill and character truly surprising. From the external side of these capitals figures stand out laterally, or bracketwise, supporting the short continuations of the lowermost of the transverse stanchions, which extend beyond the upright ones. The transverse stanchions of the upper part of these gateways terminate in this manner, as they are above the level of the rest of the continuous fence, and are, consequently, cut off at a short distance beyond the external uprights, to which they are mortised. Human figures, as stated, project from the capitals of the piers or columns, and support the lower of these projections, while animals, standing in the intermediate spaces of the projecting stanchions, support the upper ones. The bracket-like support projecting from the column on the left of this gate, is a most gracefully-designed female figure, full of a rich Oriental elegance, which (if it has not been heightened by our modern artist in his beautiful drawing) must be considered very remarkable in so ancient a work. The entire surface of these gateways is elaborately carved with emblems of Buddha, and figures of various descriptions connected with what may be termed the ritual of the Tope or Dhagopa. But any written description of this most singular and characteristic stone fence and gateway can but suggest to the architectural student vague ideas connected with the early development of Indian art and the application of general principles in an original and picturesque manner. To form an accurate idea of what the structure may suggest in actual practice, the monument itself, or, at least, Mr. Simpson's beautiful drawing, ought to be seen and carefully examined.

The next examples of Indian architecture in this collection belong to a later period, and are those which correspond to the different early stages of our own Mediæval architecture. In the representations of the Golden Temple, at Benares, the present centre of existing Hindooism in India, good examples of the bracket capital may be studied. In the drawing, No. 18, capitals, formed of four brackets, the angles between them being filled with rich bosses of ornament, produce a sumptuous and appropriate effect. In the case of columns above which two beams meet and intersect, the four projecting brackets fulfil a seemingly necessary function, and appear to spread forth their support, armlike, in a picturesque and effective manner to each beam, on its arrival and departure from its temporary station. In No. 19 there are examples of columns of somewhat Egyptian proportions, and even Egyptian-like decoration, but of a more minute and profuse character, founding, by combination, a distinct and new style, as suggested in the preliminary observations. But the most striking examples of the bracket capital occur in the Vihara or cave-temple at Ajunta. These are only double-bracketed capitals, the double brackets extending on each side to near twice the diameter of the shaft, and nearly meeting those of the next column; producing, when the line of columns is seen, in front, and from a certain distance, the effect of a series of flattened arches, constructed upon some entirely novel principle.

Another cave-temple at Ajunta (No. 48) is very remarkable for the general richness and completeness of its details, and especially to be distinguished by its lofty arched instead of flat roof, cut out of the solid rock, but made to imitate such a roof as it would appear if constructed of wood. This is another and much later example of the lingering predilection to continue the old sacred forms of the primeval wooden structures, though the material come into general use was stone, the capacities and general structural qualities of which were so different. In the Buddhist cave at Karli this feeling for the characteristic forms of the old wooden structures is exhibited in a still more curious manner, the ribs of the roof being actually of wood, *fastened on*. Considerations arising out of these pertinacious struggles to imitate artificially, in stone, the forms naturally occurring in wooden structures, must lead us to be cautious in joining the outcry against so-called "shams;" inasmuch as we see in some of these Indian temples imitations of wood, in stone, producing highly successful results;—a principle which we also find exhibited in the classic Dorian temple of the Greeks, in which all the most characteristic details are stone imitations of wood-work. The interior of this temple (No. 48) is also very remarkable for the excessive enrichment of all the columns of the church-like nave, as well as for the elaborate frieze above, formed of a series of decorative niches, in which are seen, alternately, sitting and standing, figures of Buddha.

The Dhumar Lena cave-temple offers a good example of that kind of columnar supports, short and massive, which are one of the more ordinary characteristics of these works. In the present in-

stance they are formed, to about half their height, of a square shaft of great diameter, either decorated or plain, and with or without a plain or decorated square base. The upper part of the square shaft resolves itself into a capital of peculiarly Indian character,—a character not found in any other school of architectural art. It somewhat resembles a rather squat vase, enriched with ascending and descending flutings, meeting in a central ridge, and other enrichments; but, while its form is so unusual, it is yet, evidently enough, a decoration designed expressly to form the ornamental head of a columnar support, and for no other purpose. The shaft and capital together of this example are a decidedly successful form of columnar support; and plainly point the way to the conclusion that a servile adherence to Classic proportions, or even Gothic ones, need not constitute the sole standards of architectural beauty or strength, nor be accepted as the embodiment of principles from which all departure is dangerous.

Another example of supports of this kind, closely analogous in the principle of their general design to the short massive columns of the crypts of early European cathedrals, is exhibited in the view of the Lanka Cave at Ellora. But while their general principles of design are the same, they are altogether distinct in their details, both of external outline and the feeling and distribution of their ornamentation. Thus showing how unnecessary it is to adhere strictly to the pure columnar form, short or long, thin or thick, which is nearly always followed in the squat and massive supports of our crypts, which have, almost always,—whatever their proportions and decorations,—the shaft, base, and capital, of the Classic column more or less strictly defined; while in the analogous supports of the Lanka Cave, however, the mere columnar feature almost entirely disappears, giving place to a sort of decorative turret. The lower portion of this device is composed, like that of the Dhumar Lena cave, of a square shaft, which, being shorter, is rather a block, or pedestal, resting upon a strongly-moulded decorative base, the base and block together not forming above half the entire height. From the block, richly decorated at its angles, rises a slightly-tapering cone, very profusely ornamented, which is surmounted by a mass, of depressed spheroidal form, having a sharp ridge at its widest part, with decorated flutings above and below, meeting at the ridge; and this upper portion of the supporting turret forms a feature precisely analogous to the capital of a short, massive column. Notwithstanding the distinct character of both the main and minor features of the supports under description, they have a general family likeness and evident relationship to the dwarf columns of our crypts; and it is evident that, by modifying the feeling of the ornamentation, both in subject and treatment, in such a way as to stamp it with a modern European character, a freshness of form, a novelty of proportion, and a different distribution in the arrangement of the ornamentation, might be obtained through the medium of this ancient architecture of India to form the basis of a new style; at all events, the basis for a starting-point towards a more original code of architectural ideas.

To pass from the characteristics of massive dwarf supports to the strongly-contrasting feature of very tall and slender ones, we shall find a graceful example in the delicate columns of the dome of the old Jain Temple of Ajmere, in Rajpootana. This is one of the most ancient and best preserved of the works of the Hindoo period, and one of the completest monuments of its class. The columns are as slender as the slenderest of our Gothic columns of the thirteenth century, though standing singly,—while with us columns of such proportion usually stand in clusters. These Indian columns represent a corresponding architectural phase to that which developed itself with us at the end of the twelfth and throughout the thirteenth century; but, possessing decidedly distinguishing features in their evident, though gradual, tapering from base to summit, and in having, instead of the mere rings of moulding which occur in our thirteenth century columns, a similar number of projecting bands of much more important character, almost approaching in effect the successive galleries of Turkish minarets,—a feature which might be made much of in modern church architecture.

Among the later specimens of Indian art as influenced after the Mahomedan invasion, is the famous Taj at Agra, the tomb of Noormahal, the favourite wife of the Shah Jehan, which travellers generally agree in ranking among the finest buildings in the world. This should not be passed over without notice. It presents many suggestive features for architectural study; the more so as the details of the ornaments bear evidence of European origin, more or less strongly pronounced, which yet have quite a distinct and original character, showing what a vast amount of originality of a certain kind may be obtained by "treatment" alone;—such a kind of treatment as might be applied to all the details of our Gothic cathedrals under the modifications of modern genius of the true architectural type; while the servile reproductions which are being carried out, even as to the varied details of "handling," do not point the way to any real advance.

Several other examples of Indian architecture among Mr. Simpson's beautiful collection of drawings possess equally suggestive features with those referred to in this paper; especially some timber-work analogous to the Swiss style, or that of our timber houses of the fifteenth century, hinting at new and pleasing features; but the present article has already occupied more than its share of space.

THE INTERIOR OF A GOTHIC MINSTER.*

IN addressing you upon the subject of the interior of a Gothic minster I feel like the man in the Eastern story, who conjured the Genius of more than colossal dimensions kindly to recompose himself within his moderately-sized jar, so large are the materials and so short the limits of a lecture: in one respect, however, I will endeavour to secure your approval, in consulting your patience by brevity and conciseness.

The word "minster" I use in the following observations in its largest sense, embracing the cathedral, conventual, and collegiate churches; and if some points appear omitted from consideration, the reason will be found in the fact that they were treated on in my paper on Church and Conventual Arrangement, read before the Royal Institute of British Architects, and since published by Messrs. Atchley & Co.

Upon first entering a minster, the impression now is very different from that produced in Mediæval times, when colour was freely used. The red and blue draperies, the shining gold backgrounds common in Mediæval pictures, were intended for churches having such gorgeously-painted walls and pillars, and fainter colours would have appeared weak or been completely lost when submitted to the glowing streams of light which flowed from windows dyed with azure, ruby, and amber.

At St. Alban's we discover traces of successive stages of mural enrichment; representation of joints of masonry in the thirteenth century; rich diapering of the fourteenth, in imitation of stained glass; and in the fifteenth, scriptural or legendary illustrations. At Rochester, the shafts and arches were painted red, green, and yellow: the whole face of the stonework was filled with the same tint, not distinguishing the moulding, both in the nave and transept. At Carlisle, the choir pillars were painted white, and diapered with red roses nearly a foot in diameter, with a gold monogram, I. H. C. or J. M., of the fifteenth century. In Conrad's "glorious choir" of Canterbury the vault was painted like a sky. At Peterborough, the old Norman ceiling—and an imitation of the time of Abbot Wheathampstead, at St. Alban's,—and one at Bolton of the Early Tudor period, are good specimens of their style, to which the labours of Mr. L'Estrange and Gambier Parry will add another at Ely. At Winchester the hooks remain above the base arcade on which the superb suits of tapestry were hung on solemn occasions. At Chichester, the remarkable wall-paintings in the south wing of the transepts, made by Bernardi for Bishop Sherborne, are, I fear, irreparably injured: some were wholly destroyed by the calamitous fall of the tower and spire. At Canterbury, Winchester, St. Alban's, Durham, Exeter, Rochester, Carlisle, and Westminster, we can still point to specimens of mural ornament; and at Exeter, in the panels of the screen, to thirteen oil paintings of the time of Charles I.; and still later—of the date 1728—to some figures in distemper, by Damiani, in the north wing of the choir transept of Lincoln.

The Nave.—The nave was used for the passage of processions and for preaching. The time at my disposal permits me merely to mention that most of the Orders had their peculiar arrangement, the Benedictines preserving the area of their naves clear of the parish church found in those of the Austin Canons; and the Cistercians, holding aloof from the presence of any but of their own body, and exhibiting a stern simplicity, in striking contrast to the sumptuousness of the Clugniac — the Præmonstratensian churches, were usually small and irregular,—and the friars' naves long and narrow, with ordinarily a single aisle for the brethren at sermon-time, and a choir separated from approach by a central tower. But no positive law can be laid down for a certain discrimination at first sight, so frequent are the exceptional instances. Whilst from their constitution the Austin Canons of Thornton, Carlisle, and Christchurch, and the Secular Canons at Hereford and Chichester, left the naves open for the parish altar; the Benedictines, who, at Rochester, Westminster, Chester, St. Alban's, and other places, built a separate parish church, yet tolerated it within the nave at Bodmin and Tynemouth. At Romsey the Benedictine nuns, as at Marrick, allotted the north nave aisle to the townspeople, while they occupied that on the south; and at Romsey the raised step of the platform remained till recently for their stalls. At Lincoln, Bishop Sutton removed the parishioners of St. Mary Magdalene out of the nave. In order to give still further relief at Chichester and Scarborough, and with less uniformity at Manchester, side chapels were erected externally to the nave aisles: for the same reason a large chapel at York, and a church of St. Cross at Ely, were appended on the north, and at Rochester and Waltham, on the south of the nave.

In the nave stood the *pulpit*, which appears to have been moveable, as it ought to be again, after the roodloft was deserted for it. The stationary structures of stone, as at Worcester, 1504, Wells, sixteenth century, and Ripon are not earlier (nor were those of Norwich or Exeter now lost) than the Perpendicular period, and were copied from the refectory and open-air examples, such as those of Beaulieu, Chester, or Magdalen College, Oxford. In most of our cathedrals this traditional use of the nave was observed: at St. David's the pulpit stood in it until 1844. The pulpits of Winchester and Bristol are of wood, and the sixteenth century; that of Hereford Elizabethan, and of the same material. That of Lichfield was the gift of Bishop Hacket. In several instances the naves were very inconveniently blocked up: at Canterbury the south aisle only was available for the public.

At Durham, the Lady Chapel blocks the west front. It contained an iron pulpit, from which a sermon was preached on Sundays, between one and three to a congregation of women, as they were not permitted to pass the "row" with a cross of blue marble, which traversed the west end of the nave. This chapel derived its name of Galilee from being the last station of the procession (Martene, de Ant. Mon. Rit., iv. 155, 204), which took its origin in our Lord's command, given to His disciples after His resurrection to meet Him in Galilee (Rupert. Tuiten., l. vii. c. xxi.; v. c. viii.), and a Durham MS., quoted by Hutchinson, and Macro in his Lexicon, both mention that the Sunday procession was held in memory of the apostles' journey. But the Durham Rites say that it was called Galilee owing to the transposition of the eastern chapel to this site. Martene (u. s., p. 363), defines it to be "the lower end of the church," and in this aspect it may refer to the Galilee of the Gentiles as being the most remote part from the altar. It served as the place of penitents, and also for the burial of the worthy dead, says Ducange; but I may be permitted to suggest that the true allusion, after all, was to the original Hebrew word applied to the outer folding gates of the temple (1 Kings vi. 34; Ezek. xli. 24. Comp. Gesenius on the word "Galilee").

In the nave, the sanctuary chamber occupied the basement of the south-west tower: in the next bay was a chapel of the Bound Rood. Towards the east, in the south aisle also, was the Neville chantry, separated by low walls, on the east and west, and from the nave by a screen of ironwork: it contained the prior's pew when he attended the Jesus Mass. Under the north-west tower was the Saviour's altar, and in the next bay the chapel of Our Lady of Pity, enclosed with wooden screens. In the eastern bay was an organ-loft, used by the choir on Fridays for the Jesus Mass, and beyond it were the large

a

* By the Rev. Mackenzie E. C. Walcott, M.A., F.S.A., Precentor and Prebendary of Chichester, read at the Architectural Museum.

folding doors opening into the transept, which were only unlocked at times of procession.

In the nave the great processions were arranged; and at Fountains, at Chichester, and York were two rows of circular *processional stones*, arranged at proper intervals, and allotted as the positions of the superiors and inferiors and singers. At Canterbury two parallel lines were cut in the pavement for a similar purpose. The new pavements were the cause of their disappearance; but at Norwich, on the north side of the nave, is a series of rings, through which, on such occasions, ropes were passed, in order to keep off the pressure of the crowd. Another adjunct which was used at these times was the *tribune* of Winchester, then occupied by musicians; like the *minstrel galleries* of Exeter and Wells. From the former, on Christmas morning, still, at seven o'clock, the choir sings the Old Hundredth Psalm.

The superb series of stained-glass windows of the early part of the fourteenth century at York will give some idea of the enrichment of a Mediæval nave. It also contains a unique feature,—the great beam carved like a dragon's head which supported the font cover, with the effigy of the Christian warrior appropriately facing it. The Norman fonts of Winchester, Hereford, Lincoln, Rochester, Wells, Dorchester, Christchurch, Brecon, and Crowland, and the Perpendicular examples of Norwich, Ripon, and Binham, are well known: it is only remarkable that there are no more, as the right of baptism specially pertained to the cathedral, and in consequence the Pentecostals, St. Chad's pennies and St. Richard's pence, were paid at Whitsuntide, because the cathedral formerly was the only baptistery, and at Easter and Pentecost it was administered (Mayer, i. 49). At Rochester the country clergy paid their cathedraticum yearly on Whitsun-Tuesday, in the cathedral.

At Canterbury, Erasmus mentions the books chained to the pillars for the use of the laity; but there are still earlier instances at St. Alban's, in the twelfth century, of a Bible placed in a painted aumbry, and the best commentators, for the "use of all lovers of Scripture;" and at Hereford in 1369, when Bishop Charlton bequeathed a copy, with other devotional books, for public use in the church. At Lincoln also, in the sixteenth century, a similar practice was observed. At St. Paul's, the standard measured foot was cut upon one of the pillars.

It appears, from several old statutes, that the pillars of the nave formed convenient places for gossipping to the canons out of their choral habit during the time of divine service.

At Durham and Worcester the lower portion of the nave was used as a thoroughfare between the north and south doors in the sixteenth and seventeenth centuries; but at an earlier period statutes in other cathedrals forbid the sale of candles in the cemetery. At St. Paul's the nave seems always to have been from a still earlier period desecrated; whilst at York the gossiping of the vergers in the vestibule outside the rood-screen was frequently prohibited.

The dinnerless lounger was said to be Duke Humphry's guest in the former church, as early as 1400. Bishop Baldock excommunicated persons making the nave a thoroughfare; and in 1385, Bishop Robert forbade buying, selling, and playing at ball; but at the close of the sixteenth century the desecration was something horrible, and only worse than the filth of the floors and the decay of the fabric. Drunkards and vagabonds slept off their drunken orgies on the bench at the choir door; butchers and water-carriers conveyed their wares, and men wore their hats through the aisles; mules and horses were driven across them; tobacconists sold in the nave; seamsters and booksellers plied their trades; a carpenter worked in the crypt; trunk-makers in the crypt disturbed the services; chantries had become cellars, lumber-rooms, and glaziers' shops; choristers, as at Lichfield and Westminster (but less courteous than those of Ripon, who distributed apples to the congregation on Christmas morning), hunted booted gentlemen for spur-money, only less vociferously than beggars pursued the other company; the usurer touted in the south aisle; simony presided on the north; the horse-fair in the central alley; and money was paid on the font. Masked women, ruffiers, ballad-mongers, stall-knights, captains out of service, and quacks, haunted the place; the servant waited to be hired at the serving-man's log; the serjeant-at-law received his client at his special pillar; whilst around were seen the merchants' change and the fashionable lounge.

In the ordinal of Lichfield, 1197, this entry occurs:—"On Pentecost and the three days ensuing, whilst the Sequence is being sung, clouds are customarily scattered." Architecture and tradition come in to enable us to explain this obscure intimation of an old ceremonial. A circular opening still exists in the centre of the vault of Norwich, as formerly in St. Paul's; and there are similar apertures at Exeter. At St. Paul's, Lambarde, when a child, saw at Pentecost a white dove let to fly out of it, and a long censer reaching almost to the floor, and swung from the west door to the choir steps, "breathing out over the whole church and company a most pleasant perfume." Bishop Pilkington, the Sacrist Rolls of Norwich, and the custom at Dunkirk narrated in Ellis's Letters, in 1662, allude to the ceremonial.

The Crossing.—In passing out of the nave into the choir, we must recal to mind the wonderful buttressing arches of Wells, and the less obtrusive examples of Salisbury, 1395—1415, and Canterbury, 1490-1517, which present remarkable evidences of the skill with which the Mediæval architect could convert times of difficulty into opportunities of adding at once beauty and support to a previous faulty construction, in marked contrast to the hideous contrivances devised at Hereford, Worcester, and Salisbury at a later period.

Rood-loft.—When the choirs were extended into the naves, the rood-screen was placed westward of the crossing, in the second bay of the nave, at Norwich, Peterborough, and Worcester; in the third bay at Melrose, Winchester, Binham, and Westminster; in the first bay at Ely, Gloucester, Tintern, Fountains, Chichester, Christchurch, and Chester. At Fountains, a curious range of pottery was found in connexion with it; but it is very doubtful whether it was designed on acoustic principles, or was part of a system of warming, as charcoal was found in the urns. At Exeter, Lincoln, York, Carlisle, Canterbury, Rochester, Lichfield, and Oxford (and Christchurch, Hants, in late Decorated times), the screen appeared under the eastern, and at Hereford below the western arch of the lantern; but the central tower was at length almost universally regarded as the natural division between the nave and choir, and the screen placed in consequence between its eastern pillars: hence its name of rood-tower at Lincoln and Hereford.

In the early part of the twelfth century, a stone screen, with a central altar of St. Cuthbert, was erected at St. Alban's, stretching between the two second bays westward from the lantern. In the thirteenth century a more magnificent screen was erected, formed so as to enclose this altar, in the next bay westward: it had side processional-doors, and windows pierced in its partition walls. In order to compensate for the limited accommodation afforded by the dormitory, the chapel was furnished above the vaulting with an upper chamber, containing about twelve beds, lighted by windows, and covered by a leaded ceiling. At Wymondham there was a dormitory over the south nave-aisle. In the reign of Edward I. the present screen was erected, the altar of St. Cuthbert standing unenclosed between the two doorways. The second screen at St. Alban's must have resembled the arrangement of the screens of Gloucester, St. David's, and Norwich, consisting of a front and inner wall, separated by a considerable interval; possibly one carried a rood and the other supported an ambon. The screen not only served to exclude draughts of cold air and seclude the choir, but also took the place of the double ambones of the basilica, and from its summit the Gospel and Epistle were read (Martene, de Ant. Mon. Rit., iv. 143, 96). Ciampini dates the desuetude of the ambones from the time of the removal of the popes to Avignon, in 1309. It was called *ambo* (Socrates, lib. iv., c. 5), from its stairs, *ἐκ τοῦ ἀναβαίνειν* (ab ambiendo quia intrantem ambit!—W. Strabo, c. 5), or *pulpitum* (S. Cypr., ep. xxxiii., xxxiv.) (Quod sit in publica statuendum, ut qui ibi stant ab omnibus videantur. W. Strabo, *u. s.*). The bishops used it for preaching, and the lectors for reading the Epistle and Gospel: in Cranmer's time the latter were read from the pulpit (Works, ii. 156, 501; Grindal, i. 132). The rood-stairs corresponded to those of the ambo. At Peterborough, Adam de Boothby, on his election to be abbot, was carried on the monks' shoulders to the high altar, and thence to the loft, where he was proclaimed (Comp. Martene, de Ant. Mon. Rit., iv. 232; ii. 154, 159).

The Altar of Jesus or Holy Cross (Willis, Mitred Abbeys, i. 320) usually stood below the great rood or cross. At Exeter the Lady Mass at break of day, and at Salisbury the Matin Mass was sung at the rood altar for the convenience of the working people. A lamp burned perpetually before the rood. A common arrangement of the screen was that of a *central doorway between two altar-recesses*, as at Exeter, 1370-95; Chichester, 1447; Lincoln, 1310; Winchester; Chester fourteenth century; Brecon; St. David's, fourteenth century; Norwich, fifteenth century, and Hereford. At Winchester, the choir platform erected over the crypt extends into the nave, and is ascended by superb flights of stairs: it has been suggested that this space was canopied above the lateral altars. At Hereford the vicars received their dole here, and at Exeter offending vicars were compelled to stand during all the canonical hours of a single day and night. At Durham, athwart the east end of the nave, between the western pillars of the lantern, stood the Jesus altar wholly enclosed like a porch, with wainscot-work, at which the Jesus Mass was sung on Fridays, and the Jesus Anthem, led by the master of the choristers and deacons, on Friday nights during the tolling of the Galilee bells after evensong. It faced westward, with a small doorway at each side of the screen which formed its reredos leading into the transept. On the north side were an organ and loft for the singers. Above the screen was the great rood; with St. Mary and John and adoring angels rising over sculptures of the Passion and apostles, and a broad band of foliage. Behind the screen and under the lantern was the clock. The north rood door was only opened for processions. The screen, like that of Chester, was painted with portraits of English kings and worthies. The choir-door was in the screen between the eastern tower pillars, over which were the great organs, used only on chief days, and the pulpit for singing the Nine Sections in the nocturns of principal feasts. Below the left was a form on which men might rest themselves. A tall square stone pedestal stood adjoining the south-east pillar, for the support of twelve cressets, one of which was lighted at midnight during Lauds. At Norwich, St. William's altar was on the north, and St. Mary's, or the Præcentor's, on the south side, enclosed with wooden screens. In the interval between the outer walls stood the altar of our Lady of Pity.

The other arrangement of the roodscreen was that of a *central door set in a wall*, which existed at Gloucester (of the fourteenth century, and destroyed with its pulpit in 1718); Canterbury, 1304; Wells, Decorated; Salisbury; Chester, fourteenth century; Ripon, after 1489; Worcester, fifteenth century; Carlisle and Lincoln, fifteenth century; Christchurch, temp. Edward III.; and York, temp. Henry VI. At Worcester, on the western piers of the lantern, are stone brackets of the *roodbeam*, at a height of 28 feet from the floor. At Canterbury, pilgrims passed up the south aisle of the nave, and through the passage under the platform of the crossing when about to visit the shrine of à Becket or the Martyrdom; so that the choir was positively secluded from the laity, and the door of the screen used only on occasions of high solemnity and processions. At York, the screen is covered with statues of kings: at Hexham, in the fifteenth century, the oaken panels were painted with figures out of the "Dance of Death." At Exeter, the antiphon was sung daily at the screen, and the procession, symbolical of man's journey through this life heavenward, passed through the north gate of the choir to the vestibule of the Lady Chapel, and then by the south gate of the choir near the throne to the high altar: it afterwards traversed the nave and cloisters, concluding before the rood-loft; and if there was no sermon, the procession returned to the altar. Carpets were strewed along the way on great festivals. The altar of the Holy Cross, in this instance, stood in the north wing of the transept. At Chichester, at Epiphany, an image "of the Spirit" was carried round the church by the dean or senior canon, and two vicars. On Whitsun-Monday, the parishioners in the diocese often came to blows about right of precedence, so that Bishop Storey made injunctions, 1478, for order on this occasion, when the Shrine of St. Richard was visited annually. The place of meeting was the choir and the time 10 a.m. by the cathedral clock. Crosses and banners were permitted, but the long painted rods with which the contending parties had hitherto belaboured each other were proscribed, as well as laughing, crowding, and noise. The pilgrims entered by the great south porch and assembled in the choir, and left the building by it, having duly visited "the chancel and

church." The pilgrims came by way of St. Richard's Wyne and the cloisters.

Organs.—This noble instrument was used at Winchester in the tenth century, and at Bury St. Edmund's in the thirteenth century. At a later period, as at St. Alban's and Crowland (Mon. Anglic., ii. 103) there were large organs at the west end of the nave. At Durham there was a pair over the choir door, on the south of the choir, for daily services; and another, "the orryers," on the north side. At Canterbury, in the twelfth century, and later at Winchester, the organ stood in the north wing of the transept in the ritual choir; but at York, St. Paul's, Westminster, Lincoln, Chester, Worcester, on the north side; and at Gloucester on the south side of the choir. After the Restoration, they were removed to the choir screen to destroy wholly the view of the interior. The vicars and clerks in most cathedrals were required to be able to play upon some instrument; and even in 1635, musical instruments were employed at Lincoln, at Westminster, and Exeter after the Restoration, and at Durham in the episcopate of Cosin and Lord Crewe.

We have now to choose for the position of the organ, usually set on the north side of the choir, not the top of the screen, but between a side chapel, an aisle, or the triforium. I only trust we shall have no more wholesale destruction of a beautiful vault, as at Winchester, for mechanical apparatus. Although the lateral position does necessitate a certain amount of loss to the effect of the music, I cannot but consider this unimportant when weighed against the more than compensating advantage of converting a cathedral into a great congregational church. May we see before long the removal of the modern screens of Westminster, Gloucester, Peterborough, Rochester, and Salisbury, although in the later case the ancient screen yet remains to be set once more in position, or used as a reredos. At Bristol, the screen was dated 1541, and that of Durham was later than the restoration.

*The Transept,** usually ill-defined in France and Scotland, is in England a feature of great importance in the ground plan. The early type was that of an aisleless oblong, with a single or double apsidal chapel to the east. We find this chapel existed in each wing at Tewkesbury, Worcester, Gloucester, Pershore, Christchurch, Hants, Bury St. Edmund's, and Norwich. There were two in each wing at St. Alban's. It is not uncommon to find the wings or arms of the transept called aisles, as at Rochester, Gloucester, and Hereford; as in Latin *ala* or *brachium* were used, the former in a constructional, the latter in a symbolic acceptation. This eastern chapel was double-storied at Canterbury, Worcester, Chichester, and Christchurch, Hants, the upper room being apparently connected with the sacristan's department at Worcester and Christchurch, and with the muniments at Chichester. These chapels were often removed and elongated at a later period, or received a complete re-arrangement and new forms.

At Canterbury, Chichester, and Ely, there was a transverse aisle, as at Winchester, and St. Etienne, at Caen, built possibly for the accommodation of chapels of peculiar sanctity and privacy, as well as to afford additional room for altars and shrines. At Chichester, Chester, and Hereford, a wing of the transept was used as a parish church.

In some instances, as at Carlisle, Chester, Rochester, and Bath, the transept is without aisles; but eastern and western aisles were provided at Ely, Winchester, Westminster, Wells, and St. Paul's; and an east aisle was divided into chantries at Durham, Peterborough, Lincoln, Lichfield, Hereford, and Ripon. At Exeter, two large towers were ingeniously converted into a transept. At Sallay, the transept exceeds nave and choir. The beautiful door of Gloucester, with its stooping angels, it is presumed was the ordinary entrance of the pilgrims and of penitents.

The sacristy adjoins either the transept or choir aisle: *the lavatory* used by the celebrant and assistants (Frances, c. xx. 98), remains at Salisbury, Lincoln, Selby, and Ripon. The *furnace* for baking the altar breads may be seen at Canterbury, Bristol, Lincoln, and Chester: at Lichfield the *hooks* for hanging the lamps used in service remain on the vault. The *calefactory* for lighting the censers is still pointed out at Winchester; the *watching-loft* at Lichfield, and the oriel at Worcester, from which the sacristan commanded a view of all the lights; *St. Peter's Well* at York; the *altar of St. Blaise*, at Westminster; and the *beautiful screen* of Gloucester, pierced (like one formerly existing at St. David's) for the exhibition of relics, are interesting features connected with the old arrangements of the revestry, which at Durham was used at ordinations by the suffragan.

A beautiful flight of steps, at Hexham, led to the dormitory, which communicated with the transept at Bristol, Carlisle, Westminster, Tintern, and Beaulieu. A small watching chamber remains at St. Alban's, and the watcher's door opened into the transept at Rochester. At Durham the bell-ringers slept over the revestry; and at Lincoln the searchers of the church, who walked round the Minster at night, after the doors were closed, and the lady bells had tolled forty times, occupied the old watching-loft of St. Hugh's shrine, in the choir transept. Had this admirable precaution existed, York and Westminster would not have been jeopardied in the present century. At Salisbury the vergers slept near the choir (Leland, Itin., iii. 95). In the north wing was a still more interesting sight, the altar of St. Sebastian and Radegunda, to which belonged the fraternity, consisting of 200 poor folk, men and women, who were furnished with books, shoes, garments, and all necessaries, purchased with the money there given, and distributed by a priest and boy attending at it; but, adds the old chronicler sorrowfully, these brotherhoods, by reason of the frequent frauds committed by some, and the ingratitude of others, and their universal variance, were dissolved and broken up. At St. David's, adjoining the north arm, is the chapter-house, on the first-floor of a three-storied building, with the treasury over it. Two centuries ago old people could remember having seen in the former alms apportioned by basinfuls, there not being leisure to tell them: these oblations were made by seamen, passengers, and pilgrims, at the little dependent seaside chapels, and distributed on Saturdays among the clergy then officiating.

In the great transept occasionally we find two large rose-windows, one in each arm, as at Westminster and Lincoln: in the latter instance that on the north was called the bishop's, and the southern one the dean's eye, as representing their several jurisdictions. At St. Paul's, the Lady Chapel had a superb rose-window in the east wall, and one still adorns the Nine Chapels of Durham. At Chichester, at York, and at Winchester, the rose-window occurs in the transept gable.

The choir transept is the Ala Superior of Gervase. It usually marks the termination of the sanctuary, as the main transept marks the entrance of the choir. As Leland calls "the second transept of Salisbury, a light and division between the choir and presbytery" (Itin., iii. 96). This additional structure would not only accommodate altars, but also sick and infirm monks and canons who were permitted to attend in the retrochoir. M. Vitet gives twenty-four examples of this transept on the Continent, and attributes its origin to an Oriental source (Cathed. de Noyon, Monum. Ined. pp. 204, 225). M. Didron likewise refers it to the influence of Byzantium. M. Martin found it ordinarily in churches built before the Ogival period. It came, probably, from Clugny into England. Chapels at Wells, Hereford, and York, form a *quasi* transept. It marks the limits of the choir at Canterbury, Southwell, Lincoln, York, Salisbury, Rochester, Worcester, Beverley. At Canterbury a pair of towers flanked this transept. At Rochester, in the north wing, the doorway of the Sacristan's chamber remains; and in the south wing the well-known archway of the sacristy, with its remarkable series of carvings, a similar design to which was painted at York.

The Choir (*Chorus cantorum*, Gervase, Scarf. ii. 255),—so called because formerly the choir sang arranged in a circle like a crown around the altar (Frances, p. 87),—in the Norman churches extended under the lantern, and sometimes into the nave, which a screen parted off, as at Winchester, Peterborough, Westminster, Norwich, Gloucester, Chichester, Ely. Sometimes it merely occupied the crossing, as at Chester, Hereford, St. David's, St. Asaph, Bangor. But at length the crossing was constituted a separate division, when the choirs were reconstructed and prolonged eastward during the thirteenth century; a solid rood-screen being constructed under the eastern tower-arch to ward off cold draughts of air, and a reredos added behind the altar. This was the case at Canterbury, York, Lichfield, Carlisle, Exeter, and Bristol.

At Canterbury, York, Salisbury, Lincoln, Rochester, Worcester, the choir occupies the space between the main and choir transepts. At Worcester and York, the western and eastern limbs of the church are of equal length. In many churches a deflection on symbolical reasons was given to the ground plan of the eastern arm, which was regarded as the caput or drooping head of the crucified, reproduced in the ground plan. The inclination is ordinarily to the north, and is first observable in churches of the thirteenth and fourteenth centuries: at Christchurch, Dublin, Bridlington, and St. Mary's, York, it was in this direction; but southward at York, Lichfield, Ely, Tynemouth, Canterbury. At Canterbury we may also observe the remarkable contraction of the central alley towards the east, contributing to improve the perspective and give the appearance of greater length, although designed to avoid the older side towers of the choir, and adapt the new structure to the width of the more ancient chapel beyond.

The Anchorage.—A recluse lived in the aisle of Westminster, at Leicester (Leland's Collect., iii. 337), and another near the Lady Chapel of Peterborough. At Durham, the cell was approached by a staircase from the north choir aisle. At Norwich, a gallery, still existing in the north choir aisle, communicated with the sanctuary men's chamber, which, before the fifteenth century, was the relic chapel of St. Osyth, and occupied by a recluse.*

* To be continued.

THE STRUCTURAL VALUE OF WROUGHT IRON.

IT is now nearly sixty years ago that the scientific acumen of Dr. Thomas Young pointed to the value of, and the part played by, resilience in construction. The teachings of this *savant universel*, as he is termed by Arago, were neglected for many years; and it is only in latter times that we are beginning to perceive that a knowledge of the mere breaking-weight of our materials is a rather delusive sort of knowledge. Hundreds of pounds have been spent on thousands of experiments, and in but a comparative minority of these experiments has the extension been taken into consideration in conjunction with the breaking-weight. Even now there are hundreds of people who estimate the value of a bar of iron merely by the amount of gradually applied weight that it will bear. But the ultimate strength of a balk of timber, or of a bar of iron, is only one of the qualities required by the exigencies of construction. It is not merely the magnitude, but also the nature of the forces to be undergone by any given arrangement that are to be considered. It is not merely the ultimate strength, therefore, of the material used, but its stiffness, or its resilience, or its ductility, that has to be adapted to a special case. As Young says, using literally household instances:—"For a ceiling, stiffness would be principally desirable, for a door, strength; for the floor of a ball-room, resilience; for a coach-spring, resilience and flexibility, that is, resilience without stiffness. An observatory should be as stiff as possible; a ship, as strong as possible; a cable, as resilient as possible. . . . . It is a common remark, that a floor which shakes is the strongest; and, improbable as it appears at first sight, it may perhaps be founded on truth; for if the absolute strength of a stiff and a shaking floor were equal, the shaking floor would bear the effects of motion with the least injury. It is possible that a stiff floor, which would support a numerous assembly, might give way at a ball, while a more resilient one, which would be suited for dancing, might be destroyed by a crowded concert."

At the time Dr. Young wrote, the modern engineer may scarcely be said to have had an existence. Unprovided with the present immense stores of iron, and more especially of wrought iron, there was no other material of a sufficiently tough character, with sufficient latent molecular power for diverting the energy or impetus of a body in motion, that would render possible structures such as our railway bridges—structures that have to absorb the otherwise destructive effects of a moving load. But these results cannot be attained by the use of a material which merely has a high ultimate cohesive power. An eminent French engineer has pointed to a useful measure of the working properties of iron, and we will now hear him in his own words. The power of clear, and of simple, yet *gründliche*, scientific description, indeed appears

at present almost like a lost art in England. We have, on the one hand, a set of manuals bristling with integrals, which have about the same effect on the majority of readers as the signs of the Cabala; or, on the other, the most flimsy and superficial accounts of matters that can never be really acquired by any amount of flimsy and superficial reading. The French appear to excel both ourselves and the Germans in the exquisite clearness and elegant precision of their scientific works. One of their most distinguished writers on engineering questions is the well-known General Morin, who is probably the ablest experimenter of the day, and whose results form the stock-in-trade of the innumerable ill-considered "engineers' pocket-books" that are perennially launched forth on the public of this country. Perhaps the most useful and complete work on the subject are his two volumes *sur la résistance des matériaux*.*

Much of the course of reading required by any engineer or builder who wishes to know what he is doing is laid down in the simplest and clearest manner by the aid of easy formulæ known to every tyro in algebra, and sometimes by simple, and yet remarkably ingenious geometrical expositions. Every one knows, or ought to know, French now-a-days; and the slight impediment, at first sight, to some, in the metrical weights and measures, ought to be rather considered as an advantage at this time,—at any rate, if it be not expected that Mr. Ewart's Measures and Weights Bill will remain a dead letter. To a reader who does not know thoroughly French, we cannot imagine a better way of acquiring the language than by means of such works, as the figures and formulæ form a universal language, and one that gives a running translation of the text. It is in this way that General Morin develops Poncelet's co-efficients, to the use of which so much attention has been lately given by engineers; but we need not say that his sentences are not improved in their English dress.

"As bodies elongate under the action of forces exerted in the direction of their length, their resistance develops, for each increment of the total extension, an amount of work measured by the product of the effort exerted into the elongation.

If a curve be now constructed, the ordinates of which represent the successive efforts exerted, and the abscissæ of which represent the elongations, or the distances passed in the direction of these efforts, then the quadrature of a curve of this kind will give the value of the work done in producing any given elongation.

This quadrature, carried out from the commencement of the elongations up to the extension corresponding to the limit of elasticity, gives the work done by the resistance of the given body during this given interval. M. Poncelet has termed this work done, *the living resistance of elasticity*, and he designates it by the sign T_e. If the quadrature be carried as far as the effort which takes place at the time of rupture, the total work necessary to rupture the body will then be obtained. This work done is termed by the same author *the living resistance of rupture*, and he represents it by the letters T_r, for each metre of length, and for a given unity of cross sectional area.

It will be at once seen that the work T_e, or the living resistance of elasticity, is given by the area of a triangle, the base of which is the elongation per metre corresponding to the elastic limit, multiplied by the length L of the body, and the height of which triangle is the effort corresponding to this limit." It may perhaps be as well to here remind ourselves of the sufficiently obvious fact that the amount of elongation, or the amount of the compression, of a body under a given stress, is proportionate to its length—that, for instance, a bar (say) 10 feet long will elongate under a given stress ten times more than a bar 1 foot long. This relation of the extension of a bar to its length is therefore evidently a constant quantity, which we may term i, and which in our case represents the elongation per current metre. Within certain limits, varying for different materials, the amount of elongation increases in the relation of the force exerted to the cross sectional area of the bar. That is to say, the bar does not take a permanent set by a strain the amount of which does not exceed the elastic limit. The experiments of Mr. Hodgkinson would appear to show that, for instance, a wrought-iron bar takes a permanent set with a very slight load, with a load much within the amount generally assumed as the elastic limit by engineers,—a limit upon which all the most successful constructions and adaptations of iron have been based. But, in the first place, the amounts noticed were microscopically small; and, in the second, the extensions only began to rapidly and irregularly increase *beyond* the limit generally received as true by engineers and builders. This co-efficient of elasticity may be called E; and supposing, therefore, that the load P is per square millimetre of cross section A, and that i is the elongation per metre corresponding to the limit of elasticity, the general relation $P = A\,E\,i$ becomes $P = E\,i$.

The area, therefore, of M. Poncelet's triangle representing the work done per each square millimetre in stretching the body, is $\frac{1}{2}\,P\,i\,L$; and, as we have seen that $P = E\,i$, then, substituting $E\,i$ for P, $\frac{1}{2}\,P\,i\,L = \frac{1}{2}\,E\,L\,i^2$. If the cross section A be expressed in square metres, then $T_e = \frac{1}{2}\,E\,A\,L\,i^2$. It will be seen that this product will increase the more the body has the power of keeping its elasticity under the action of forces tending to lengthen it. A glance at two or three curves constructed in this way will show that hard kinds of iron give a considerably higher living resistance of elasticity than the soft or ductile qualities.

If the quadrature be extended to the total surface of the curves, which surface is of course cut short at the ordinate corresponding to rupture, it will be seen that the area,—which represents the total work developed in producing this rupture,—is much greater for soft iron than for hard iron. This shows the advantage of, and the security given by, soft kinds of iron in all cases where the parts are subjected to shocks or to accidental efforts." General Morin gives the following practical examples:—"A bar is found to gradually lengthen up to a load of 16 kilogrammes per millimetre cross section; its elongation per current metre being $i = 0{\cdot}00086$m.; the work done, or the living resistance of elasticity, or T_e, is per square millimetre of section:—$T_e = \frac{1}{2}\,P\,i = \frac{1}{2} \times 16$ kil. $\times\ 0{\cdot}0086$ m. $= 0{\cdot}00688$ kilogrammetres.

Another bar of round iron, 6 metres long and 0·030 in diameter, or with 707 square millimetres cross section, will give a living resistance of elasticity of $T_e\,A\,L = 0{\cdot}00688$ km. $\times\ 6 \times 707 = 29{\cdot}18496$ km. If, for instance, a body of the weight Q, falling from a height H, had to be arrested in its fall by this bar, then the work developed in this body by gravity, or the half of its *vis viva*, $\frac{1}{2}\,\frac{Q}{g}\,V^2 = Q\,H$, would have to be absorbed by this bar. In order that the elasticity of the bar should not be destroyed, the product $Q\,H$ must not exceed 29·18 kilogrammetres. Thus, a weight of 1,000 kilogr. falling from a height of 0·02918 m. would develop a certain amount of work, which, if exceeded, would affect the elasticity of the bar.

The quadrature of the total surface of the curve, or the living resistance of rupture, would give $T_r = 4{\cdot}467$ km. per metre of length and per square millimetre of section. . . . . The application to the bar 6 metres long by 0·030 m. in diameter, would give, for the living resistance of rupture, the value $T_r\,A\,L = 4{\cdot}797$ km. $\times\ 707 \times 6$ mil. $= 19076{\cdot}27$ km., from which it results that a weight of 1,000 kilog. ought to fall from a height of 19·076 m. in order to break the bar. It will be seen by this example that soft iron is only broken when it has absorbed a *vis viva*, or after having developed a living resistance, very much superior to that sufficient to alter its elasticity."

The first man of science in England who appreciated the great practical value of Poncelet's co-efficients was Mr. R. Mallet. In a work of the highest importance on the "Physical Conditions involved in the Construction of Artillery," published in 1856, these co-efficients of elasticity and rupture were applied to an investigation as to the best material and structure for artillery; and, in 1859, to an important paper read on the 1st of March, before the Institution of Civil Engineers, on "The Co-Efficients T_e and T_r of Elasticity, and Rupture, in Wrought Iron, in relation to the Volume of the Metallic Mass, its Metallurgic Treatment, and the Axial Direction of its Constituent Crystals." Mr. Mallet has adapted M. Poncelet's co-efficients to the English mechanical standard of work,—foot-pounds; and the units of force and range thus adopted at once show the work done in producing the change of form. The co-efficients T_e and T_r thus translated into English, mean the work done by tension in elongating a bar of iron of the English unit of length 1 foot, and the unit of section 1 square inch, at the point of elastic limit T_e, and at that of rupture or of cohesive limit, T_r. In the same way the co-efficients T_e' and T_r' show the work done in compressing a bar of 1 foot in length and 1 inch cross section at the points of elastic limit or of permanent distortion T_e' and of cohesive limit by crushing T_r'. The force being variable between zero and i, as was graphically expressed in the triangle used by Morin, they are similarly obtained by multiplying the actual force applied, at the point either of the elastic limit or of rupture, into one-half the range of extension or of compression. Thus, the original faggot-bars for the Mersey Company's gun were found to take a permanent set with a load of 12·031 tons per square inch. The total extension of a bar 1 foot long, under this load, was 0·0292 of an inch. The tons being expressed in pounds, and the decimals of the inch in terms of a foot, one-half the product of the two amounts is $T_e = 32{\cdot}789$ foot-pounds. The tension at rupture of this bar was 21·875 tons; the total extension was 0·6600 of an inch; and expressing as before the weight in pounds and the decimals of the inch in terms of the foot by dividing them by 12, the product of the two numbers, divided by 2 is $T_r = 1347$ foot-pounds. The total compression per unit of length at the elastic limit was 0·36 of an inch; this was effected by the pressure of 21·42 tons; the final value of T_e' was therefore 360·0 foot-pounds. The pressure at complete distortion was 27·68 tons; the total compression was 0·64 inches; the value of T_r' due to complete distortion was therefore 821·0 foot-pounds.

The only objection we have seen made against the use of these expressions is that of Mr. Bramwell, who said that "if, for example, a cylinder, composed of hardened cast steel, containing an elastic body, as compressed air, which exerted a pressure of 1,000 lb. per square inch, was incapable of extension without fracture, and of fracture without a pressure of 1,001 lb. to the inch; then it would never give way under a steady strain of 1,000 lb. to the inch, and therefore would be fit to sustain that pressure. If, on the other hand, the material was only capable of supporting a strain of 999 lb. to the inch, but had a power of stretching an inch before fracture, then it was equally certain that with 1,000 lb. to the inch the cylinder would give way, and therefore would be fit to sustain the pressure; although the work done would be represented by 999 lb. moved through the capability of extension, viz., 1 inch; whereas the cast-steel cylinder would break with 1,001 lb., without appreciable extension, and the work done in so breaking it would be 1,001 lb., through an infinitely small space, and would, therefore, practically be nothing. This illustration showed that the value of a metal to withstand a quiescent load, did not depend entirely upon the work to be done in order to break it. If the impact from a non-elastic body had to be resisted, then this theory might be true; but he apprehended it would not be found to be so, when materials had to withstand pressure from elastic fluids. For hydraulic presses, boilers, air-vessels, &c., where there was an elastic load within the cylinder, this principle was not capable of application."

Now, without examining the conditions affecting the pressures of elastic fluids, and those of practically non-elastic liquids, it would appear that the condition supposed could not very easily exist, as the hardest steel must have some extension, and is never without some elasticity. But Mr. Mallet carefully guards these co-efficients from the assumption that structural value depends upon them alone. "It is upon the just balance of rigidity and extensibility, or ductility with cohesive power, that the true value of iron, in whatever state, depends as a material for construction."

Of course it is clear enough that T_r may be the same for a bar which has a high ultimate breaking strength, and a very slight extension, and another bar which has a low breaking strength, but a high amount of elongation. In choosing a certain material for a given purpose, both the factors should be taken into consideration. And, as was pointed out by Mr. Mallet, these expressions have another manifest advantage over others of the kind, that they admit of direct comparison with other correlated physical forces; for example, with the heat evolved by compression or extension, as measured into mechanical effort.

* Résistance des Matériaux. Par Arthur Morin, Général de Division d'Artillerie, Membre de l'Institut, etc. etc. etc. Troisième édition. Hachette & Co., Paris and London. 1862.

THE BUILDING AND IRON TRADES.

THE Birmingham architects have been endeavouring to bring the masters and workmen to a good understanding, so as to obviate the threatened strike. They called a meeting of both parties on the eve of the expiry of the time allowed to precede the strike, for the purpose of discussing the questions of difference.

Mr. J. T. Bunce, an honorary member of the architects' society, and a gentleman disinterested as regards both parties, was called upon to take the chair, and he presided over a very large and, on the whole, good-tempered meeting. There were, in all probability, about 800 members of the different trades present. The following architects were also present:—Messrs. Holmes, Chamberlain, T. Plevins, Bateman, Phipson, J. G. Bland, Cranston, W. Harris, Payne, Perry, Empson, Thomason, Chatwin, Jewell, Jenkins, Norton, Mansell, Fiddian, Orford, F. D. Johnson, and Hawkes. Amongst builders were Messrs. Hardwick, Briggs & Son, W. & R. Smith, J. Barnsley & Sons, W. & J. Welch, Wilson, Jeffry & Pritchard, Mathews, Heywood, Cresswell, Pashby, Bennett, Grove, Jones, and Godfrey.

Various delegates from the workmen were also present, and spoke moderately as to their respective grievances. Mr. J. H. Chamberlain moved the following resolution:—

"That, in the opinion of this meeting, it is desirable that the question in dispute between the master builders and the workmen should be settled in a friendly manner, either by arbitration or by a conference." The architects, he said, did not presume to dictate as to which of the two courses should be adopted, for they felt that either in arbitration or in a conference lay the only hope of bringing this dispute to an amicable termination. He believed that the dispute had arisen out of the very nature of things—out of the growing prosperity of the country, and out of that growing prosperity of the working classes which they were all delighted to witness; and when a crisis of this kind came, it was impossible to avoid it. The parties took different views perhaps extreme views—and the plan to remedy it was to call in the aid of some third person, who was not personally interested with the trade, to settle between them. He hoped some means would be taken to prevent the possibility of a strike, which, besides the pecuniary loss which it inflicted upon all persons concerned, laid the foundation of feelings of animosity which years could not wipe out. He asked all present to vote in favour of the resolution before the meeting, and at their own meeting to give the matter such mature deliberation as should secure its speedy and friendly settlement.

Mr. Plevins seconded the resolution; and, in doing so, said that the architects would in a body be glad, after hearing both sides of the case and weighing the evidence, to advise as to the course which should be adopted at this juncture.

Mr. Wilson (master builder), disclaimed on the part of the class to which he belonged any hostile feeling towards the men, whose interests were identical with those of their employers, and thanked the architects for having called the meeting, and thus thrown "oil upon the troubled waters." The reason why the masters did not then say anything, was that they were pre-engaged to meet the delegates from the various branches, with a view, if possible, to an amicable arrangement of the dispute. He thought that discussion on the part of the masters would come much better at that meeting.

The resolution was then put and carried, three only dissenting.

Mr. Bateman moved an adjournment of the meeting until after the discussion between the masters and men. This also was agreed to, as also that a deputation of architects should attend the trades' meeting, Mr. Chamberlain, Mr. Harris, Mr. Plevins, and Mr. Holmes being nominated to form the deputation.

The adjourned meeting was held on Saturday: Mr. Bunce, as before, presided. The delegates stated that they had not yet had time to consult the trade societies, but they promised to do so in the course of Saturday evening, and return a final answer on Monday morning. They were, generally speaking, favourably disposed towards the proposed mode of settlement, but they expressed a determination not to return to work again until the matter is arranged. The masters, on hearing this, decided that they must reconsider their previous decision as to a conference. The strike commenced on Monday. The proposal to refer the matter in dispute to arbitration, as suggested by the architects, was assented to by the masters and by the masons and carpenters, but declined by the bricklayers, plasterers, and labourers. The masters were to hold another meeting, and their *ultimatum* was to be made known probably to-day (Thursday).

At Hull, the whole of the bricklayers connected with the Society have struck for an advance of 6d. per day. Circulars were sent to the various builders demanding an advance, and also threatening that the men would not work unless the demand were acceded to. In one or two instances the advance was paid. Several hundreds of bricklayers are now out. Their wages were 4s. 6d. per day. The bricklayers' labourers, who had 18s. per week, have also struck for 21s.; and they, where work is pressing, have got the advance demanded.

The threatened strike of painters in Carlisle for an advance of two shillings per week has been averted by an arrangement with the masters, favourable to the men, but not to the full extent of their demand. The majority of the masters in the town signed the agreement.

At Malvern, the bricklayers and plasterers in the employment of Messrs. G. M'Cann & Everal, builders, refused to go to work until the masters agreed to let them leave in the evenings at 5·30 instead of 6 o'clock, and to have an hour at meals in winter, instead of half an hour as at present. The workmen in the employment of Mr. Perkins, builder, also refused to work under similar circumstances. An arrangement has since been effected between the masters and the men.

In consequence of strikes at one or two establishments for an advance of wages, the master builders of Plymouth, Devonport, and Stonehouse have decided upon a general lock-out. At a numerous meeting of carpenters and masons since held, a resolution was passed to the effect that the course adopted by the masters was unjustifiable, and merited their censure; but they trusted that the misunderstanding would soon be brought to a satisfactory settlement.

In the Leeds district seven large ironworks have been closed, in consequence of the men (both trade unionists and otherwise) refusing to accept an agreement proposed by the employers which would bind them not to associate or organize for the purpose of resisting any of the employers' arrangements in the labour department. The works so closed are the Monk Bridge, Perseverance, Clarence, Pottery Field (all in Leeds), Bowling and Low Moor (both near Bradford). In consequence of this disagreement five or six thousand puddlers, rollers, ball-furnacemen, &c., are thrown out of employment; though we understand that already strong symptoms appear of an amicable settlement being speedily arrived at. One of the leaders of the workmen, a Mr. Kane, charges another,—Mr. Marshall, the secretary for the Leeds district,—with having brought about the present dispute by peremptorily insisting upon the discharge of a non-union man from Messrs. Witham's, the Perseverance Mills, whereas the executive held it to be impolitic for their members to treat as obnoxious those who did not happen to belong to the same association. This assertion by an individual so high in authority among the men has produced a good deal of sensation, as clearly tending to pacification and conciliation.

At Liverpool a number of puddlers, employed at the Mersey Steel and Iron Works, have struck work, not for any increase of wages, but to compel their employers to ventilate the places where they work. That there was reason in the men's refusal to work appears from the confession of one of the firm, that he had thought of opening additional apertures in the walls, and that now they were in fact being opened; but why should the men have been forced to strike from want of these apertures? It would have been for the interest of the masters in more ways than one; for not only would the men have been better able to do justice to their arduous labours, but the metal, which is puddled for the very purpose of exposing it to the oxygen of the air, would have been better, and more quickly, and hence more cheaply, prepared.

At a meeting of the iron trade of the United Kingdom, held in London on the 28th ultimo, attended by its most influential members, resolutions to the following effect were unanimously adopted:—"That this meeting, without any desire to interfere with the right of the workmen to combine for any fair and legitimate object, is resolved to resist, by every means in its power, all attempts on the part of any combination of workmen to dictate to their employers the mode in which their work shall be conducted, and what workmen they shall employ; and, with a view to maintain this principle, a committee be formed, representing every iron-making district." These resolutions seem to refer to the Leeds lock-out.

PROPOSED GALLERIES AT SOUTH KENSINGTON.

THE Commissioners appointed to award the premiums for the designs submitted in competition for the galleries, met on the 29th ult. for the final decision. There were present:—Lord Elcho, in the chair, and the other commissioners, Mr. Tite, Mr. David Roberts, Mr. Fergusson, and Mr. Pennethorne. After final examination and discussion, they reported, on the 2nd instant, that they unanimously awarded the first premium to the design distinguished by the motto, "Ad ogni uccello," &c.; the second to that marked "Well to build," &c.; and the third to that inscribed "Pro Rege et Lege."

The report having been forwarded to the Chief Commissioner of Works, the Right Hon. W. Cowper, M.P., and the letters opened, it was ascertained that the first premium of 400*l.* had been awarded to Captain Fowke; the second, of 250*l.*, to Professor Kerr; and the third, 100*l.*, to Mr. C. Brodrick.

We understand that Professor Kerr, on behalf of the unsuccessful competitors, has protested against the decision, and appealed to the Institute of British Architects. His grounds are that the instructions had been exceeded by the author of the design "Ad ogni," &c.

We shall conclude review of the designs in our next. A full description of the first and second selected designs will be found in a previous number.

We are asked to mention that the drawings to which the first premium was awarded were coloured by Mr. Burbidge.

COMPETITIONS.

The new Literary Institute Building at Wednesbury-hall.—The designs for this new institute have been sent in, and the one by Mr. Veall, architect, Wolverhampton, has been accepted. The institute is to be erected on a site in Lichfield-street, Mr. R. D. Gough consenting to sell the ground for that purpose at 6d. per yard. The estimated cost of the building is 1,100*l.*, there still remaining 600*l.* to be subscribed to finish the undertaking.

CIVIL ENGINEERS IN INDIA.

APROPOS of this question, we have received a letter by the last Bombay mail, *vid* Marseilles. Our correspondent, to whom we were indebted some time ago for some notes on the Bombay artisans, is engaged in making roads and building bridges (some of these are of enormous dimensions) in the districts of Aurungabad and Berar, and dates at present from the "Goar River Bridge, Seroor." After stating a number of facts respecting the administration of public works in India, and the character of the work turned out by the military engineers, he proceeds to touch on rather a vital part of the question: "Berar is the great cotton district of India; and the Manchester people, or rather the manufacturing interests of England, are deeply concerned in what are now called here "cotton roads" and "railway feeders;" but if you only knew the kind of assistance they get from the Government,—if you could show how the money is misspent and squandered by those who direct,—I am confident, if there were no other remedy, that the Manchester Cotton Association would make a nice "Government grievance" out of it. The Aurungabad roads, he says, are all at a stop, owing to a dispute about the levels and the measurements; and the whole difficulty arises from the want of proper direction.

THE HOTEL MOVEMENT.

THERE seems to be no slackening in this movement, which extends to all parts of the country. What can have caused it, it is hard to say: doubtless some published statements as to the large profits of two or three metropolitan hotels have had something to do with it; but it is very questionable whether large profits are the rule and not the mere ex-

NEW CONGREGATIONAL CHURCH, SCARBOROUGH.

MESSRS. LOCKWOOD & MAWSON, ARCHITECTS.

ception. That the reiterated complaints in the newspapers of the extortionate and preposterous conduct of hotel-keepers in this country have not led to it seems evident, else we should have had plentiful promises of amendment in this respect. As indicating the very questionable sequence of large returns from such charges, however, even these complaints may have helped the movement; in which case the public had better look out, for their pockets are in more peril than ever. The only exception we recollect of is that of the Newmarket Hotels Company, in whose advertisement repeated allusion is made to a reform in the tariffs of extortionate charges. This new scheme is introduced under the auspices of a long list of lords and earls, headed by a duke and a marquis. The Palace and Burlington Hotels, in London, are about to be handed over, like so many others, to a new company, who are to have the benefit of the services of the present proprietor of both. Other schemes are the Bell Hotel Company, of Gloucester; and an Abingdon Hotel Company, with a new hotel on the site of the old Queen's Arms. The foundation-stone of the new Pier Hotel at Southsea has been laid.

THE ROOF OF THE GUILDHALL, LONDON.

At the last meeting of the Common Council, Mr. Kelday, the chairman of the Guildhall Improvement Committee, brought forward a motion for which the court was specially convened—namely, on the reference relative to the roof of the Guildhall, and recommending that the design of the proposed roof should be modified so as to make it in accordance with the intentions of the court and the period of the architecture of the hall, that the roof should be constructed of oak; also that the ancient windows, now blocked up, be opened, and that the four turrets be pulled down to the level of the wall; the whole to be carried out at an additional expense not exceeding 5,900*l*. Having briefly moved the adoption of the report, he said, that after consulting the City architect, Mr. D. Wyatt, and Mr. Roberts, they had come to the unanimous opinion that it was not advisable to carry out the original contract; as, if they did so, the new roof would not only not be erected in accordance with the intention of the court, but would be at variance with the ancient architecture of the building, and would very possibly subject the corporation to a great deal of comment on the part of those versed in such matters. After a few words from Mr. Rowe, to the effect that it would be better, in his opinion, to pull down the present building and erect a new one upon its site, and a suggestion by Mr. R. N. Phillips that the alterations should be made by tenders to be obtained by advertisement, the report of the committee was unanimously agreed to. The total cost will be about 23,000*l*.

BRICK FIRE-PROOF CONSTRUCTION.

In our volume for 1861 we described some brick arches under and over stables, erected for Mr. Smith, of the Strand, under the direction of Mr. F. H. Groves. The same architect, considering that it was practicable to erect a building wholly in brickwork, including the floors and roof, without the use of iron or wood, has since set up a brick model, so to speak, 20 feet long, 11 feet wide, and above 10 feet high, in two compartments, one illustrating a floor and close roof, the other an open-panelled roof for light, and adapted to any extent of embellishment. The floor in the first compartment is represented by an arch, taking on an average little more space than would be required for a wood floor with girders and ceiling joists. Above the floor is the close roof, also taking no more space than would be required for an ordinary roof, from the uppermost ceiling of square rooms to the ridge.

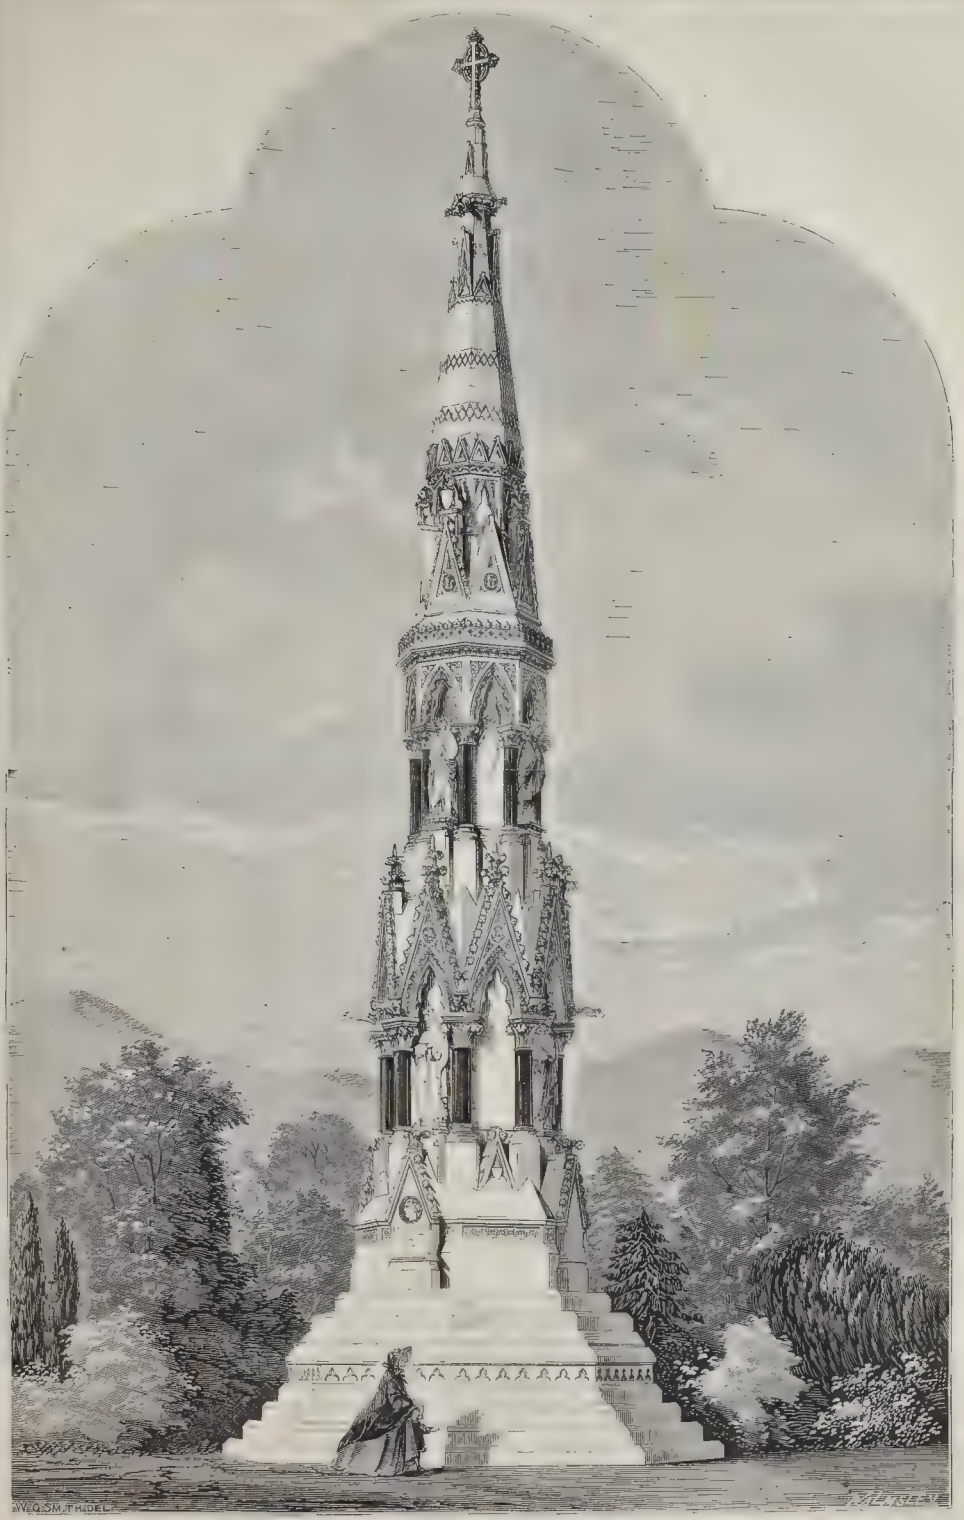
One object sought in the construction was to obviate the risk of thrust upon the outer walls, without any great extra thickness of walls, buttresses, or superincumbent weight beyond the ordinary height of a parapet, excepting at the extreme angles of the building, and something subordinate over the piers between, which would be of a decorative character, such as pavilions, pedestals, terminals, &c.: at the same time provision has been made for fireplaces, flues, and windows, by which, it is urged, it might be made applicable to churches.

In the model, the angle piers are two and a half bricks square, to admit of flues in them. The intermediate piers are two bricks square, for the same reason.

In the compartment where the roof only is shown, the space is covered by an open-panelled revolving arch; the main ribs are 9 inches deep. There is but little parapet; but the angle piers and intervening ones are carried higher, for the twofold purpose of weight and decoration, as before intimated.

In conclusion, it may not be misplaced to venture an opinion as to areas that may be covered by arches on this principle, of different thicknesses: Mr. Groves thinks a half-brick arch will suffice for a square, to a square and a half, or about 150 superficial feet; one brick about four squares; two bricks about sixteen squares, showing its applicability to buildings of various sizes. Touching the cost, he says that, in taking out the quantities in one bay of St. Katherine's Dock warehouses, and a bay of a warehouse constructed on this principle, the result showed the latter to be somewhat the cheaper of the two.

In carrying out construction on the principle here indicated, careful calculations and good workmanship would be necessary.



NEW CONGREGATIONAL CHURCH AT SCARBOROUGH.

THIS building is about to be erected on the South Cliff at Scarborough, at a cost of 8,000*l*., from the designs of Messrs. Lockwood & Mawson, architects, and on a site presented to the Committee by Mr. Titus Salt. Externally, the structure will be faced with Whitby wallstones and ashlar dressings; and internally the nave, transept, and organ chapel, piers, and arches, the door jambs, and the roof corbels, shafts, and capitals, will be of the same stone. The spire rises to a height of 160 feet, and accommodation is provided for 1,000 worshippers. Commodious class-rooms, committee-room, vestries, &c., are planned in the rear; and it is intended that the building is to be completed by July, 1865.

THE MEMORIAL TO THE LATE SIR G. C. LEWIS, BART., FOR NEW RADNOR.

THIS memorial is in due course of erection, and the committee fully anticipate having it completed and inaugurated during the month of October next. The accompanying engraving represents the design, which was selected from fifty-nine other competitive drawings sent in. The cost of the structure is estimated and contracted for at 1,000*l*. The total height will not be less than 77 feet, and the greatest width at the steps 25 feet. The material is Box ground stone, with red Mansfield stone columns. There will be four Caen stone figures in the first stage, and four in the second, all allegorical. A large medallion presenting a profile portrait of the late baronet, in marble, will occupy one of the lower gables of the base: coats of arms will appear in the three other gables. The plan throughout is octagonal.

The site first chosen was the Castle-hill; but after the workmen had tried the ground here and there at various depths, they unexpectedly came upon the foundations of the ancient Castle of Radnor, the character and condition of which are interesting and good. Consequently, the committee very wisely determined upon selecting a new site, which is between Radnor and the residence of the late baronet, and better adapted for the memorial, which is after the Eleanor Cross style, than a mound 100 feet high. Besides the family arms, &c., there will be many coats of arms of an historical character, with much elaborate carving. The architect of the memorial is Mr. John Gibbs, of Oxford; the contractor, Mr. W. Mansfield, of Kington, Herefordshire; and the carver, Mr. W. Stevens, of Barnwell.

THE CORNEWALL LEWIS MEMORIAL, NEW RADNOR.—MR. JOHN GIBBS, ARCHITECT.

ARCHITECTURE AT THE ROYAL ACADEMY DINNER.

ARCHITECTURE was a prevailing topic at the dinner given by the Royal Academy on Saturday last.

The president (Sir C. Eastlake) in proposing the health of the visitors, said,—On a former occasion I ventured to express a hope that the study of the fine arts might, to a certain extent, be introduced in our universities. I am happy to find that steps are being taken with a view to the promotion, at least, of that object; and should those efforts be successful, I trust that architecture will occupy the first place in any scheme that may be proposed. Although now extensively employed,—perhaps more so than at any former period,—architecture has not been so much an object of general interest as have been its more intelligible rivals. More creative than imitative, it does not, like them, admit of a direct reference to nature to test its excellences or shortcomings. Again, the greater part of its examples are only accessible to the student in fragmentary details or in comparatively minute copies. The mountain cannot come to Mahomet: transcripts and models have not the charm of original productions; and, except to professional eyes, convey but imperfect ideas of real structures. If I notice these circumstances, it is only to add that, notwithstanding the difficulties they suppose, the intelligent appreciation of architecture is everywhere increasing, and even its graver study has attractions for non-professional votaries. The prosperity of the country is undoubtedly the chief cause of the impulse which this noble art has received; but we are not the less sensible of the encouragement which is being extended to it by the Government and by public-spirited individuals. Societies have also done their part: I speak not of speculative undertakings, however useful, but of more disinterested efforts. The exertions of the Institute of British Architects, and the establishment a few years since of an Architectural Museum—an object accomplished with the zealous and liberal assistance of some enlightened amateurs now present—have all co-operated in producing the results to which I have the satisfaction to refer. At such a time the introduction of the study of architecture into the University curriculum would probably find public opinion prepared to recognise the advantage of such an addition. Viewed only as an academic study, no pursuit connected with the objects of taste can more fitly recommend itself as an adjunct to a liberal education. An acquaintance with the architecture of antiquity, leading to a corresponding knowledge of Greek sculpture, is closely allied to classical studies. Mediæval architecture, the examples of which abound in our own country, and even in the seats of learning themselves, has a peculiar interest from its frequent past and present application to the service of religion. It is also to be remembered that much of the theory of this art, depending as it does on scientific principles, is communicable by lectures and illustrations. With such aids and the study of existing edifices, the attainment of correct knowledge, the power of appreciating well-selected examples, and the gradual formation of a sound judgment, would be placed within the reach of many. I advert to this subject now, because some of those whom I have the honour to address may possibly have opportunities of assisting the efforts which are at present being made for promoting the study of the fine arts in the Universities. I have the honour to propose "The health of the distinguished guests who this day honour us with their presence."

The Archbishop of Canterbury, who replied, said in the course of his address,—As to the remarks you have made, Sir Charles, on the cultivation of the fine arts, and especially of architecture, in our public schools and Universities, I so far agree with you that I should be glad to see every branch of knowledge, and all the accomplishments which may combine to form the complete English gentleman, pursued therein, so far as is compatible with the maintenance in its real supremacy of the study of classical literature. That has hitherto been the staple of the education of the youth of England in our public schools and Universities, and will, I trust, continue to be so.

Again, in proposing the health of the Lord Mayor, the president got back to our art:—The prosperity of London, still marking its course by noble and patriotic results, begins to manifest itself also in an increased attention to external improvements. We may, consequently, indulge a hope that, before many years are past, the appearance not only of the city properly so called (which has led the way), but of the metropolis generally, will be more worthy of its universal importance. Instead of vieing with other States in the cost of armaments, it will then be satisfactory to contend with them in more peaceful objects; rendering our streets more convenient, our public buildings—whether museums or courts of law—more spacious and better adapted to their purposes, and our noble river more sightly. Such improvements, spread over many years, need not alarm even a Chancellor of the Exchequer. Apart from the question of cost, it is remarkable that our lively neighbours seem to be more patient than ourselves with regard to the necessarily slow progress of great undertakings. The poet Dryden regarded the Louvre as the most magnificent of earthly structures; yet how inferior must have been its effect in his day compared to that which it now presents. Whatever may be said of its architectural details, it is an instance of a comprehensive design, adhered to through ages, and finally completed. Viewed in that light, such works may serve as examples even to English perseverance.

The Lord Mayor, of whom there is a very good portrait in the exhibition, in replying, observed,—I should on this occasion have confined myself to the simple acknowledgment of the toast which has been proposed; but you have indicated a programme for the City of London which requires that I should make one or two observations in regard to it. You have stated what might be done in the shape of improvements in the City of London; but it appears to me that the City is very much in the position of the Israelites in Egypt, who were required to make bricks without straw. We are deprived in a great measure of the power of making improvements by the curtailment of our resources. And our power is interfered with in other respects. You have pointed to France and the magnificent improvements which have been effected in Paris; but it should be known that there they have something like 2,000,000*l.* sterling per annum to carry out these improvements. The city of London, on the other hand, is not permitted to hold the means she has, or use them for the improvements of this great metropolis.

Again it cropped up.

The President observed: Recurring to a subject on which I before ventured to offer some remarks—the introduction of the study of architecture in the universities—I now beg to propose the health of one who, in addition to his many other claims to our respect, is entitled to our thanks as having been himself formerly a successful labourer in the interesting field of architectural investigation; and who, having devoted much attention to the subject, may be disposed to think it not incompatible with university studies. I mean the distinguished master of Trinity College, Cambridge,—Dr. Whewell.

Dr. Whewell said that if he had been called upon as representing his University he could have responded with great pleasure, and could have said with great truth that that body was delighted to be remembered in any assembly of their countrymen in which men's minds were strung to elevated objects and pursuits—to the pleasures of intellect and imagination—to the admiration of art as well as of science. But that having been mentioned by the President with especial reference to his own concern with architecture, he could readily say that he looked upon the study of that subject as well fitted to enter into a course of intellectual training. Architecture had always seemed to him an especially intellectual study. He had first taken interest in it many years ago as a subject for theoretical history, and his views on that subject had been assented to by some of the most acute architectural speculators in Germany and in England. If there were time to dwell longer on the subject, he might remark that the prevalence of the intellectual element in architecture appeared at every period of the history of the subject, in the union and opposition, the contrast and the approximation, of the mechanical and the decorative structure. These two principles in the progress of the subject were perpetually coming together and then separating. To show how this had happened in Greek and Roman, Romanesque and Gothic architecture, would be too long a story; and he must conclude with thanking the President for the honour done him, and wishing success to the study of architecture, both in the world at large and in the Universities of this country.

And then, at nearly the close of the dinner, a toast was given to "The Royal Institute of British Architects and the health of its distinguished President, Professor Donaldson."

Professor Donaldson acknowledged the compliment, alluding to the rumoured proposal for the extension of the number of members of the Royal Academy, deprecating the idea of a further lay element until the suggested artistic education at the universities had better qualified amateurs to judge of the arts they were to direct and foster, and congratulating the Royal Academy upon the idea of admitting foreigners to its honours,—a principle which had been most advantageous to the Royal Institute of British Architects, which numbered seventy eminent Continental architects as honorary and corresponding members, and every three years awarded, with the sanction of her Majesty, their gold medal to a distinguished foreigner. He had that week delivered the gold medal at the French Embassy, to be forwarded by the ambassador to M. Viollet-le-Duc, the well-known architect, and writer on this art.

THE ARCHITECTURAL ASSOCIATION.

THE ordinary meeting of members was held at the House in Conduit-street, on Friday, the 29th ultimo. The president, Mr. T. Roger Smith, occupied the chair.

Mr. E. C. Lee, Mr. King, and Mr. James Cooper, of 61, Bartholomew-close, were, on ballot, elected members of the Association.

The Chairman announced, that on an early day the members of the Association would be enabled to pay a visit to St. Paul's Cathedral, when they hoped to have the valuable assistance of Mr. Penrose and of Mr. Blashill, in their examination of the building. He also drew attention to the circumstance that the voluntary examination class would, until further notice, hold their meetings on Monday evenings instead of Tuesday evenings, as heretofore.

The Chairman announced that, at the meeting on the 13th instant, for special business, it was the intention to propose two amendments to the rules, of which it was desirable that members should have notice. One was, that in future the names of candidates for admission should be put to the meeting, and their election carried by a show of hands instead of ballot, unless in cases in which any member might call for a ballot. The object in view was, to save as much time as possible for other business. The other proposed amendment of which notice had been given would be to change the time of meeting from half-past seven o'clock to half-past nine, instead of, as at present, from eight to ten o'clock.

A member reminded the meeting that the desirability of changing the time of meeting had been already discussed, and that the majority had expressed themselves unfavourable to the proposed change. In his opinion, it would not carry out the object in view (whatever that might be), because, as a general rule, the members would not come until eight o'clock, and in all probability would not leave until ten.

Mr. Mathews (Hon. Sec.) said he had received a letter from the Royal Institute of British Architects requesting that the following resolutions, agreed to at a meeting of the council of that body, held on Monday, the 18th April, might be brought under the notice of the Association:—

"That the subject of architectural education, as suggested by Mr. G. G. Scott, is well worthy of the attention of this Institute.

That the following societies be requested to depute certain of their members to form a committee, in conjunction with this Institute, for the consideration of the subject: Architectural Museum, four members; Architectural Association, four members; Architectural Exhibition, four members.

That the following members of the Royal Academy be requested to assist as members of the committee, viz.—Messrs. S. Smirke, P. Hardwick, E. M. Barry, E. W. Cooke, and R. Westmacott.

It was also resolved, that certain members of this Institute be appointed to represent it on the committee; and also resolved, that certain members of this Institute, having acted as examiners and moderators in the voluntary examination, be also appointed members of the committee."

Mr. W. Papworth then read a paper on English Architecture from the Accession of Henry VIII.

At the conclusion—

Mr. Blashill, in moving a vote of thanks to Mr. Papworth, said the history of architecture in England, since the Reformation had not been so much studied as it ought to have been. The art generally might not be of a high order,

but the architects worked under disadvantages such as we did not now experience, and probably succeeded in representing the general taste and feeling of the age in which they lived. In this view their works were entitled to respect, and ought not to be lightly destroyed. Many well-known examples were admirable in design and construction. Amongst others less generally admired and appreciated, he remembered hearing Mr. Petitt (himself an admirer of the Gothic school) give high praise to the arrangement of arched openings in St. Luke's Hospital, which praise was well deserved. The drawings exhibited that evening by Mr. Papworth were extremely interesting, and the Association was much indebted to him for having placed them at their disposal that evening.

The Chairman, previously to putting the vote of thanks, remarked upon the characteristic research which Mr. Papworth had brought to bear on a subject which was but inadequately represented in the literature of architecture. The paper which they had heard read was especially valuable to the student of architecture, and he hoped the Association would have an opportunity of studying it more at leisure.

The following gentlemen were then appointed as delegates to join the committee, as suggested by the Royal Institute of British Architects, to consider the subject of the Artistic Education of Architects:—Mr. H. Christian, V. P., Mr. Blashill, Mr. J. D. Mathews (Hon. Sec.), and Mr. Edis.

The next subject for the Class of Design will be the "Entrance door to a gentleman's house."

STATE OF ANNE HATHAWAY'S COTTAGE.

MR. JOHN ELLIS, architect, writes:—I was glad to read your remarks respecting these cottages and their present state. Will you allow me to inform your readers that I have been for some time past endeavouring to obtain the amount required to purchase this property complete, with its gardens and orchard, and to remove the modern work, as far as possible, attached to the three cottages, and by so doing restore it to one house, as it was originally built. I should be happy to receive and acknowledge any subscriptions for this object.

TELEGRAPHIC PROGRESS: THE NEW ATLANTIC CABLE.

SEVERAL gentlemen were lately invited by the directors of the Telegraph Construction and Maintenance Company to inspect the process of manufacturing the new Atlantic telegraph cable, now being made by them at the Gutta Percha Works, City-road, for the Atlantic Telegraph Company. Among those who accepted the invitation were the Marquis of Tweeddale, Professor Wheatstone, and others. One of the improvements in the cable is in the mode in which the gutta-percha coating is applied. Some time ago Mr. Chatterton discovered and patented a compound that is said to have the property of causing the coatings of gutta percha to adhere firmly, without the injurious use of naphtha, so as to form a completely solid core. The wires having been formed into a strand, and six wires being twisted round a central one, they are passed through a vessel containing Chatterton's compound, and are then covered with their first coat of gutta percha, about the eighth of an inch thick. After having been examined, by hydraulic pressure and by hand, the core receives another coat of Chatterton's compound, and then another layer of gutta percha; and so on, until it has attained the thickness of a little more than half an inch in diameter. It is then covered with ten solid wires drawn from Webster's & Horsfall's homogeneous iron, each capable of sustaining a strain of 1,000 lb., at which strain it only stretches 1 per cent. These homogeneous iron wires are surrounded separately with five strands of Manilla yarn, saturated with a preservative compound, the poisonous qualities of which have been found by experiment to prevent its destruction by insects, shell-fish, &c.; and the whole are laid spirally round the core, which latter is padded with ordinary hemp, saturated with preservative mixture. The weight of the cable, when completed, is 35¾ cwt. per mile, when weighed in air; but its specific gravity is said to be so little that it is capable of bearing eleven miles of its length when in water, a strain it is impossible it should ever be put to,—the deepest water encountered in laying the old cable being less than 2½ nautical miles. The company have made arrangements by which they can turn out fifty miles per week of the finished cable.

SOCIETY OF PAINTERS IN WATER COLOURS.

THE "*Old* Society," as it continues to be called, has an excellent exhibition, and the public have shown their belief in this by purchasing already nearly all the pictures that form it. It is worth while noticing, as serving to indicate the amount of encouragement now given to artists, that of the 351 works sent in by the members, more than 100 were sold before they came there; two of them, namely, Mr. John Gilbert's "Battle of the Boyne," and Mr. F. W. Burton's "Meeting on the Turret Stairs," realizing 1,100*l.*, and the remainder, we may safely say, 3,000*l.* more. Of those that came in unsold, nearly 2,000*l.* worth was disposed of at the private view. At the Water Colour Institute, pictures were sold on the private view day to the amount of 1,100*l.*, irrespective of sales beforehand: and at the Society of British Artists, Suffolk-street, the purchases, we believe, amounted to about 3,000*l.* What sum of money the sold pictures now forming part of the Royal Academy Exhibition represent, it would take some time to discover. Some thousands of pounds provided by the Art-Union of London have yet to go into the market; and we have left unspoken of the British Institution, the Ladies' Exhibition, and the French Gallery.

We return to the Old Water-Colour Society's Exhibition, merely to advise our readers to go and see it. We hear talk of the establishment of a third Water-Colour Exhibition, for the works of artists who are not members of the Societies.

A GLANCE AT THE DESIGNS FOR THE PROPOSED EXETER MUSEUM AND ALBERT MEMORIAL.

THE following are simply descriptive notes of the various designs submitted in competition for the proposed Exeter Museum and Albert Memorial, containing a free library and art school. These designs are exhibiting in Paul-street:—

No. 1. "Non sibi sed patriæ" (Mr. F. Boreham, London). A freestone exterior, the angles formed by large rusticated pilasters; windows twin lights, in circular arches; a classic cornice, with large modillions; a central block at the chief entrance, terminating in a rounded hipped dome. The museum cleverly represented in an interior view.

No. 2. "The righteous shall be had in everlasting remembrance" (Mr. E. Appleton, Torquay). A red brick exterior, with white arches to the windows, circular in the soffit, and pointed above; group of sculpture on a plain slab, over the entrance: a large cornice and perforated parapet of freestone run throughout: above this curb roofs appear. The museum occupies about half area; the art school is over it, on second floor.

No. 3. "Evocatus paratus" (Mr. F. Bakewell, Nottingham). A Classic design; a series of bold, blank arches, carried on red marble columns, in the first floor, with raised panels in stone: a cornice and balustrade conceal the roofs. This design has low wings at the ends, introduced with good effect.

No. 4. "Angelo" (Mr. Henry Lloyd, Bristol). Three tall domes, the angle one coupling with another on the short elevation; the summits adorned with ironwork; the front diversified with marble shafts, in Classic style. Over the columns are circular pediments, and other circular pediments in the domes are to be filled with sculpture: the roofs between the domes are concave and hipped.

No. 5. A quatrefoil in a circle. Obtained the first (50*l.*) premium. A design in Decorated Gothic (Mr. John Hayward, Exeter). A projecting centre forms the entrance through three good pointed arches, springing from marble shafts. This centre diminishes in bulk at a steep pitch at the roof level, and forms the base of a tower, terminating in a hipped roof crowned with ironwork. In the sides of this roof chimneys appear with good effect. The ends of the Queen-street front advance slightly; and the steep pitch of the tower base is repeated with good effect in the two gables over these projections. These gables, and the front generally, are treated with a very artistic arrangement of bold trefoiled windows, showing much variety of design, the glass kept within. The material is chiefly red brick. In plan the museum is to the right of the entrance, the free library left, and art school apartments are on the left of the upper floor.

No. 6. "Alberti" (Mr. E. C. Pressland, Taunton.) A churchlike design, having at the angle a tower with open steeple, carried on coloured marble shafts. The school of art to the left, one story in height.

No. 7. "Excelsior." A plain production in red brick.

No. 8. "Argus" (Mr. W. Dey, Exeter). Elevations in three stories, arched windows alternating with Corinthian columns attached.

No. 9. "In Memoriam" (Messrs. Walter & Ridge). A red brick front; an arcade without windows on first-floor; the arched recesses filled with patterns in dark brick, and coloured decoration in the arches. A central tower and spire-like roof over the entrance. The roofs are truncated to light the museum, which extends over the principal portion, and the tower forms a lantern to the museum.

No. 10. "Utilitas." Gables varied with straight parapet, in Paul-street front; a square tower, two or three large windows, with plate tracery. A picturesque design.

No. 11. A brick design, with battlemented small turrets, at different levels; stepped gables and battlemented parapets. (Messrs. Rasch & Marsh, Chelsea.)

No. 12. "Nota Bene." A plain brick design, with pointed windows; an advanced porch, with double doorway.

No. 13. "Exonius." A plain Doric block, with tetrastyle portico of small projection and pediment on Queen-street front. One range of windows on the ground-floor, high parapet with piers.

No. 14. A triangle in a circle. Classic composition; a good perspective. A tetrastyle pedimented projection of half columns, and projections at the ends of the front, with columns corresponding from the receding intervals; small porticoes or portals, with circular pediments in advance. The upper tier of windows has rustic quoins, which are prolonged as strings in the central compartment.

No. 15. Second premium,—"Semper fidelis" (Mr. J. Philpot Jones). Bold, well-executed elevations and perspectives.

Design No. 3, the premiated design. Classic arched windows above and below, in red brick, façade relieved with freestone. High French roof in centre, and projecting frontispiece, having Corinthian pilasters coupled, connected with a cupola,—a statue in a central arch, and bust in the tympana of the arched windows.

No. 1 (same Architect). A different design, having a third story faced with a blank arcade, and high central tower and roof. The windows arranged in triplets. Here are three entrances, one to each department of the edifice.

No. 2 (same Architect). The ends of the front run up flush into towers, roofed with bold curb roofs over a series of pointed arches and shafts. The windows bold pointed arches, with circular medallions in the arches. The central portion of the front is an open arcade of pointed arches; over the centre a tower with pinnacled turrets, sailing out near its summit.

No. 16. Angel carrying device, "In Memoriam" (Mr. W. F. Cross, Exeter.) A Classic design, with much detail, Corinthian columns in marble to three pediments in the Queen-street front. This design was commended for the internal arrangement.

No. 17. "Memoria Pii Æterna" (Messrs. Foster & Roper, London). A bold Gothic design, spiritedly etched. A tower at the angle, with pyramidal roof, and smaller roof over the pilaster projections; square-headed windows effectively used. The entrance is through this tower.

No. 18. "Experientia" (Mr. H. S. Snell, London). A Classic design, a range of large arched windows, predominant with Corinthian pilasters to mark the entrance and the flank projections: a balustrade and vases form the sky-line: a large museum, roofed with glass, at back.

No. 20. A Greek cross (Messrs. R. & W. Best, Exeter). A Classic design; large square windows in the upper floor, alternating with Ionic columns attached, standing on corbels; the ground-floor windows arched; a central dome springing from a tambour of alternating arched lights and

Corinthian columns: a domed lantern surmounts the dome.

No. 21. "In spe laboro." Central tower on Queen-street front, in the Belgian style; two long hipped roofs; twin Decorated windows.

No. 22. "Experiar" (Mr. G. B. Nichols, West Bromwich). Very ornate elevations; Pointed arched windows, with medallions in tympanum to be of della Robbia ware; twisted shafts on the quoins; much surface decoration in Minton's tiles; in centre a large canopy and statue of the Prince; a bold cornice with consoles throughout.

No. 23. "Commodum Experiar" (Mr. G. R. Redgrave, Kensington). The ends of the front advanced, and formed as low-roofed Italian pavilions raised above the central mass: the wings have lanterns for lighting; a double range of windows, and much tile and coloured decoration to the projecting angular portions: the ground story has alternate courses of dark red and freestone.

SCULPTURE AND THE ROYAL HORTICULTURAL SOCIETY.

A communication having been received from the secretary to the Sculptors' Institute, objecting to the rules proposed for this year's exhibition, the council directed the following letter to be sent in reply:—

"I am directed by the council to inform you that they have received your letter, stating that the Institute of Sculptors decline to take part in the proposed exhibition of sculpture, and have seen a printed circular to the same effect which has been brought before them.

The council think that there must be some misunderstanding on your part, as the object of the council has been to promote the interests of all parties and the progress of the art.

The council have been given to understand that the paragraphs of their circular numbered 4 and 6 have been specially objected to by the Institute, on the supposition that the Society desired to obtain a plaster cast, with the view of divesting the sculptor of the execution of it. The council had no such wish or intention. They desired simply to have it understood, beforehand, that, in purchasing a cast, they acquired the power of having it executed in different materials, should they see fit, having in view especially the use of terra-cotta. And they would be quite content, if more agreeable to the artists, to have simply the right of turning the work into terra-cotta; the sculptor himself undertaking the manufacture of the terra-cotta specimen, or not, at his pleasure.

The council cannot suppose that the Institute set themselves against the reproduction of works in terra-cotta, which artists of the Middle Ages and sculptors elsewhere in Europe at the present time are accustomed to execute.

As respects the execution of plaster models in marble and bronze, it may remain absolutely in the hands of the artists, if they prefer it; and those who would prefer not to mention prices need not do so.

The council conceive it might be a subject for regret that in the proposed International Exhibition the Institute of Sculptors, as a corporation, should hold themselves aloof."

PARLIAMENTARY.

National Gallery.—Mr. Heygate asked the First Commissioner of Works whether the scheme for erecting a new National Gallery at the rear of Burlington House, and which was last year stated by the First Commissioner of Works to "have been for a considerable time under the consideration of the Government," had yet been approved; and, if not, to what national purposes it was proposed to devote the estate purchased for the nation in 1854, at a cost of 140,000*l.*, and now occupied by Burlington House and gardens. Mr. Cowper said the Government had determined upon proposing to Parliament an estimate for the erection of a National Gallery upon the vacant ground in the rear of Burlington House. That estimate was now in course of preparation, and would shortly be laid upon the table.

Statue of Cœur de Lion.—Mr. Hankey asked the First Commissioner why the bas-reliefs intended to be placed on the base of the statue of Richard Cœur de Lion, in Palace-yard, had not been so placed; and whether he would communicate with Baron Marochetti, and have them done at an early period. Mr. Cowper was understood to say that the matter was still under consideration.

Metropolitan Sewage.—A select committee to inquire into any plans for dealing with the sewage of the metropolis and other large towns, with a view to its utilization for agricultural purposes, has been appointed.

Public Monuments in the Metropolis.—Mr. B. Cochrane has given notice that he will, at an early day, call attention to the state of our public monuments and statues.

Law Courts.—Mr. A. Mills asked the First Commissioner of Works when the Bill for the Concentration of the Courts of Justice, which, on the 22nd of April, he stated would be brought forward in a few days, would be introduced by the Government. Mr. Cowper said the re-introduction of the Bill for the purchase of the site, of which he had charge last session, must depend upon the introduction of another Bill for supplying the funds, which would be introduced by another member of the Government. He was, therefore, unable to give the information asked for by the hon. gentleman.

BRISTOL SOCIETY OF ARCHITECTS.

The annual meeting of the members of this Society took place on May 2, in the Architects' Room at the Bristol Academy, Mr. A. C. Fripp, vice-president, in the chair.

The Secretary (Mr. Phipps) read the committee's report, as follows:—

"The council, in this their report for the session 1863-64, are happy to state that the prospects of the society are most encouraging. During the summer of 1863 three excursions were organised. The first took place June 11th, and was attended by upwards of twenty-five gentlemen. Horfield, Almondsbury, Thornbury, Cromhall, Iron Acton, and Winterbourne were visited, and papers were read by the president and Mr. Godwin. The second excursion was to Exeter, on July 9th, where Mr. Godwin lectured upon the cathedral. The third and last excursion was to Llandaff, in August, where the cathedral was commented upon and explained by Mr. Fripp. During the winter lectures have been delivered by Mr. S. B. Gabriel, on the Pantheon; Mr. Ponton, on "Taste;" Mr. Godwin, "Sister Arts as applied to Architecture;" Mr. Phipps, "Monumental Brasses;" Mr. Crisp, "Ventilation;" Mr. Atkinson, "Fresco Painting;" Mr. Masters, "Hotels." The number of amateur members and students has been increased during the past year. It is mainly to the latter class of members that we must look for a continued vitality: every architectural student in Bristol and the neighbourhood should be urged to join our body. To aid the students we have adopted measures with a view to facilitate their preparation for the examinations organized by the Royal Institute of British Architects, which every student who aims at a status in his profession must now pass. They are happy to be enabled to chronicle the success of one of their members, Mr. W. V. Gough, who passed his examination in London with credit, and they hope that many others from this neighbourhood will follow his example, and prove as successful. Another effort that has been made for the benefit of the student members was the offering a prize for the best drawings of a chimney-piece and timber roof about to be taken down in the contemplated destruction of the Angel Inn, High-street. This prize has been gained by Mr. W. V. Gough, and a second premium has been awarded to Mr. Hannaford. The drawings are exhibited in the Architects' Room for public inspection. The artists following the sister art of painting, being members of the Academy, are also honorary members of our society. Special invitations to our meetings have been sent to them, in the hope that their presence would prove a mutual advantage. The council regret that, with a few honourable exceptions, these members have shown no sympathy, either by contributing papers or by their presence at the meetings. The report then referred to their relations with other architectural societies—the Royal Institute of British Architects and the Architectural Alliance (which embraced a number of provincial societies)—for the purpose of regulating professional practice, and raising the standard of education for the profession generally; and their labours were proving successful. The officers for the present year are:—President, Mr. P. W. S. Miles; Vice-President, Mr. S. C. Fripp; Hon. Secretary and Treasurer, Mr. C. J. Phipps, F.S.A.

On the motion of the chairman, the report was unanimously adopted.

Various votes of thanks were passed, and the Society arranged that their annual dinner should take place in Gloucester.

NEWS FROM SCOTLAND.

Edinburgh.—The seat-holders in the area of St. Mary's church, Bellevue, have long felt incommoded—especially during the prevalence of sunshine—by the strong light which shone directly in their faces through the two large windows situate on either side of the pulpit at the west end of the church. As a cure for the evil, it was lately suggested that stained glass should be substituted for the common glass with which the windows were filled; and a member of the congregation, Mr. Crabbie, Royal-terrace, having offered to subscribe 25*l.* towards the expense, a subscription was set on foot amongst the congregation, whereby a sufficient sum was speedily realised. The execution of the windows was intrusted to Mr. F. Barnett, of Leith, and they are now completed and placed in their proper position. The style in which the windows have been executed has been termed Norman-Mosaic. The borders, which are of great breadth, are Norman both in design and colour, with delicate pink leaves peculiar to that style. The Scriptural compositions in the centre of the windows, are St. Paul preaching at Athens, and John the Baptist preaching in the Wilderness. Above and beneath the Scriptural subjects are two large geometric figures of a circular form and symmetrical design. The intervals betwixt the outer borders and the leading objects are filled in with similar ornamentation, all partaking of the Norman character. To complete the general effect, it is suggested that the two smaller windows on either side of the large ones should be filled in with stained glass.——A movement is in progress for the erection of a new Episcopal church, in the south-western district of the city.——The scavengers' strike still nominally continues, but men are being brought from Glasgow and Manchester, to replace those on strike, and farmers are carrying off the refuse from the streets in large quantities. One half of the old nightmen, besides, have returned to work.

Perth.—A preliminary meeting of a private nature has been held in Dunkeld, for the purpose of considering whether a statue should be erected in memory of the late Duke of Athole. The Earl of Mansfield presided, and there was a good representation of aristocracy and landed gentry of Perthshire. The resolution agreed on did not transpire, but a public meeting on the subject will, ere long, be held. This movement is quite distinct from the proposal to place a memorial cairn on the summit of Craig-y-barns.

St. Andrews.—The contracts for the erection of a new and more commodious place of worship for the United Presbyterian congregation here, have just been entered into, and the erection is to be proceeded with immediately. The plans have been prepared by Messrs. Peddie & Kinnear, of Edinburgh, and the cost as contracted for will be about 2,100*l.* The site is at the south-west corner of the park containing Abbotsford-crescent, Hope-street, and Lockhart-place.

Forres. The contracts have been taken for a new Episcopal parsonage and school at Forres. Mr. A. Fraser, Nairn, has the mason's work; Messrs. Smith & Son, Forres, the carpenter's work; Mr. A. D. Cameron, Inverness, the slater's work; Mr. A. Ross, Forres, the plasterer's work; and Mr. John Taylor, Forres, the plumber's work. The cost of the buildings is estimated at about 1,500*l.*

IRELAND.

The several banking companies of Ireland seem of late to be sharing a healthy tone happily beginning to prevail: they are extending branches in many directions where such conveniences were unknown before; and in those towns where already they had made a footing they are expanding, and it is found necessary to erect more extensive and more suitable offices for their accommodation.

Among the new bank buildings the most important at present is that now in course of erection in College-street, Dublin, the central office of the Provincial Bank of Ireland. It faces a flank of Trinity College, whose colloquial denomination, for some cause now forgotten, is "Botany Bay." It is also in view from the front of the Bank of Ireland, the National Bank, and Brunswick-street, the busiest thoroughfare of the city. A crooked and intricate site, where formerly stood the Irish Institution, has called for some ingenuity and skill in the planning. The length of the principal front, facing College-street, is 77 feet; its height 61 feet. From this the bank extends backwards to Fleet-street, about 130 feet, where also is a façade of 70 feet long, having an entrance to the runners' office, manager's consulting-rooms, and private entrance to caretaker's residence.

Carving is extensively introduced in the strings and on the windows, especially on those of the first-floor. The material, on this as well as on the principal front throughout, is Portland stone. The principal front is Palladian in general character, with freedom in the treatment of the details.

Over a basement story,—bearing the character of an arcade of boldly recessed and moulded semicircular-headed arches, the principal entrance occupying the middle, at either side win-

dows, and on the left an entrance to the manager's and resident clerk's apartments, rises a complete Corinthian order, carried up the first and second stories, having at either side pilasters, surmounted by a balustraded parapet. In the middle three intercolumniations projecting, with three-quarter columns, support a pediment, for which a group of allegorical sculpture has been designed by Mr. S. F. Lynn, of London, representing the genius of banking, seated high in the centre, receiving on the right from the British merchant the productions of commerce, supported on the background by porters and other representatives of commercial industry; on the left side approached by the representatives of agricultural and other industrial interests.

The cost will be about 21,000*l.*, and the building is to be completed within a year and a half from the present time. The architect is Mr. W. G. Murray, of Gardiner-street. Mr. Jas. Nolan is the builder.

On excavating for the basement, not a few objects of interest to the antiquary came to light; amongst them a perfect jar, pronounced to be Roman; some portions of encaustic tiles of the thirteenth century; bottles and pipes, of shape peculiar to the reign of Queen Elizabeth; a skeleton of a woman, also; and, too deep to be associated with the purposes of the institution which formerly occupied this site, was found a still, embedded in the earth.

In common with most of the insurance companies which hold offices in this city, the Edinburgh Life Assurance Company has lately put its premises through a complete course of renovation.

An entire new front has been erected to it in Sackville-street, somewhat in the style best known as Scottish Baronial. The main portions of the dressings are of Mullingar limestone, light blue in colour. The entrance is through a tasteful porch, having Doric columns introduced. An area by which the basement is lighted is screened from the street by a handsome cut-stone balustrade.

The cost, when finished, will be about 1,000*l.* Messrs. Lanyon, Lynn, & Lanyon are the architects. Mr. W. Doolin is the builder.

Belfast.—The new Presbyterian church, Shankhill-road, has been opened for public worship.

BUILDINGS IN THE CITY.

CARDINAL WISEMAN, in his lecture at the Architectural Museum, said the City produced nearly all the good architecture of this day; and that warehouses, the name of which used to be a sarcastic reproach, are now an object of art, and means of great ornament to the streets that contain them.

City architecture is, indeed, making great strides: numbers of hideous houses are now being pulled down and rebuilt—some in brick, some in stone, some, alas! in compo; but all aspiring—some justly, some vainly—to architectural beauty. Half of Lombard-street is now covered with scaffolding—not the ordinary scaffolding of upright poles with horizontal ones tied across them, but strong beams jointed together in such a way as to bear the vast weight of the masses of stone to be lifted by them. Each joint-stock company (there is very little else now) erects a pile of buildings: each employs a separate architect; and consequently all their buildings are different. This I consider to be the great impediment to good architecture in London, or rather the great impediment which prevents London being an architectural city. Variety is, of course, a great source of beauty; but when buildings stand in a line—a straight line—with no room for projections, there must be a certain uniformity to create a favourable impression on the mind of the beholder. To express my meaning more clearly: the A, B, and C Company build large offices in a street, with, say, three stories above the ground-floor, with columns and entablature to each; the cornice of the ground-floor being about 30 feet above the pavement. The X, Y, and Z Company take the three houses on the left, pull them down, build them up again with a handsome stone front; but as they wish to have more office-room, they build their commercial palace with one more story than their neighbours, though they only build it a few feet higher. They also have an order to each story; but they have five orders to the A, B, and C Company's four, which makes their cornices abut on the capitals of the other in the lowest stories, and on about the middle of the column in the highest. As soon as this pleasing architectural contrast is shown to the good citizens of London, the Q, J, and V Company is formed, and the site on the other side of the A, B, and C Company is taken. Another magnificent pile is erected. This building has one order extending through the first and second stories, that stands on a stylobate, which is the ground-floor, and supports an attic. These three buildings occupy the entire frontage between two smaller streets. A still greater variety is produced by the different projection of the cornices, the different form of the window pediments, the doors, chimneys, &c. &c. This description may seem exaggeration, but it is the truth, nothing but the truth; but I am afraid not all the truth. Some streets, and, indeed, nearly all the streets in London, are of this patchwork. The beauty of many buildings is entirely ruined by it. In Cheapside, towards the west end of it, on the north side, two new buildings are being erected: one, I might say, is finished. The finished one is of brick, small and unassuming, yet of graceful form; and, with its high, metal-crowned roof, is a pleasing object. The other one has about five times the frontage, is much higher, is of stone, is larger in all its parts, and is as bold as its neighbour is modest. The buildings do not join. Between them is another, which is soon to come down and be rebuilt. This, I have no hesitation in saying, will be perfectly different from either of the other two; and the effect of all three will be marred, the smaller, of course, coming off the worst.

And not only do buildings spoil one another in this way, but taking them singly, we shall see how much better it would be if there were more uniformity. Look at Messrs. Sarl's place, in Cornhill, lately bought by the City Offices Company. This is a very striking building; or, rather, it is a small portion of a very striking building: it ought to be about four times the width, and then it would have a good effect. As it is, it looks over into the quadrangle of the Royal Exchange, and has a frontage of about two intercolumniations of the Exchange portico. It has a cornice which projects about one-fourth of its whole width. Look at Messrs. Moses, Son, & Davis's warehouses in Cheapside, that triumph of brick architecture: that, too, has a crowning cornice, not so disproportionate to its width as in the last-named building; but, as it abuts on a building on each side, this cornice is cut off at both ends, and may be seen in section at either end of Cheapside.

Where, in the city of London, is there such a thing as an architectural street? Moorgate-street and King William-street are nearest to it, though the hideousness of their stuccoed pilasters and window-pierced entablatures ruins them. We have innumerable fine buildings, many of them unknown, yet far superior to many in other places the occupants and uses of which make them famous. Our buildings have only one façade, instead of four, as they ought to have. Each block of buildings should be of the same general design; though, of course, much variety can be introduced. When we can effect this, then, and not before, shall we have a fine city. Then will it be one grand whole, instead of some thousands of houses. EX STIRPE.

ST. CROSS HOSPITAL, WINCHESTER.

SIR,—In reference to a notice, in your last number, of the restoration just commenced in the church of St. Cross Hospital, under the direction of Mr. Butterfield, it is but due to inform your readers that we are indebted for this work to the munificence of an anonymous donor, "Z. O.," who has forwarded the sum of 50*l.*, to be applied, under certain conditions, to the interior restoration of the east end of this noble church. Double the amount might most advantageously be expended upon our work; and through the kindness of the bishop of the diocese and other friends, I have already raised 130*l.* in addition to "Z. O.'s" gift; but more money is greatly needed, and cannot be supplied from the funds of the hospital, which, I regret to say, owing to heavy expenses incurred in litigation some years ago, are scarcely adequate to meet the current outlay of the charity. Under these circumstances, should our case attract the notice of any of your readers, who may be able and willing to aid in this really important work, supplemental donations of any amount will be most gratefully received and acknowledged by me, in the name of the trustees.

L. M. HUMBERT, Master of St. Cross.

BATHS AND WASHHOUSES.

SIR,—Will you allow me to call your attention to the comparatively slow increase of public baths and washhouses? There are none yet in the boundaries of the city of London: those in the Euston-road have been done away with; and very many of our large towns and metropolitan districts are still without them. I am not aware that any new ones have been opened in the metropolis within the last seven years. G. S.

MANAGEMENT OF THE INSTITUTE OF ARCHITECTS.

SIR,—Permit me to direct your attention to the "List of the Fellows of the Royal Institute of British Architects," issued by the secretaries of that body. You will observe that they have omitted my name, which will tend to injure me, as no doubt many of the Fellows will append the list in their offices during the year, and of course I shall not be known as a Fellow.

The careless manner in which the Institute has been for some time conducted has astonished me: there has been a loss of that dignity which used to characterise it: the sixpenny and shilling "Sessional Papers" have been under the mark; and altogether, in my opinion, there has been a change for the worse. If I understand the general account of receipts issued, from 1862 to 1863, the sale of the "Sessional Papers" raised 1*l.* 9*s.* 10*d.*!! Not enough to pay the wages of the boy for leaving them at the members' residences.

If the Institute on Monday proceeded to the election with my name omitted, it would be an illegal proceeding.

The short-sightedness of the Institute seems to me remarkable. When the papers read there were published *in extenso* in the journals, they were perused by thousands, not only in this country, but throughout the civilized world, and often translated into foreign languages. The Institute was benefited and respected; and the authors were repaid by the publicity thus given for the time expended in preparing their papers.

Beyond the members of the Institute (500 in all), it required, to raise 1*l.* 9*s.* 10*d.*, received during one year by the sale of two-shilling, one-shilling, and sixpenny sessional papers, about *twenty* purchasers,—and perhaps these were the authors themselves, to give to their friends.

The sooner that the Institute relinquishes its small bookselling business the better for the credit of the profession. The promoters of it may rest assured that they have signally failed.

If, by the publicity formerly given to the proceedings, one Associate only was obtained, the Institute was much more benefited than by the sale of the sessional papers during the whole year. W. P. GRIFFITH.

ARCHITECTURE AND THE HUMAN FIGURE.

IT is surely no particular compliment to architecture to suppose that it is necessarily incomplete unless it be further adorned by painting or sculpture—one if not both of them. For entertaining a worthier opinion of architecture as an art capable of exhibiting abstract unborrowed beauty, peculiar to itself alone, I shall, I trust, be forgiven, even if by no one else, at least by you.

Until it be explained to me,—if explained it can be,—I am utterly unable to perceive any sort of affinity between skill in "figure drawing" and talent in eumorphic design, either as regards general composition or detail. Nor have I ever met with any one who has been at all more *clairvoyant* in the matter than myself. If indeed it were customary for the same individual to be employed in the double capacity of both architect and sculptor, or in the triple one of architect, sculptor, and painter, and show himself, like Cerberus, "a leash of gentlemen rolled into one," the case would be widely different from what it is at present, when, under actual circumstances, it is surely quite as much as can reasonably be expected of the architectural student if he sedulously labours to acquire proficiency and shows himself an expert in his own proper immediate walk of art. By all means allow him to *sympathise* unreservedly with other art in all its various ramifications; but he who aims at universality in literature or art is likelier than not to achieve nothing higher than mediocrity. The few exceptional instances that can be brought forward to give a colour to the contrary argument serve only to prove the rule.

Mistaken, possibly, I may be; and those who disagree with me will, of course, say, if only in self-defence, that I am most grossly so; and quietly wrapped up in what they are at liberty to call a "surtout" or "dreadnought" of self-conceit; or, if it can be fairly and clearly shown in what way a perfect knowledge of the human figure conduces in any way towards accomplishing an architect in his own quite opposite walk of art, by all means let the proof be produced. But until we obtain such proof or explanation we

surely are at liberty to suspect that one cogent reason for its not forthcoming is that it cannot be found: the door cannot be unlocked, because the key can nowhere be discovered. How exceedingly unlucky! In the meanwhile, sceptics, like myself, are left at liberty to doubt if the late *Charles* Barry would have been at all a more accomplished architect, had he, in addition to his own genius, possessed that of the gifted but also ill-starred *James* Barry.

Finally, with respect to the beneficial influence of the study of the human figure upon architects—calculated rather to dissipate than concentrate the architectural student's ideas upon his own proper art—it may be observed, that such being the real state of things it ought, as an inevitable consequence, to follow, that an anatomist or a student of the life figure ought to have the keenest perception of the beautifully proportioned in architectural design.

Art-Lover.

NON-LIABILITY OF PAVIORS FOR ACCIDENTS TO CARELESS PASSERS-BY.

In the Southwark County Court, on April 18th, a case (Wagstaff v. Booth) of considerable importance to contractors for public works, as well as to the public generally, was decided.

The plaintiff, desiring to go from Blackfriars-road to Suffolk-street, Borough, chose, as his shortest cut, to proceed along the new Southwark-street, then under formation, and fell over an inch water-pipe laid across the footway, and injured himself, and for this he claimed 30*l.* damages from the defendant, who was contractor for the paving works of the new street. The facts were not disputed; but it was proved that the accident took place in broad daylight; that the works were in active progress at the time; and that the street had not then been dedicated to the public.

The Judge was of opinion that a contractor doing work of the kind in question had a right to suppose that there would have been no public user; that there was no negligence in the use of the place in the particular way which caused the accident; and that a person who chose to walk along a way which was not complete was bound to take more than ordinary care.

The plaintiff was nonsuited, with costs.

CASES UNDER BUILDING ACT.

FINE FOR NOT GIVING NOTICE.

At the Thames Police Court, Mr. Mitchell, builder, appeared before Mr. Partridge, to answer a summons taken out for the appearance of his partner, Mr. Reader, of Grafton-street, Poplar, and which charged him with neglecting to give notice in writing to Mr. J. H. Good, the district surveyor, of an alteration in the Guy Earl of Warwick public house, and the situation, area, and intended use of the building.

Mr. Partridge said the summons was against George Reader, and he could not recognize the gentleman before him, or hear him, unless he agreed to pay any penalty that might be imposed.

Mr. Mitchell said if his partner was fined the money should be paid.

Mr. Good said that he saw alterations going on at the Guy Earl of Warwick, under the direction of the defendant. The floor was bodily lowered, the story-posts which supported the front of the house were lengthened, and other alterations effected. They were putting a new front into the lower part of the house. He had received no notice, in writing or otherwise, of the alterations. The words of the Act were, "Shall give notice of any work."

Mr. Mitchell said the firm to which he belonged had no desire to evade the law, and submitted that no alterations had been effected, only repairs.

Mr. Good.—It is an alteration of a shop-front: the lengths of the story posts have been increased, and the floor lowered. I have not received any notice, and I do not know whether measures have been taken for the public security.

Mr. Partridge was clearly of opinion the defendant had violated the law, and that before he commenced making the alterations in question he ought to have given notice to the district surveyor. It was of the highest importance to the public that the regulations of the Building Act should be observed. The full penalty for the omission of which the defendant had been guilty was 20*l.* He inflicted the mitigated fine of 5*l.* and costs.

CHURCH-BUILDING NEWS.

North Pickenham (*Norfolk*).—The church, in this parish having long been in an unsound state, it was determined to rebuild it, and the work was commenced in May last year. On the 14th April, it was brought to a completion by the consecration of the new fabric. The nave, aisle, and chancel have been entirely rebuilt. The chancel had been previously shortened, but is now restored to its original length. The Decorated style of architecture has been adopted from the plans of Mr. D. Male, of Kensington, architect, whose design has been carried out by the contractor, Mr. William Brown, of Lynn. The new roofs are of deal, stained and varnished. The pillars and arches are also new, of Casterton stone. The windows are filled with Powell's tinted glass, having a border of leaves. The seats are of English oak, open throughout, and 2 feet 10 inches in height. The pulpit and lectern are enriched, the former with carvings by Rattee, of Cambridge; the latter with foliage, the work of Mr. Sporle. The floor of the chancel is of Minton's encaustic tiles. Provision has been made for lighting the church for evening service, by means of three coronæ and other appliances in polished brass, provided by Messrs. Hart, of London.

Derby.—The chief stone of St. Andrew's Church, Litchurch, has been laid. The edifice is larger than most of our modern parish churches, and consists of a nave and chancel with north and south aisles, and a steeple at the west end of the north aisle of the nave. The chancel has a semi-octagonal apse projecting beyond the east walls of the aisles, and the south aisle of the nave has a porch in its western bay. There are three entrances to the church, viz., a double doorway in the west wall of the nave, the doorway in the south porch, and a small doorway for the clergy at the east end of the south aisle of the nave. The tower has four stages connected by a circular stone staircase in the east wall. The tower abuts on the boundaries of the site at the junction of Hulland-street with the London-road. It thus does not encroach on the body of the church, but occupies what would otherwise have been rather an awkward corner of waste ground. The church is being built from the designs of Mr. George Gilbert Scott, by Messrs. Thompson & Tryer, of Derby, under the superintendence of Mr. W. Conradi, the resident clerk of the works. The amount of the contract is about 9,100*l.* The schools are two stories high, and built of brick, with stone dressings to the windows, doors, buttresses, gables, and chimneys: the roofs are covered with tiles, and there is a small bell-gable on the gable of the south front. These schools, &c., were built by Mr. Wood, of Derby, from designs by the Rev. S. Andrew, of Lichfield.

Collyhurst.—The Albert Memorial Church in Queen's-road, Collyhurst, the erection of which is just completed, has been consecrated by the Bishop of Manchester. The foundation stone was laid on the 6th of June, last year. The site for the church, as also for the schools adjoining it, erected by Mr. R. Gladstone, was the gift of Sir Oswald Mosley. The church consists of the nave, 90 feet 9 inches, by 46 feet 4 inches; chancel, 20 feet 3 inches by 21 feet 6 inches, with organ chamber on south side and vestry on north side. The style is Early Decorated. At the west end are three entrances, one through a large doorway under the centre window, and one through the lower and corresponding one on the other side; but these latter will be used chiefly as entrances to the gallery, which is proposed to be erected at some future period. There is also an entrance under the transeptal tables on the north side. The building is of seconds bricks, relieved with bands of blue Staffordshire bricks and white headers. The dressings are of Hollington stone. The slating is in alternate bands of different tints. The roof is in one great span, open to the ridge 48 feet from the ground. The absence of columns gives an uninterrupted view to persons in all parts of the edifice. The seats are open benches with inclined backs, and divided by a centre and two side aisles, paved with Minton's encaustic tiles, of a plain character. The tiling to the chancel is more elaborate. The seats for the choir in the chancel are of pitch pine, as well as the reading-desk and the pulpit. The vestibules are arranged so as to prevent as much as possible all draughts. The lighting is by means of three sun-lights in the nave and two standards in the chancel, by Mr. Heyworth, of Manchester; and the heating has been provided for by Messrs. Haden, of Trowbridge. The tower, at the north-west angle of the building, is in three stages, terminated with a spire, surmounted with a vane, the top of which is 130 feet from the ground. The church and schools form an ecclesiastical establishment of considerable extent. The original estimate (taken by Messrs. Clark & Jones, builders), for the church was 3,912*l.*, and has not been exceeded; but the committee have expended some 300*l.* additional in tiling and stained glass windows of elaborate design, and great richness in colour, executed by Messrs. Edmundson & Son, of Manchester, to the memory of the Prince Consort. The church has accommodation for 665 persons, of which 233 are free. The edifice has been designed and carried out under the superintendence of the architect, Mr. John Lowe, of Manchester.

Bradford.—A few years ago, the churchmen of Bradford determined to erect ten new churches, in five years, in various parts of that rapidly-extending borough. Five of these churches have since that time been built and consecrated, and the sixth, All Saints', at Horton-green, has now also been consecrated. All Saints' Church is in the Early Decorated style, and built at the sole cost of Mr. Francis Sharp Powell, of Horton Hall, M.P. for the borough of Cambridge. The building, though not yet completed, was commenced in November, 1861, and has so far progressed as to admit of its being opened for public worship. The cost will be about 15,000*l.* Schools, built in a style to correspond with that of the church, have also been built on the adjoining ground, at the expense of Mr. Powell. The plan of the church consists of nave with aisles, north and south transepts, apsidal chancel, with organ-chamber and tower on the south side, and vestry on the north. The aisles are entered by north and south porches, and the south transept by a doorway through the ground story of the tower. The dimensions are:—Nave: length, 98 feet 6 inches; width, 23 feet; aisles, length, 79 feet; width, 11 feet 6 inches. Transepts: total width, north to south, 79 feet; width, 19 feet 6 inches. Chancel: length, 38 feet; width, 22 feet. Vestry: 12 feet by 15 feet. Tower: 21 feet square outside. Height of tower and spire, 200 feet. Height of nave ridge, 60 feet; of chancel, 54 feet; of transepts, 43 feet 6 inches. North and south porches, about 10 feet square inside. The great bulk of the stone has been obtained from the Calverley Wood quarries, worked by the contractor, Mr. Thornton; that used for the inside carving from Sturdy Bank, near Harewood. All the walls inside are of cleansed stone. There is seat room in open pews for over 900; and, including chairs and loose benches, for more than 1,000 persons. The architects are Messrs. Mallinson & Healey, of Bradford. The original design, according to the local *Observer*, owes much to the late Mr. Healey. The plans of the father have, with considerable modifications as to detail, been carried out by his sons. Mr. I. Thornton, of Bradford, has been the contractor for the whole of the works. Mr. D. Kershaw is the clerk of the works. The window-glass has been furnished by Messrs. Heaton, Butler, & Bayne, of London; the carving by Mr. W. Farmer, of London; the metalwork by Mr. Skidmore, of Coventry; the heating apparatus by Mr. Byrne, of Bradford; the tiles by Messrs. Maw & Co., of Broseley; and the fittings for the altar, &c., by Mr. French, of Bolton-le-Moors.

Sheffield.—Wath Church has had the whitewash removed from a few of the pillars, and the stonework restored to its original condition. This restoration has led to an antiquarian discovery. The whole of the interior of the church has, at one time, been painted—at what date it is not easy, it is said, to define. The first, in order of time, consisted of animals, flowers, and human figures. Immediately over that there has been a coat of whitewash; and then over that a coat of painting—water colour. The capitals were painted red, and the arches above them red also. Above this there has been another coat of various colours, and above all several coats of plain colouring. The theory amongst "the oldest inhabitants" is that a certain vicar of Wath fancied the people attended more to the gay walls of the church than to him, and so he ordered these paintings to be obliterated. Possibly the second coating of paint was put on during the temporary revival of Popery in Queen Mary's reign, and was in turn covered by the Reformed clergy.

Miscellanea.

Society of Arts.—On Wednesday evening last, a paper on "The Testing of Chain Cables," by Mr. Frederick Arthur Paget, C.E., was read. We shall return to it for some portions interesting to our readers.

Architectural Exhibition, Conduit-street. On Tuesday evening, Professor Donaldson delivered a lecture "On the Military Architecture of the Middle Ages." The lecture was copiously illustrated by drawings of Raglan, Beaumaris, Chepstow, Conway, York, Hever, Alnwick, and other castles; and the lecturer gave a full and interesting account of the history of the several structures, commenting on their constructive peculiarities and characteristics. Little publicity was given to the commencement of the series, or the attendance would have been more numerous than it was.

GRAPHIC SOCIETY.—At the concluding *conversazione*, to be held on Wednesday, the 11th inst., the Committee expect contributions of the works of their late colleague, Mr. Augustus Egg, A.R.A., and of the late Mr. William Hunt.

SALISBURY CATHEDRAL.—The following letter from Mr. Scott in reference to an article in the *Times*, appeared in that journal on Monday:—"May I take the liberty of saying one word in correction of a point in your interesting notice of the state of the tower of Salisbury Cathedral? The point I refer to is this,—that we have no intention of touching the piers which carry the tower, but only of strengthening the feeble and shattered lantern story above them; and that on the principle of adding strength, while we scrupulously avoid the smallest disturbance of the existing structure."

THE NEWCASTLE HIGH LEVEL BRIDGE.—From the evidence of the engineer-in-chief of the North-Eastern Railway Company, given before the Committee of the House of Commons on the Newcastle and Gateshead Gas bill, we learn that the lower roadway of the high-level bridge, which the company were so reluctant to make, cost them about 50,000*l.*, and yields them a revenue in tolls of about 4,000*l.* a year. It pays, therefore, subject to deduction for collection and maintenance, an annual interest of 8 per cent., a profit which the shareholders would doubtless be glad to reap from the remaining portion of their vast property.

GATE CLIP LOCK.—An extremely simple turnbril latch lock for road, railway, and field gates, patented by Dr. Spratt, seems to offer security against the straying of cattle, and the accidents occasioned thereby on lines of rail. The invention is equally useful on all swing-gates. Where it is desirable to open the thoroughfare and stop access to the rail, the gates may clip across the line, as in this case the posts, at the angles of a square, being equidistant, the latches and fitments will correspond, and therefore lock. The whole mechanism consists of two tumblers, which move inwards, and up to a common centre, and catch the latch between them in a firm grip.

BRIGHTON.—The contractors for the Albion Outfall have again commenced operations upon it. The piping was only laid down to a certain distance, and the process of floating it out was suspended, owing to the favourable season having passed by. Steps are now being taken for laying down the remainder of the piping, not, however, by floating it out, but by erecting a stage over the bed, which will be dredged for it, and from which stage the pipes will be let down into the sea. The making of this stage is now being proceeded with.——Active operations have been commenced in connexion with the erection of the new pier opposite Regency-square.——The Works Committee of the town council have received the following tenders for widening King's-road and Junction-road, in conformity with plans prepared by the borough surveyor, Mr. P. C. Lockwood, C.E.:—

Anscombe	£12,924
Reynolds	11,613
Chappell (Steyning)	11,473
Cheesman & Co.	10,915
Scrivener & White	10,058
Simms & Marten	9,870
Nowell & Docwra	9,499
Sawyer (Dulwich)	9,484
Bennett & Co.	9,339
Aird & Son	9,258

Messrs. Aird & Son's tender was accepted by the committee.

REBUILDING AND REPAIRING OF CATHEDRALS.—According to a Parliamentary return recently issued, 500*l.* were granted for the restoration of York Minster in 1841 by the Ecclesiastical Commissioners, and 2,938*l.* 18s. 10d. for Ripon Cathedral, in 1842. Under the authority of Orders in Council of the several dates given below, the following chapters transferred to the Ecclesiastical Commissioners their corporate estates, in consideration of the annexed sums:—Bristol, June 7, 1862, 6,000*l.*; Canterbury, August 6, 1862, 20,000*l.*; Carlisle, November 10, 1852, 15,000*l.*; Salisbury, October 11, 1861, 10,000*l.*; Winchester, April 16, 1861, 5,000*l.*; and Worcester, November 29, 1859, 15,300*l.*; total, 71,300*l.* With respect to the Chapter of Worcester, it is noted that "the commissioners, being possessed of a lease for lives under the chapter, agreed to pay to the chapter for the addition of two lives, in the place of two that had died, a fine of 5,160*l.*, the chapter undertaking that the whole of it should be appropriated towards the repair of the fabric."

BETHNAL-GREEN.—Another death from *starvation* in this parish,—Elizabeth Bendall, aged 73. The verdict of the jury was, "That deceased was found dead from the mortal effects of bronchitis; and that her said death was accelerated by want of nourishment, clothing, and warmth." Surely some fuller inquiry into the management here is necessary.

THE NEW FREEMASONS' HALL.—We learn from the daily papers that the ceremony of laying the foundation-stone of the New Freemasons' Hall took place on Wednesday, the 27th ult., on the site of the building in Great Queen-street, Lincoln's-inn-fields, in the presence of the Grand Master, the Earl of Zetland, and a numerous body of the craft.

SOCIETY OF ARTS PRIZES.—A correspondent writes,—"Will you kindly hint to the Council of the 'Society of Arts' that much dissatisfaction is expressed by the successful competitors in the late 'Art-workmen's' Competition at the non-delivery publicly of the prizes; and that this *second* delay is calculated to destroy confidence and materially to affect the success of future competitions." Some of the prizes have been delivered privately, we believe.

NORTHERN ARCHITECTURAL ASSOCIATION.—The quarterly meeting of the Northern Architectural Association, was held at the Old Castle of Newcastle, on Tuesday evening, 26th ult., Mr. Pritchard in the chair. The principal business before the meeting was the discussion of the sub-committee's report on the subject of a universal system of measuring.

THE NATIONAL PORTRAIT GALLERY.—On Saturday was issued the seventh report of the trustees of this gallery. Among the donations since the last report are, a marble bust, by Behnes, of Dr. Arnold, of Rugby, presented by the Bishop of Manchester; and a portrait of Woodfall, the Parliamentary reporter, 1745-1803, painted by T. Beach, a pupil of Sir Joshua Reynolds, presented by Mr. H. D. Woodfall. The purchases made by the trustees now amount to 118. They have been increased since the last reports by portraits of Charles Churchill, Queen Catherine of Arragon, Sir Nicholas Bacon, Thomas Stanley, the historian of philosophy; Lord Heathfield, Archbishop Laud, and the Earl of Mansfield. The gallery, instead of being open from twelve to four, will henceforth be open from ten to five, between Easter and Michaelmas, and from ten to four between Michaelmas and Easter, the days of admission being Wednesdays and Saturdays, as before. The trustees renew their protest against the inadequacy of the space at their disposal.

THE TEMPORARY BRIDGE AT BLACKFRIARS.—It was an ingenious device to construct this bridge in two floors or stories, the necessary accommodation for carriages and foot passengers being thereby secured at the least expenditure of space and material. The *City Press* gives some details. The bridge is 990 feet in length, and the upper story is 16 feet above that designed for carriages. The upper story will accommodate foot passengers by means of two footways, each 9 feet in width: the footways of old Blackfriars are only 7 feet wide. The lower floor is 26 feet in width, which is the same width as the roadway of the old bridge. Its foundations are substantial. The lower piles are 18 feet apart, and are driven 10 feet into the bed of the river; and the transverse piles which carry the roadway are 7 feet apart from centre to centre. These parts are braced together with great firmness, so that the vibration common to wooden bridges will be reduced to a minimum. The openings for the river are each of 70 feet span, formed of iron girders 6 feet in depth. As regards the gradients of this bridge, horses have the best of it. The incline of the old bridge is 1 in 24, but for the roadway of the wooden-bridge the same gradient as that of the new Blackfriars-bridge has been adopted, namely, 1 in 40; but, as the footway for passengers is carried 16 feet above the roadway, pedestrians are here placed at a considerable disadvantage: they will, in fact, have to ascend gradients of 1 in 10 at the approaches; but, that difficulty over, the remainder of the journey will be almost a dead level. The first pile of this bridge was driven on the 11th of August last year, and the bridge was finished in a period of less than eight months. The number of piles which support the bridge is 300, and the depth of the timber below high-water mark is 40 feet. Messrs. Rennie & Logan are the contractors, and Mr. Scott is the superintendent-engineer.

BEDFORD SEWERAGE.—The town council having examined the schemes of proposed sewerage works for the Borough, prepared by Messrs. Haywood, Lawson, Stephens, & Usher (the engineers invited to submit plans), have selected the scheme of Mr. John Lawson.

MARSHLAND, SMEETH, AND FEN DRAINAGE.—The Marshland, Smeeth, and Fen Commissioners have laid the first stone of the new sluice now erecting for the drainage of that district. Mr. William Plews is the engineer; and Mr. William Derisley Harding, contractor.

NEW DOCKS AT NEWPORT.—The promoters of the new dock on the east side of the Usk have secured fifty acres of land from Colonel Wood, at a moderate price; but as this is not considered sufficient, negotiations are pending for a further purchase. Messrs. Lavin & Ward, contractors, have visited the port, with the intention of making arrangements for the construction of a new dock on the west side of the Usk, and have expressed a favourable opinion as to the practicability and paying nature of the undertaking.

COMPENSATION FOR LOSS OF MEDICAL PRACTICE.—On Saturday, in the Lord Mayor's Court, a claim was made by Mr. Hutchinson, a surgeon, of Bridge-street, Blackfriars, against the London, Chatham, and Dover Railway Company, for compensation in respect to the loss of his practice and house, owing to the building of the Farringdon-street Extension. The claimant said he had lived thirty-five years in his present house, and he could find no other house suited to him, consequently he had been obliged to move up to Woburn-place. After the case had proceeded some time, an arrangement was come to by awarding the claimant 2,500*l.*

SOCIETY FOR THE ENCOURAGEMENT OF THE FINE ARTS.—Dr. Christopher Dresser delivered a lecture "On Colour: Its Harmonies and Contrasts." He gave in a succinct form a history of the discoveries as to the nature of colours and their progressive combinations, beginning with the three primitive colours, red, blue, and yellow, and then going into their combinations in the secondary and tertiary classes; showing also how by certain rules of proportion, certain combinations of colour, primary, secondary, and tertiary, brought into juxtaposition, would produce a harmonious effect or the reverse. A discussion followed, in which Mr. Hurlstone (who occupied the chair), Mr. H. Tidey, Mr. Dutton, Mr. Wood, and others took part.

ACCIDENTS.—At Leeds, a portion of a house in St. Mark's Villas, Woodhouse-lane, lately fell to the ground, owing to the foundations having been undermined. Happily premonitory symptoms were observed, and thus measures were taken not only to save the property—amongst which was a number of paintings—but to guard against personal injury.——The weights of the Yeovil new town clock, about midnight on Sunday before last, fell with a noise which alarmed the neighbourhood of the town hall. It appears that the weights were suspended by a rope about three-eighths of an inch in thickness—much too small, it is now evident, although the contractors allege that it is of the usual description. The rope broke and the weights fell, breaking through the ceiling of the town-hall, and partially through the floor of the hall, one of the weights having protruded through the ceiling below the floor. The affair has created quite a commotion in the town.

MONUMENTAL.—The first stone of the Yarborough monumental arch has been laid at Kirmington, by the Countess of Yarborough. After the trowel, mallet, and level had been well applied, her ladyship spoke a few sentences warmly expressive of gladness in being solicited to perform this interesting duty, and of all good feeling befitting the occasion. Mr. Flockton, of Sheffield, the architect; and Messrs. Waring, the contractors, were present. A brass plate bears the following inscription, written by Sir Charles Anderson, Bart. (chairman of the committee):—"This foundation stone of an arch erected by the tenants and friends of Charles, second Earl of Yarborough, was laid at their request by Victoria, Countess of Yarborough, April 23rd, 1861."——The sub-committee of the Rowland Hill statue having recommended that an application be made to Mr. Hollins to furnish a design or model, and an estimate of the cost; and that the selection of a site be postponed for the present; this has been unanimously approved, and the sub-committee instructed to confer with Mr. Hollins. The subscriptions exceed 1,200*l.*

DISCOVERY OF ANTIQUITIES AT CHARLTON.—As the workmen in the employ of Mr. S. C. Tucker, builder, were lately excavating the ground at the corner of Bridge-street, Charlton, they came upon a piece of pottery. Mr. Tucker, being on the spot, caused the surrounding earth to be carefully removed, and the result has been the discovery and preservation of some very interesting Roman remains, buried at a depth of 10½ feet from the surface.

TENDERS.

For rebuilding Bull Wharf, Queenhithe, for Messrs. Kibbel & Shepherd. Mr. E. T'Anson, architect:—

Oxford	£9,550 0 0
Lawrence	9,133 0 0
Myers	9,069 0 0

7. THE HOUSE PAINTER, or DECORATOR'S COMPANION: containing a complete Treatise on the Art of House Painting, Graining, and Marbling; including the Origin of Colour, the Laws of Harmonious Colouring, the Manufacture of Pigments, Oils, Varnishes, &c. By W. M. HIGGINS, Esq. Accompanied by actual specimens of Hand Brush Graining and Marbling. Ten Parts, at 3s.; or in boards, 30s.
THE ENGINEERS' and MECHANICS' ENCYCLOPÆDIA, a new and enlarged edition, comprehending Practical Illustrations of the Machinery and Processes employed in every description of Manufacture of the British Empire. Illustrated by upwards of 2,000 Wood Engravings. By LUKE HERBERT, Civil Engineer, &c. The rapid progress of Mechanical Science has developed many of the important facts since the first publication, in 1836, of the present work. The Inventions and discoveries recently made have engaged the assiduous attention of the Editor; for, as the value of each has been tested by experiment, a description was accordingly prepared. By these selections of new articles, and care in the revision of old ones, this edition has now become systematically enriched; so that it may be received as fully and faithfully expressing "the existing state of Engineering and Mechanism, adapted to the wants of Practical Men." In two large 8vo volumes, cloth lettered, price 30s.

EUSTON WORKS, 366 and 368, EUSTON ROAD, LONDON, N.W

A FREEHOLD MANSION TO BE SOLD. The elegant Freehold Mansion may be had at a valuation. There are four reception-rooms, two being 30 feet in length; eleven best bedrooms; stabling for eight horses and coach-houses for two carriages; suitable servants' offices; extensive ornamental grounds, with greenhouses, in all 2a acres; gravelly soil; near Sunningdale Station, South-Western Railway, half a mile from Windsor Great Park, and fifty minutes from the Waterloo Station.—Apply to J. MAY, Esq. Solicitor, 67, Russell-square.

VALUABLE PREMISES.—Large, open SPACE, with an area of 1,230 square yards, TO BE LET, immediately with or without water communication. There is a frontage of 167 feet to the road, situate in a main thoroughfare, one mile north of the Bank. The extension of railways and city improvements, causing such a consequent scarcity of large sites, renders these extremely valuable.—Apply to E. & W. STURGE, Bridge-wharf, City-road, E.C.

DEPTFORD, Kent.—To BUILDERS, ENGINEERS, SHIPWRIGHTS, SMITHS, MANUFACTURERS, and Others requiring extensive Premises or Residences for their workmen, or to whom or individuals wishing to provide improved Dwellings for the Working Classes—The Corporation of Trinity House, having otherwise provided for the inmates of their establishment known as the Lower Ground Almshouses, at the Stowage, Deptford, comprising Twenty-six distinct Dwellings hereby give notice, that they are willing to receive TENDERS for LETTING the said HOUSES on a repairing lease for 21 years or more, as may be agreed. Each house consists of a basement, ground, and chamber story; five having yards and additional offices; and the others can readily have every necessary accommodation added to them. The whole is approached from the street by a centre gateway, and is inclosed within itself as a distinct precinct. These houses are situated in the centre of the large manufacturing districts on the South side of the Thames. They are about, from the Entrances of the Precinct at the ferry, very conveniently situated in relation to the large district of the manufactories on the opposite side of the river, from Mill-wall and the Isle of Dogs to the localities adjoining. For permission to view, apply to Mr. NORTHWOOD, No. 1, on the Premises. The whole are to be Let by Tender, in One Lot, and MONDAY, the 30th of MAY next, is the day fixed by the Corporation for receiving the Tenders.—For further particulars apply at the Offices of Mr. RICHARD SUTER, Architect and Surveyor, 23 Gracechurch-street, E.C. and where a plan of the property may be seen.
F. H. BERTHON, Secretary.
Trinity House, March 28, 1864.

BUILDING LAND at CHITTS HILL, WOOD GREEN, overlooking three different counties, and fronting the high road, eight minutes walk from the station and Alexandra Park, To Be Let for the term of superior Villa Residences, which are in great demand in this beautiful locality. Term, 99 years. Money advanced if required.—A plan may be seen, and particulars obtained, on application to S. HEWITT, Architect and Surveyor, 101, Great Russell-street, Bloomsbury, W.C.

WATERSIDE PREMISES, CITY-ROAD.
MESSRS. FULLER & HORSEY are instructed to LET, on Lease, from Michaelmas next, Extensive WATERSIDE PREMISES, occupying a site of 21,000 superficial feet, situate on the Wenlock Basin, City-road, and comprising a spacious and substantial modern brick built manufactory of two floors, engine and boiler houses, with 50-horse power steam-engine and three Cornish boilers, range of brick built offices, and paved yards with gateway entrances. There is a water frontage of about 277 feet.—For further particulars apply to Messrs. FULLER & HORSEY, No. 13, Billiter-street, London, E.C.

ARCHITECTURE.—An experienced and well qualified Architect and Surveyor is open to an ENGAGEMENT as ASSISTANT or PUPIL, or to prepare general and detail drawings (at home) from sketches. No objection to act as Clerk of Works to any large building in the country. Unexceptionable testimonials and references.—Address, F. Q. 5, Cambourne-street, London, W.C.

TO ARCHITECTS AND ENGINEERS.
A THOROUGHLY practical CLERK of WORKS fully qualified to superintend the erection of any extensive works, is open to an ENGAGEMENT. No objection to go abroad. Reference and testimonials of the highest class. Address, Z. Z. care of Mrs. Green, Four-cross-roads, Twickenham, S.S.

AN ARCHITECT and SURVEYOR, in large practice, has VACANCIES in his Office for ONE or TWO outdoor PUPILS, on moderate terms. Principal instruction gentlemanly.—S. R. Mr Doughty's Newspaper Office, Young-street, Kensington, W.

TO BREWERS and OTHERS.—For SALE, by PRIVATE CONTRACT, a Plot of FREEHOLD BUILDING LAND in the immediate vicinity of the Reading Stations on the Great Western, South Eastern, and South Western Railways, and abutting upon a road which will soon become one of the principal thoroughfares to those Stations. The site is admirably adapted for a good business and a Hotel. Money advanced if required.—Apply to Mr. W. M. WEEDON, Solicitor, Reading.

BUILDING LAND, Reading, Berks.—FOR SALE, by PRIVATE CONTRACT, in lots suited for the erection of private Dwelling-houses, several acres of FREEHOLD BUILDING LAND, forming part of the rapidly improving Western suburb of the Town. The roads on the Estate are excellent. The property is ornamentally timbered, and several portions of it are well fenced in with hedges, and planted with trees and shrubs of many years' growth. Distance from the centre of the Town and three Railway-stations, about a mile. A second Church is being erected in the main estate neighbourhood. Money advanced if required.—Apply to Mr. W. WEEDON, Solicitor, Reading

TO BUILDERS.—Four Acres of FREEHOLD LAND, only three miles from the City, and on a main road a few yards from the new station which the London and Brighton Railway Company have engaged to construct on the line they are now building across the high road known as Queen's road, New Cross, TO BE LET, on Building Leases.—Apply to Mr. BIRKS, 11, Clifton cottages, Clifton-road, Pomeroy street, Old Kent-road, S.E.

IMPORTANT to COAL PROPRIETORS, CAPITALISTS, and OTHERS.—The owners of valuable MINES of COAL, lying within and under a compact freehold estate of upwards of 190 acres, situate about three miles from the important manufacturing town of Blackburn, Lancashire, are prepared to treat for the absolute SALE of the COAL, or to enter into favourable arrangements for leasing the same for a term of years. Good turnpike roads intersect the estate, and the same is within very easy distance of railway and canal. For further particulars apply to Messrs. ROBINSON & SON, Solicitors, Blackburn.

MANUFACTURING JOINERS' and BUILDERS' PREMISES, consisting of Sawing, Planing, and Moulding Factory, and Joiners' Shops—TO BE SOLD, or a LEASE and GOODWILL of extensive PREMISES, admirably situate, near Temple bar, fitted with all requisite machinery, and rebuilt within the last few years, occupied by the proprietor for many years. The steam and machinery at a valuation. Ill-health the cause of sale. Apply in the first instance, to Mr. JAMES BEAL, Auctioneer, 209 Piccadilly, W.

TO BUILDERS and OTHERS.—BROMLEY, KENT.—LAND TO BE LET, for Building, on Lease, for ninety seven years, about half a mile from a railway station and adjoining the town of Bromley. Soil, sand and gravel, with a good supply of water.—For particulars, apply to Messrs. PRESTON & DORMAN, 15, Gresham-street, E.C.

EXTENSIVE GROUND WORKSHOPS TO BE LET, with excellent Dwelling-house attached, well adapted for a Furniture or Cabinet Maker. Separate gateway entrance if required. Rent, 120l a year, or Lease to sell.—Apply to Messrs. LEREW & LEREW, Carlington-street, Hampstead-road, N.W.

NORTH END, FULHAM.—TO BE SOLD, a Great Bargain, in consequence of the death of the proprietor, two LEASEHOLD COTTAGES, and GROUND sufficient to build a third. Price 225l.—Apply to Mr. COOMER, upon the Estate, Wellington road, North end, Fulham.

FIRST-RATE SITES of FREEHOLD BUILDING LAND TO BE LET, on the usual terms, at Lower Norwood, close to the station; at Teddington, very near the station; and at Folkestone, Canonbury, &c.—Apply to Mr EDMESTON, Architect and Surveyor, 5, Crown-court, Old Broad-street, E.C.

MANUFACTURING PREMISES REQUIRED, to Rent, or Purchase if Freehold. Area not less than 1,000 to 1,200 square yards, with steam power, or where it may be used, in Westminster or Pimlico.—Address, A. B. care of Messrs. Rice, Brothers, Auctioneers, 2, Adelaide-place, London Bridge, E.C.

TO BE LET, extensive and commodious BUILDINGS and PREMISES, having both Water Power and Steam Power, within twelve miles of London, suitable for carrying on a large business, in which the advertiser would take a share if desirable.—For further particulars apply by letter, addressed to A. B. care of W. F. Farmer, esq. 17a, Size-lane, London, E.C.

BUILDING LAND.—Several PLOTS TO BE LET on LEASE for 99 years, in the Park, Highgate. One of the healthy situations in the vicinity of London, with extensive and beautiful views. A new church and a railway station immediately contiguous. Sewers and roads on the most approved construction are being made. Gas and water can be readily supplied.—For particulars apply to T. H. WYATT, Esq. No 7, Great Russell-street, Bloomsbury, W.C.; or to Mr. WHEELER, Builder, South Grove, Highgate, N.

BUILDING LAND TO BE LET, on advantageous terms, for 99 years, situate at Merton, Surrey, within ten minutes' walk of the Wimbledon station, or 45 minutes of the City.—The plan of estate can be seen, and particulars obtained, upon application to Mr. EDWIN SHALES, Surveyor's Office, Christ's Hospital, Newgate-street, from TEN to FIVE o'clock.

DARTFORD, KENT.—FOR SALE, Valuable FREEHOLD BUILDING LAND, in plots of 50 feet frontage and upwards, at Dartford New Town, about half a mile from the railway station.—For particulars, apply to A. RUSSELL, Esq. Solicitor, Dartford; or to Messrs. COBB, Surveyors and Land Agents, Lancelot's-inn-fields

WANTED to PURCHASE, a Pair of EIGHT or TEN ROOMED CARCASES, in a good situation. Address, R. K. E. Office of "The Builder."

BUILDING LAND TO BE LET on LEASE, in the Lower Richmond-road, within 4 mile of Putney and Barnes Railway Stations.—Apply to W. R. WOOD, Timber Merchant, Wandsworth.

EXMOUTH.—To BUILDERS, CAPITALISTS, and OTHERS.—Notice is hereby given, that by a recent order of the Court of Chancery, the restriction against leasing for long terms of years, imposed by the will of the late Lord Rolle, and in consequence of which the extensive and beautiful district, situate in the vicinity of the town of Exmouth, and reaching to the villages of Littleham and Bulleigh Salterton, has up to the present time been unavailable for building purposes, has been removed, and the Trustees of the property are now prepared to entertain offers for leasing the Land on LONG LEASES. The advantages of the situation, as regards soil, climate, and beauty of scenery, are well known, as it are so fully recognised as to render it needless to refer to them in any particularly. All communications to be addressed to Messrs. FREKE, CHOLMELEY, & FOR-TER, of No. 28, Lincoln's Inn-fields, London, W.C. Solicitors to the Estate.

TO BUILDERS, CONTRACTORS, and OTHERS.—FOR immediate SALE, a valuable LEASEHOLD PROPERTY, situate with in one mile and a half from the Poole Junction, three from Poole Harbour, and eight from Bournemouth, and known as Upton Pottery, consisting of about 15 acres of Land, under which is a good depth of superior clay for making the best white bricks, earthenware, tiles, and common articles. On the premises are two pipe-kilns, three brick kilns, with sheds, a dwelling-house, and all the necessary machinery.—Apply to G. J. LUSH, Wilton, Salisbury.

BUILDING LAND.—TO BE LET, FREEHOLD, with Registered Title, a PLOT of TWELVE ACRES, situated at Upton Lovell, within five minutes' walk of the railway station. Houses letting at 35l. to 50l. per annum are much needed in this locality, which is only six miles from the Bishopgate and Fenchurch-street stations, and within ten minutes by railway, of Epping Forest. Soil gravel, drainage excellent. The estate is laid out according to special plan.—For part cards apply to Mr KEATES, 140, Strand, and Leighton, N.E.

IPSWICH, Suffolk.—Valuable Leasehold BUILDING LAND TO BE LET, on advantageous terms, eligibly situate on the Great Eastern Railway Station. Houses much in demand in this locality, an excellent opportunity for investment is therefore offered.—Further information may be obtained of Mr. F. BARNES, Architect, Ipswich.

VALUABLE MANUFACTURING PREMISES, fronting the City walls—TO BE LET on LEASE, with early possession, spacious and convenient PREMISES, occupying an area of 5,500 feet, and fitted with 20-horse power steam engine, boiler, chimney shaft, and other valuable machinery, which may be taken at a valuation. There is also a deep well, with an abundant supply of water.—Terms of Messrs. GREEN & SON, Auctioneers, and Estate Agents, St. Michael's-alley, Cornhill.

SEAFORD, near NEWHAVEN, SUSSEX. To Builders and Others—Eligible PLOTS for BUILDING, with full sea view, and compact seaward aspect, TO BE LET, on building Leases for 99 years. The Railway is open in less than a month, and it runs directly into the centre of this beautiful and sheltered watering place.—For plans and particulars, apply to Messrs WM. G. HABERSHON & PITE, Architects, 26, Bloomsbury-square, London, W.C.—Mr. OCKENDEN, Bailiff of Seaford will show the ground.

THE PATENT CONCRETE STONE COMPANY (LIMITED) are prepared forthwith to GRANT LICENCES in each town for the several objects of their Manufacture.

These are.—1st. The Patent Concrete Stone (Ransome's Patent), moulded and not burned; inexpensively made; durable, hard as York stone; applicable to every purpose, both constructive and decorative, for which natural stone is used.

THORN & CO. Stone Merchants and Contractors

LITTLE CASTERTON FREESTONE.
Apply, for prices, &c. to
OCTAVIUS N. SIMPSON, STAMFORD;
and see Specimens at the Office of
Messrs. PINDER SIMPSON & SONS, 29, Savile-row, London, and at the Museum of Practical Geology, Jermyn street, W.
This stone (which is a perfect oolite) is raised in blocks of any portable size, and is about four feet thick in the bed. It will stand ANY WEATHER, is much used for water-works and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed-wise. It works freely with a tooth-saw, and wrought at a cheaper rate than any stone in the kingdom.
*** The above WEATHER STONE is 1s. 9d. per cubic foot, delivered in London.

SLATES.—JONES & CO. have a STOCK of SLATES of different sorts, from the best quarries in Wales. SLABS and CISTERNS delivered at any station in quantities of not less than five tons, from their depôts,

Crucible and Cement Clay, Wholesale and for Exportation.
EVERY ARTICLE MANUFACTURED AT THE ABOVE WORKS.
N.B These goods are supplied to the largest Steel Smelting, Armour Plate, and Crucible Works in the World, to which references can be given on applicat on.

TO BRICKMAKERS.—All Parties who BURN BRICKS in CLAMPS are invited to inspect the NEW MODE of SETTING, patented by Mr ROBERT WHITE, and which may be seen in operation at the Brickfields of
J. B. WHITE & BROTHERS, Erith, Kent.
The advantages of the plan are two-fold.
1st. Nearly all the bricks are burnt into stocks, and the yield of inferior bricks is reduced from 35 to about 10 per cent of the total make, which in itself represents a large permanent saving.
2nd. The bricks are so much improved in colour and soundness as to give them a considerable additional value in the market over common stocks.
Licenses for use of the Patent granted to Brickmakers, on application to the Patentees 17, Millbank-street, Westminster

BRICKS, PANTILES, AND PAVINGS.
J. H. ANDREWS, Wisbech, offers

A prospectus, containing a full description of their action, and numerous advantages, will be sent on application to the Patentees,
G. LEWAL, 5 and 6, PHILPOT LANE, LONDON, E.C.
Agents Wanted.

THE FURNISHING OF BED-ROOMS.
HEAL & SON have observed for some time that it would be advantageous to their Customers to see a much larger selection of Bed-room Furniture than usually displayed, and that the cheapest as well as the most elaborate of the different descriptions of Furniture, it is necessary that each description should be placed in separate rooms. They have therefore erected large and additional Show-rooms, by which they are enabled at once to extend their Show of Iron, Brass, and Wood Bedsteads, and Bed-room Furniture, beyond what they believe has ever been attempted, but also to provide several small rooms for the purpose of keeping complete suites of Bed-room Furniture in the different styles.
Japanned Deal Goods may be seen in complete suites of five or six different patterns, some of them light and ornamental, and others of a plainer description. Suites of Stained Deal Goths: Furniture, Polished Deal, Oak, and Walnut, are also set apart in separate rooms, so that customers are able to see the effect as it would appear in their own rooms. A suite of very superior Gothic Oak Furniture will generally be kept in stock, and from time to time new and select Furniture in various woods will be added
Bed Furnitures are fitted to the Bedsteads in large numbers, so that a complete assortment may be seen, and the effect of any particular pattern ascertained as it would appear on the Bedstead.
A very large Stock of Bedding (HEAL & SON'S original trade) is placed on the BEDSTEADS.
The Stock of Manufactured Goods for the better Bed-rooms and Japanned Goods for plain and servants' use, is very greatly increased The entire stock is arranged in eight rooms, six galleries (each 120 feet long), and two large ground-floors, the whole forming as complete an assortment of Bed-room Furniture as they think can possibly be desired.
Every attention is paid to the manufacture of the Cabinet-work, and they have just erected large Workshops on the premises for this purpose, that the manufacture may be under their own immediate care.
Their Bedding trade receives their constant and personal attention, every article being made on the premises
They particularly call attention to their Patent Spring Mattress, the Sommier Patent Portable. It is portable, durable, and elastic, and lower in price than the Spring Mattress.
HEAL & SON'S ILLUSTRATED CATALOGUE of Bedsteads, Bedding and Bed-room Furniture sent free by Post.—196, 197, 198, Tottenham Court road, London.

TO BUILDERS AND OTHERS.
WILLIAM SKETCHLEY would call attention to his SAWING, PLANING, and MOULDING TABLE. It is adapted for sawing 12-inch deep and 9 inch 14-inch deep, and moulding 5 inch wide. It is also fitted with drunken saw and slide cramp for tenoning, &c. &c. The price of this to prepare 9-inch stuff is £70. It can be supplied to any saw table, and will prepare flooring in a first-class manner.—For further particulars apply to WILLIAM SKETCHLEY, Great George-street, Weymouth.

TO RAILWAY CONTRACTORS, EXCAVATORS, BUILDERS, and OTHERS.—TO BE DISPOSED OF, equal to new, a SET of Three-throw 6-inch Cylinder Barrel FORCE-PUMPS, 16-inch stroke, with metal buckets and valves, copper rods, slings, crank, plummer blocks, a pair of wood and iron gear driving wheels and brackets &c. with or without suction and rising main. Price £70. Also a PAIR of 5-inch FORCE-PUMPS, with side frames, bob-crank, buckets and rods, &c.—For particulars, apply at No. 17, Cromer-street, Grainger-road, Bermondsey.

WINDOW-BLIND MATERIALS.—H. & J. DOVE, 31, Ludgate-hill, London, E.C. SUPPLY the TRADE with every description of MATERIAL for INSIDE and OUTSIDE WINDOW-BLINDS, comprising Sun-Blind Ticks, Linen, Hollands, Buff, Green, and White Unbuns; Greek, Crimson, and Blue Taunnies; Fancy Printed Blinds; Cords, Tassels, and all kinds of Webs and Lines for Venetian Blinds; also every quality of Patent Sash Lines.—Price lists on application. Established A.D. 1797.

TO BE SOLD, a PIPE-MACHINE, Spencer's patent (patent expired), with all dies, from 3 inches to 15 inches, complete.—Address, A. B. office of "The Builder."

TO BE SOLD, STEAM TRAVELLING and ORDINARY CRANES.—For particulars, apply to J. & HENRY PATTESON, Contractors, Manchester.

SELF-COILING
REVOLVING
SHUTTERS,
IN STEEL, IRON, & WOOD,
3s. 6d. 3s. 2s. 6d.
PER FOOT.

CLARK & CO.
SOLE PATENTEES
OF
SELF-COILING SHUTTERS,
Which do not require Balance Weights or Machinery of any description,

Thousands of which are in daily use, being worked by Hand with the greatest facility. The WOOD SHUTTERS are lined with Steel Bands, affording every security. The STEEL SHUTTERS are in

ONE SHEET,

and from the hardness of material, and their construction, will defy the efforts of the most experienced Burglar, and afford an effectual protection against Fire.

THESE SHUTTERS RECEIVED
THE ONLY PRIZE
AWARDED AT THE
GREAT EXHIBITION, 1862.

Nine of CLARK'S Patent Self-coiling Steel Shutters have been fixed at MESSRS. MORLEY'S new Premises in Wood-street, the scene of the late

GREAT FIRE IN THE CITY,

the Revolving Shutters previously fixed having been removed.

Messrs. CLARK & COMPY. are erecting Shutters of immense size at the

THEATRE ROYAL, GLASGOW,

which was recently destroyed by Fire, as a safeguard for the future.

Their Shutters are also in daily use at all the principal Banks, Jewellers' Shops, Public Offices, Theatres, and Music Halls, in the United Kingdom. Testimonials of their great efficiency and ease in action received from many eminent Firms and Government Offices forwarded free, also Prospectuses, Estimates, and every information.

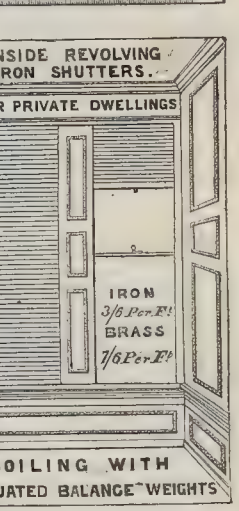
They also beg to call attention to their
NEW MANUFACTURE OF METALLINE TILES,
6 inches by 1 inch thick, in truck-loads of 4,000, from 63s. per 1,000 cash, delivered to Nine Elms. A 20, malt kiln, ridge, gutter, and hip tiles, buff, glazed, and fire-bricks Specimens may be seen, and every information obtained, at the Offices, No. 33, Parliament-street S.W.; also at the Architectural Exhibition, 9, Conduit-street, Regent-street; Kensington Museum; the Fine Arts' Academy; and the Crystal Palace, Sydenham.—Address, The Architectural Pottery Company, 36, Parliament-street, S.W.; or Poole, Dorset.

PRIZE MEDAL TO MAW & CO. INTERNATIONAL EXHIBITION, 1862.
IMPERISHABLE TESSELATED
PAVEMENTS, combining a highly decorative and economical substitute for ordinary floors of their perishable coverings. MAW & CO.'S Pattern-book, designed by M. Digby Wyatt, esq. together with special design and estimate of cost adapted to any given dimensions of hall, passage, conservatory, verandah, frieze, &c. will be sent on application to Benthall Works, Broseley Salop.
May be seen at the Exhibition of Building Inventions, &c. now open at the Galleries of the Architectural Exhibition, 9, Conduit-street, free.
London Agents—W. B. SIMPSON & SONS, 456, West Strand, who have on view a great variety of Specimens of the Pavements.

PEAKE'S TERRO-METALLIC TILES,
PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21 Wharf Macclesfield-street North, City-road Basin, N. Thdly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor. and 3rdly, that the "Reports of the Juries," page 581, of the Great Exhibition, 1851, note the grant of a First-class Medal and rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

TWO PRIZE MEDALS AT THE INTERNATIONAL EXHIBITION.
MAGNUS'S ENAMELLED SLATE
obtained the Medal of the Society of Arts; the Prize Medal at the Great Exhibition, 1851; Two First class Medals at the Paris Exhibition; and Two Prize Medals at the International Exhibition of 1862.
To obviate imitations of this beautiful material are being palmed upon the public, Architects are therefore requested to see that the name of "MAGNUS" is upon each article.
Chimney pieces, Billiard-tables, Table-tops, Baths, Wall-linings &c. a New Illustrated Catalogue of which can be had at the Pimlico Slate Works, 39 and 40, Upper Belgrave-place, Pimlico, S.W.

BURHAM BRICK, LIME, and CEMENT
COMPANY, BURHAM WHARF, BELVIDERE-ROAD, LAMBETH.—The public are informed that the Company have taken the above Premises, and have ON SALE, GAULT BRICKS, TILES, POTTERY, DRAIN-PIPES, GREY STONE LIME, PORTLAND and other CEMENTS, and BUILDING MATERIALS of all descriptions. Architects and Builders are respectfully informed that goods of any pattern or design can be manufactured at the Company's Works, erected on the banks of the Medway by the late Thomas Cubitt. They would also call the attention of the public to the very superior quality of their Portland Cement.



BARROW LIME.—JOHN ELLIS & SONS,
Leicester, are now prepared to DELIVER the best FRESH BURNT BARROW LIME, at the Syston Station of the Midland Railway, direct from the kilns, at 20s. per ton.—The Barrow Lime is well known as a very superior Hydraulic Lime from the Blue Lias stone. March, 1864.

PARIAN CEMENT for INSIDE WORK.
With this Material Houses may be finished and occupied in one-fourth the usual time, as Parian Stucco may be painted or papered within forty-eight hours. A finer quality produces a beautiful and hard scagliola imitation of marble.—Manufacturers, FRANCIS, BROTHERS, & POTT, Nine Elms, London.

PORTLAND CEMENT.

This material, submitted to the severest tests by the English and French Governments for hydraulic and other works, manufactured by

FRANCIS, BROTHERS, & POTT,

NINE ELMS, VAUXHALL, AND MEDINA MILLS, NEWPORT, ISLE OF WIGHT.

ROMAN, MEDINA, PARIAN, AND OTHER CEMENTS.

HALL, BROTHERS,

LATE OF

MERSTHAM GREY STONE LIME WORKS,

Resigned the above works on the 25th of March, at the expiration of their Lease, in consequence of being unable to effect such terms for a renewal as they could accept. The works have been used by them for nearly forty years, during which time a considerable business has been established; and now to give them up so unexpectedly, with only a few weeks' notice, without any remuneration for the trade, has caused to them great loss and disappointment.

Anxious that their customers should not be inconvenienced by the sudden change, HALL, BROTHERS, have arranged for them to be supplied in LONDON, and by Railways from these Works, upon the terms then existing, until the 24th JUNE, by Mr. W. PETERS.

They wish to remind their customers and the public that their business in Grey-stone and Chalk Lime, Cement, Slates, Sand, Coal, &c., is carried on as usual at Croydon, Coulsdon, Redhill, and Reigate; and, should they be successful in obtaining premises for the manufacture of Grey-stone Lime, they will resume their trade in London and on the Railways, and hope for a continuance of that support they have hitherto so generously afforded them.—Address,

HALL, BROTHERS, CROYDON, OR REDHILL, SURREY.

PORTLAND CEMENT WORKS,

EAST GREENWICH,

EDWIN HOLLICK,

MANUFACTURER OF PORTLAND CEMENT, OF THE BEST QUALITY ONLY, FOR THE ENGLISH AND FOREIGN MARKETS. VESSELS LOADED ALONGSIDE.

ESTABLISHED 1852.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead It does not change colour with the London atmosphere.

ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. Whether sold under the name of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.

CHEAPNESS.—Not only is it the per per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT"

THOMAS HUBBUCK & SON,

WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

COLES, SHADBOLT, & CO.

PORTLAND CEMENT WORKS,

NORTHFLEET, KENT.

ROBINS & CO.

To whom the Prize Medal was awarded in 1851, are prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all purposes to which cement is applicable.—Orders received at Great Scotland yard, Whitehall, and at the Works.

HYDRAULIC LIME and ROMAN

CEMENT, manufactured by LLOYD JONES & CO. Halkin Works, Holywell, Flintshire. The Halkin Hydraulic Lime is the same as used in the construction of the Liverpool Docks, Manchester, and various waterworks, collieries, and mines throughout the country, being so long celebrated for its strong cementitious and connecting powers for masonry in water. Can be supplied by rail or water to any part of the kingdom, either in lump (loose), or ground, and in barrels and bags. The limestone can be had in full cargoes, also their cement in barrels, which is of a very superior quality and warranted pure. Orders to be accompanied by a banker's reference. Apply at the Works; or to E. & W. AARON, Agents, 68, South John-street, Liverpool.

PURE HYDRAULIC LIME, Manufactured
